Hungary water - -	316 $\frac{1}{8}$
Rum - - -	327,703
Uſquebagh - -	154 $\frac{1}{2}$
Cyder ſpirits - -	12,527
Total number of gallons —	11,205,627

The prodigious quantity of theſe deſtructive ſpirits demonſtrate the exceſſive, ſcandalous, and wicked practice of dram drinking, which is generally the bane of all thoſe that follow it: however, theſe bewitching liquors have ſo far got the aſcendant over their votaries, that they ſtrenuouſly plead in their behalf, to indulge themſelves, and allure others to the like practice, by urging, that many men who have been hard drinkers for the ſpace of 30 or 40 years enjoy a good ſtate of health, and are as vigorous at the age of 60 or 70 as thoſe who have lived temperate. That this is a very deceitful plea is manifeſt; for, inſtead of living in that practice for ſo long a term of years, moſt are cut off in the bloom of their youth; therefore, to prevent people from being miſled by ſuch falſe and monſtrous allegations, it will be neceſſary to acquaint them, that all ſuch as have lived in that debauched way, for many years, are indebted to a vigorous conſtitution, which, inſtead of bringing to the ages of 60 or 70 years, would probably, with good management, have brought them in health to the age of 100 and upwards.

By the 11th of Geo. I. arrack, rum, brandy, ſpirits, or ſtrong-waters, or other exciſeable liquors, on board a ſhip within the limits of any port of Great Britain, or found unſhipping or unſhipped before entry, may be ſearched for, and ſeized, together with the package, by the officers of exciſe, in like manner as by the officers of the cuſtoms.

Permits granted for the removal, not returned, or the goods ſent away within the time limited, the penalty treble the value.

Brandy, rum, or other ſpirits, offered to ſale by any perſon without a permit, or by any hawker, &c. with a permit; the perſon to whom it is offered may ſeize and carry it to the next warehouſe belonging to the cuſtoms or exciſe, and bring the perſon offering the ſame before any juſtice of the peace, to be committed to priſon, and proſecuted for the penalties incurred for ſuch offence.

Foreign brandy, rum, or other ſpirits in casks under 60 gallons, except for the uſe of the ſeamen two gallons each, found in any ſhip or veſſel arrived from foreign parts, at anchor, hovering within the limits of any port, or within two leagues of the ſhore, and not proceeding on her voyage, unleſs in caſe of unavoidable neceſſity and diſtreſs of weather, notice whereof muſt be given to the collector or chief officer of the port upon the ſhip's arrival, is forfeited with the boxes, casks, and other package, or the value thereof.

By the ſtatute of the 3d of Geo. I. ſpirits. or low wines, by ſea, coaſtwiſe, without a certificate from the officer of exciſe where diſtilled, are forfeited: to be ſued for as any other forfeiture, by the laws of exciſe.

By the ſtatute of the 5th and 9th of Geo. I. the 2d, 9th, 15th and 16th of George II. rum, imported in caſks not containing 60 gallons at the leaſt, except for the ſeamens uſe, are forfeited, or the value: but if it appears to the ſatisfaction of the principal officers of the cuſtoms, to be imported without fraud or concealment, may be admitted to entry.

Rum or ſpirits of the Britiſh ſugar plantations, imported directed into Great Britain, may, on entry, and before payment of the duty of exciſe, be landed and put into warehouſes, provided by the proprietor or importer, and approved of by the commiſſioners of exciſe, under the joint locks of the proprietor and ware-houſe-keeper; ſecurity being firſt given to pay the ſaid duty, according to the gauge at landing, as ſoon as ſuch rum or ſpirits ſhall be ſold, or at the end of ſix months, if they ſhall not be then ſold.

If the duty is not paid at the expiration of the ſaid ſix months, the commiſſioners may cauſe ſuch rum or ſpirits to be ſold by auction; and out of the produce diſcharge the duty, and all expences, and pay the ſurplus if any, to the proprietor.

If landed without being entered at the cuſtom-houſe, and with the collector of exciſe, or without a warrant from the proper officers, or without the preſence of an exciſe-officer, forfeited; one moiety to his majeſty, the other to ſuch perſon as ſhall ſeize, inform, or ſue for the ſame.

Rum may from time to time be delivered out of ſuch warehouſes, but not in leſs quantities than one caſk, containing at leaſt 20 gallons, unleſs it was for the uſe of the ſeamen in the voyage, on paying the duty, and producing to the warehouſe-keeper, and officer appointed to attend, a warrant or certificate from the collector, certifying ſuch payment.

By the ſtatute of the 24th of Geo. II. and the ſeveral acts therein mentioned, the reſpective duties on ſpirituous liquors are aſcertained, and on licences for retailing the ſame.

Bounty on Britiſh SPIRITS. By the ſtatute of the 6th of Geo. II. for every ton of ſpirits drawn from Barley, malt, or other corn, there ſhall be paid to the exporter, by the commiſſioners of the cuſtoms, or the proper officers belonging to them, when barley is at 14 s. *per* quarter, or under, on ſuch proof of exportation thereof as is directed by the firſt of William and Mary for encouraging the exportation of corn, out of the duties liable to the payment of the bounties on corn exported, the ſum of 1 l. 10 s. and ſo in proportion for a greater or leſſer quantity.

Drawback on the exciſe on SPIRITS drawn from corn in Great Britain, without any mixture of other materials.

Upon oath before two or more commiſſioners of exciſe, or juſtices of the peace, of the place from whence ſuch ſpirits are intended to be exported, that the ſame are drawn from corn in Great Britain, without any mixture with any other materials, and that the duties are duly entered and paid, and that the ſame are exported for merchandiſe to be ſent beyond the ſeas, and upon producing a certificate under the hands of the officers of exciſe, for the port or place where ſuch ſpirits were ſhipped, of the quantity ſo ſhipped, and that it was in the preſence of ſuch officer; the exporter is to be allowed or paid back by the commiſſioners of the exciſe, or the collector of the port of exportation,

portation, 4 l. 18 s. *per* ton, and ſo in proportion for a greater or leſſer quantity, in full of all drawbacks and bounties that can be made for the ſame, except the bounty of 1 l. 10 s. *per* ton payable at the cuſtom-houſe by the 6th of Geo. II.

SPITHEAD. A road between Portſmouth and the iſle of Wight, where the royal navy of Great Britain frequently rendezvous.

SPITSBERGEN. See *Denmark*.

SPLICE, at ſea. They ſay a cable or rope is ſpliced, when the ends of two pieces being untwiſted, the ſeveral ſtrands are wrought into one another by a fidd. Alſo, when an eye is to be made at the ends of a rope, the ends of the ſtrands are, by a fidd, drawn into the ends of the other rope ſtrands; and this is called a ſplice.

To SPLICE, among gardeners, is to graft the top of one tree into the ſtock of another, by cutting them ſloping and faſtening them together.

SPODIUM, in pharmacy, a kind of metalline calx, or aſhes, eſteemed cardiac, and by ſome held to have the ſame virtues with coral; being a metalline powder, very like, both in origin and uſe, to tutia and pompholyx; only heavier than either.

The ſpodium of the Arabian phyſicians, as Avicenna and others, was made of the burnt roots of ruſhes and reeds. Some moderns alſo make a ſpodium of ivory burnt, and calcined to a whiteneſs. It is ſometimes counterfeited by burning bullocks or dogs bones; but theſe are of no value.

SPONGE. See *Spunge*.

SPOONING, or *Spooming*, in the ſea language. When a ſhip being under ſail, in a ſtorm at ſea, cannot bear it; but is forced to put right before the wind; the ſeamen ſay, ſhe ſpoons. And in ſuch a caſe, as there is danger leſt ſhe ſhould bring her maſts by the board, with her rolling about, or feel under water, and ſo founder, they uſually ſet up the fore-ſail to make her go the ſteadier, eſpeclally if there be ſea-room enough: this they call ſpooning with the fore-ſail.

SPORADES. A name given to ſome of the iſlands in the Turkiſh Archipelago, between Aſia and the iſland of Candia, on account of their irregular ſituation.

SPOUT, or *Water-ſpout*, in natural hiſtory, an extraordinary meteor, or appearance at ſea, and ſometimes at land, very dangerous to ſhips, and oftenеſt obſerved in hot dry weather; called by the Latins *typho*, and *ſipho*; by the French *trompe*.

Its firſt appearance is in form of a deep cloud, the upper part whereof is white, and the lower black. From the lower part of this cloud hangs, or rather falls down, what we properly call the ſpout, in manner of a conical tube, biggeſt at top. Under this tube is alſo a boiling, or flying up of the water of the ſea in a jet d'eau. For ſome yards above the ſurface of the ſea, the water ſtands as a column or pillar: from the extremity whereof it ſpreads and goes off as in a kind of ſmoak. Frequently the cone deſcends ſo low, as to touch the middle of this column, and continue for ſome time contiguous to it; tho' ſometimes it only points to it, at ſome diſtance, either in a perpendicular or oblique line.

Frequently it is ſcarce diſtinguiſhable whether the cone or the column appear firſt, both appearing all of a ſudden againſt each other. But ſometimes the water boils up from the ſea to a great height, without any appearance of a ſpout pointing to it either perpendicularly or obliquely. Indeed, generally, the boiling, or flying up of the water has the priority; this always preceding its being formed into a column. Generally the cone does not appear hollow, till towards the end; when the ſea-water is violently thrown up along its middle, as ſmoak up a chimney. Soon after this, the ſpout or canal breaks and diſappears; the boiling up of the water, and even the pillar, continuing to the laſt, and for ſome time afterwards; ſometimes alſo till the ſpout form itſelf again, and appear a new; which it frequently does ſeveral times in a quarter of an hour.

In Pliny's time, the ſeamen uſed to pour vinegar into the ſea, to aſſuage and lay the ſpout, when it approached them: our modern ſeamen think to keep it off, by making a noiſe with filing and ſcratching violently on the deck; or by diſcharging great guns to diſperſe it.

SPRAT. A ſmall eatable ſea-fiſh, a ſpecies of the herring kind.

SPRING-*tide*. See *Tide*.

SPROTS. A term in Holland for the Engliſh red herrings.

SPUN-*herb*. See Spun-*herb*.

SPUN-*yarn*, among ſailors, the yarn of untwiſted ropes, whoſe ends are ſcraped and beaten thin, in order to be let into the ends of other ropes, and ſo made long as occaſion ſhall require.

SPUNGE, or *Sponge*. A kind of ſea-fungus, or muſhroom, found adhering to rocks and ſhells on the ſea ſhore.

The ancients diſtinguiſhed two kinds, male and female; but the moderns make only one, which, however, they diſtinguiſh with regard to its texture, into coarſe and fine. Naturaliſts have been embaraſſed in all ages, whether to range ſpunge in the animal, mineral, or vegetable family: ſome would have it a concretion formed of the ſea-mud; and others an animal, at leaſt a zoophyte, from its motion of contraction and dilatation.

The greateſt part of our ſpunges are brought from the Mediterranean, eſpecially from Nicaria, an iſland thereof, near the coaſt of Aſia. The diving or fiſhing for ſpunges is there reckoned the top qualification in youth, who all get the better wives as they excel more herein: to this proof the maids refer the preference among ſeveral ſuitors, placing themſelves on the brink of the ſea, to be witneſſes of the addreſs of each, and giving themſelves as a prize to the conqueror. See *Diving*.

The fine, or ſmall ſpunges are the moſt eſteemed; and uſually come from Conſtantinople. Their goodneſs conſiſts in being very white, light, and the holes ſmall and cloſe: the larger and coarſer come from the coaſts of Barbary, particularly Tunis and Algier. The ſpunge is a very uſeful matter in the arts. In phyſic, it ſerves to foment parts inflamed. By analyſis, it yields a deal of volatile, ſharp ſalts, like other ſea-plants. Taken inwardly it choaks; and is for that reaſon cut ſmall, and fried, or dipped in honey, and given to quadrupeds to kill them; which it ſeldom fails to do, by ſwelling and preventing the paſſage of the food into the inteſtines. In ſpunges are found a kind of ſtones, called cyſtiolithi, held good for the worms in young children, and taken in powder.

Pyrotechnical SPUNGES, are made of the large muſhrooms, or fungous excreſcencies growing on old oaks, aſhes, and firs; which, being boiled in common water, then dried, and well beaten, are put into a ſtrong lie, prepared with ſalt-petre, and again dried in an oven. Theſe make the black match or tinder brought from Germany, uſed to receive and ſuſtain the fire ſtruck upon it from a flint and ſteel.

SPUTER. A white hard metal, not known in Europe till introduced by the Dutch. Some give it a place among half metals; becauſe, tho' it reddens before it melts, as ſilver, copper, and other metals which withſtand ignition, yet it is no way ductile, and cannot be employed but in founders works.

SQUADRON *of ſhips*. A diviſion or part of a fleet, commanded by a vice or rear admiral, or ſome other commander or commodore. See *Fleet*, *Navy*, and *Admiral*.

The number of ſhips in a ſquadron is not fixed: a ſmall number of veſſels, if they be in a body, and have the ſame commander, may make a ſquadron. If there be a great number, they are uſually divided into three ſquadrons: and if the ſquadrons be numerous, each ſquadron is divided into three diviſions, diſtinguiſhed by their flags and colours,

SQUARE *meaſure*. See *Meaſure*.

SQUINANTI. The beſt Egyptian flax ſold at Cairo.

STACTE, in pharmacy, a fatty reſinous liquid matter, drawn from freſh myrrh, pounded, or preſſed with a little water. See *Myrrh*.

This liquor is very odoriferous, and held very precious, making alone the perfume called by Dioſcorides ſtacte, and which ſmells finely, tho' very bitter to the taſte. There is none of it now but what is ſophiſticated; and what the apothecaries call ſtacte is no more than liquid ſtorax. See *Storax*.

STADTHOLDER. A governor, or lieutenant of a province in the United Netherlands, particularly that of Holland; where the word is moſt uſed, by reaſon of the ſuperior importance of the government of that province; which office is now hereditary in both the male and female branch of the houſe of Orange over the whole United Provinces.

STAFFENGER. A town of Norway. See *Denmark*.

STALACTITES, *Stalagmites*, or *Stagonites*, in natural hiſtory. A ſtony, ſparry ſort of icicles, which hang down from the arches or tops of grottoes and ſubterranean caverns; as alſo from the roofs of buildings, and capitals of pillars of ſuch places as are built over vaults or hot ſprings.

Of this kind are the ſal, alumen, vitriolum ſtalactjcum, the minera ferri ſtalactica, the vitriolum capillare, the alumen capillare, and others.

STALIMENE. An iſland in the Turkiſh Archipelago. See *Lemnos*.

STALLAGE. The rent or money paid for the uſe of a ſtall in a fair, market, or inn.

STAMP. The impreſſion, or mark, of a ſeal, hammer, &c. upon any thing, to know or diſtinguiſh it from all others of the ſame kind.

Stamp-duties are taxes impoſed upon all writings and proceedings in the law, eccleſiaſtical courts, or notorial acts; which were firſt granted by the ſtatute of the 5th and 6th of William and Mary; whereby commiſſioners were appointed, who were empowered to appoint inferior officers for ſtamping of vellom, parchment, and paper. Theſe duties were augmented by the ſtatute of the 9th and 10th of William III. and, by the ſtatute of the 9th of Queen Anne, this tax was extended to certificates or debentures for drawing back duties on exporting goods; as alſo on bills of lading for exports, as well as on almanacks, and licences for retailing wines and exciſable liquors. By the ſtatute of the 10th of Queen Anne, this tax was further extended to ſurrenders and admittances to copyhold eſtates, as well as upon cards and dice, pamphlets, and advertiſements in the public news-papers. By the 10th of Queen Anne, an additional duty was laid on ſtamping policies of inſurance; and, by the 12th, a duty was laid on the transfers of ſtock in any company, pardons, grants, diſpenſations, admiſſions of phyſicians, attorneys, &c. appeals from the courts of admiralty, inſtitutions, and letters of mart. See *Apprentices*.

The annual revenue of the ſtamp-duties amounts to about 94,000 l. and the office is kept in Lincoln's-inn.

STAMPALIA. An iſland of the Turkiſh Archipelago, ſituated in 26 deg. 30 min. of E. lon. and 52 deg. 40 min. of N. lat. 60 miles weſt of Rhodes, about 50 miles in circumference, and inhabited by Greek Chriſtians.

STAMPING-*mill*. See *Mill*.

STANDARD, in commerce. The original of a weight, meaſure, or coin, committed to the keeping of the magiſtrate, or depoſited in ſome public place, to regulate, adjuſt, and try the weights uſed by particular perſons in traffic. See *Weight*, and *Meaſure*.

The juſtneſs of weights and meaſures is of ſuch conſequence to the ſecurity and good order of trade, that there is no civiliſed nation, but what makes it part of their policy to preſerve the equality thereof by means of ſtandards. The Romans and Jews even ſeem to have affixed a kind of religious worſhip to theſe ſtandards, by laying them up in their temples, as it were under the eye of their deities.

The ſtandards of weights and meaſures in England are appointed, by magna charta, to be kept in the exchequer by a proper officer, called the clerk or comptroller of the market. The ſtandard of gold coin is 22 carats of fine gold, and 2 carats of alloy, in the pound weight troy; and the French, Spaniſh, and Flemiſh gold are nearly of the ſame fineneſs. The pound weight is cut into 44 parts and a half, each current for 21 ſhillings.

The ſtandard of ſilver is 11 oz. 2 dwt. of ſilver, and 18 dwt. of alloy of copper. Whether gold or ſilver be above or below ſtandard, is found by aſſaying. See *Aſſay*.

STANNARIES. The mines and works where tin is dug and purified, as in Cornwall and Devonſhire. See *Tin*.

There are four courts of ſtannaries in Devonſhire, and as many in Cornwall; ſeveral liberties being granted to them, by ſeveral acts of parliament in the time of Edward I. though ſomewhat abridged under Edward III. and by the 17th of Charles I.

STAPLE, primarily ſignifies a public place, or market, where merchants and tradeſmen are obliged to bring their goods to be bought by the people; as the Greve, or the places along the Seine, for the wines and corns, at Paris; whither the merchants of other ports are obliged to bring thoſe commodities. See *Market*.

STAPLE, alſo ſignifies a city or town, where merchants jointly agree to carry certain commodities, as wool, cloth, lead, tin, or the like, in order to their being more commodiouſly ſold by the great.

In England, ſtaples were ſettled and appointed to be conſtantly kept at York, Lincoln, Newcaſtle upon Tyne, Norwich, Weſtminſter, Canterbury, Chicheſter, Wincheſter, Exeter, and Briſtol; to which places merchants and traders were to carry goods to ſell. The ſtaple-commodities of England were chiefly wool, leather, cloth, tin, and lead; though by ſtaple-goods is now meant any proper ſaleable commodity, not eaſily ſubject to periſh.

The principal Dutch ſtaples now exiſting are, Amſterdam, for all goods from the Eaſt Indies, Spain, the Mediterranean, and the Baltic; Fluſhing, for thoſe of the Weſt Indies; Middleburgh, for French wines; Dort, for Rheniſh wines and Engliſh cloth; and Verre, in Zealand, for Scotch merchandiſes.

The ſtaples in the Levant, called by the French *eſchelles*, that is, ſcales, are ſuch cities where the Engliſh, French, Dutch, and Italians, have factors, conſu's, and magazines, and whither they ſend veſſels regularly every year. The principal of theſe are Smyrna, Alexandretta, Aleppo, Seyda, Cyprus, Alexandria, Cairo, Tunis, Algiers, Tripoli, the Morea, Candia, and the iſlands of the Archipelago.

STAPLE-*merchants*, or *Merchants of the ſtaple*, were the 21 company of merchants incorporated in England by Edw. III. who, ſettling their chief factory at Middleburgh in Zealand, ſent thither great quantities of leather, woolfells, lead, tin, butter, cheeſe, and cloth; but the ſtaple, in the year 1389, being removed to Calais, it was ſoon after, in the year 1391, removed from thence to England.

Statute STAPLE. See *Statute*-ſtaple.

STARBOARD, denotes the right-hand-ſide of a ſhip, as larboard does the left. See *Larboard*.

They ſay, ſtarboard the helm, or helm a ſtarboard, when the man at the helm ſhould put it to the right-ſide of the ſhip.

STARCH. A fecula, or ſediment, found at the bottom of veſſels, wherein wheat has been ſteeped in water; of which fecula, after ſeparating the bran from it, by paſſing it through ſieves, they form a kind of loaves; which, being dried in the ſun, or an oven, is afterwards broke into little pieces, and ſo ſold.

The beſt is white, ſoft, and friable, eaſily broke into powder. Such as require very fine ſtarch, do not content themſelves, like the ſtarchmen, with refuſe wheat, but uſe the fineſt grain.

Starch is uſed along with ſmalt, or blue ſtone, to ſtiffen and clear linnen; and the powder thereof to whiten hair. It is alſo uſed by dyers to diſpoſe their ſtuffs to take colours the better.

By an act paſſed in the 10th Anne, foreign ſtarch ſhipped for exportation, and afterwards relanded, is forfeited, or the value, beſides the penalty of the bond; or hair-powder found in any ſhip, waggon, &c. is ſeizable by officers of exciſe or cuſtom, upon ſuſpicion of its having been privately made, or clandeſtinely imported, or exported and relanded again after the duty hath been repaid; and, within ten days after ſeizure, the officer is to exhibit an information before three commiſſioners of exciſe, or two juſtices of the peace.

By an act paſſed in the 4th of George II. the perſon in whoſe poſſeſſion ſtarch is found, muſt make appear that the duty has been paid for the ſame, upon forfeiture of the goods, with horſes and package, and 5 l. for every 100 lb.

Suſpected to be privately making or concealed, may be

ſearched

ſearched for by officers of exciſe or cuſtoms, by day or by night; but if by night, in the preſence of a peace-officer, by warrant from the commiſſioners of exciſe, or a juſtice of the peace.

Found privately making or concealed, is forfeited, with all materials, and things in which it is contained; and the perſon privately making, or in whoſe poſſeſſion it is found, upon failure of proof that the duty has been paid, forfeits 50 l. and for obſtructing the officers 50 l.

Mr. Brooks has fully laid open the bad effects of the preſent high duties upon ſtarch.

The duty ariſing upon ſtarch in the years

1716	was 21,000 l.
1717, 1718, 1719, 1720	19,000 l.
1745	11,000 l.
1746, 1747, 1748, 1749	10,000 l.

A proper regulation of the ſtarch-duty will be attended with the following good effects; as ſhewn by Mr. Brooks, in theſe words:

1. As all the farmers, eſpecially ſuch as live in inland countries, will have a greater opportunity of diſpoſing to the ſtarchmakers, at all times, ſuch bunty or ſmutty wheats, which, through the inclemency of the ſeaſon, as well as many other cauſes, very often is produced in many parts of this kingdom; ſuch corn being unfit for the merchant to buy for exportation, or lay up in ſtore. Therefore I would obſerve, that the greater conſumption of ſtarch will give the makers thereof an opportunity at all times to relieve the farmers, by taking from them all ſuch bad, cold, bunty wheat ſo far ſpoken of, at a fair market-price; as at any time the farmers ſhall become poſſeſſed of.

2. The next benefit which may accrue to the public from a greater conſumption of ſtarch, will be from an increaſe of the breed of ſwine, which are nouriſhed and fed by the ſtarchmakers offal; no other branch, where the conſumption of wheat is concerned, producing food of equal goodneſs.

3. This additional conſumption propoſed, may give another advantage, by employing a greater number of hands, as trade increaſes, which may be a means to repair and put in order ſuch ſtarch-offices or houſes in all inland countries as formerly have been employed, before the heavy duty was laid upon the ſame. This commodity was then made uſe of by many traders and artificers; ſtarch at that time being uſed in ſtiffening of buckrams, as well as by the whiteſters in whitening their threads and cloth, &c. Alſo by plaiſterers and whitewaſhers of churches or houſes, &c. it being valued for its beautiful colour, as well as laſting quality. Beſides, a great conſumption was made by all trunk and box-makers, upholſterers, ſadlers, breeches-makers, book-binders, &c. who then made up their paſte of ſtarch; which alſo added, at that time, to the conſumption thereof: but, after the duty was laid upon ſtarch, theſe tradeſmen were not compelled, like the barbers, to uſe that commodity, and the dearneſs of it prevented them from uſing it, which was the reaſon of the firſt decay in the ſtarch-trade. There are other reaſons for the decay of the ſaid trade; the firſt of which was the giving encouragement to the trade and importation of French cambrics, after the duty laid upon ſtarch, which reduced the conſumption of muſlins, and other Indian cloths, as required the uſe of ſtarch in getting up the ſame, which the wear of cambrics totally prevented. The next was in the firſt year after the act commenced, that the wheat in this kingdom advanced from 6 s. to 8 s. the buſhel; which ſo much advanced the price of ſtarch, with the heavy duty upon the ſame, as rendered it impoſſible for the barbers and perukemakers to make uſe of powder according to act of parliament, who might have become the greateſt conſumers of the ſaid article, at a proper duty: but, as the act now ſtands, they have been obliged to have recourſe to fine flour, &c. not out of any diſobedience to the laws, but from ſelf-preſervation, that hindered 18 parts of the trade out of 20, from being able to comply with the uſe of powder, according to the act aforeſaid; all which brought the trade and duty to ſuch a low ebb, as might no doubt give the firſt riſe to that clauſe made in the 4th year of his preſent Majeſty's reign; under which clauſe ſuch conſtraints and heavy penalties have been levied, as have been the ruin of many families.

The great decay of the ſtarch-trade, and the conſequent decreaſe of that branch of the revenue ariſing therefrom, which was appropriated by parliament to ſundry national uſes, has, for a long time paſt, been matter of great concern, both to the government and ſtarchmakers, as well as likewiſe greatly affecting the farmers, landholders, and ſtockholders, in general. But this has not been all the matter of complaint; for, notwithſtanding the dearneſs of hair-powder, ariſing from the high duty laid upon ſtarch, yet, by an act paſſed in the 4th year of his preſent Majeſty's reign, all barbers and perukemakers became obliged to uſe the ſame, on the penalty of 20 l. Beſides, the greateſt part of theſe traders having large families, and being likewiſe neceſſitated by the lowneſs of the prices they receive, and with the over and above attendance on their cuſtomers, which the alteration of the trade has laid them under, to what they were obliged before the ſaid duty was laid on, have been rendered unable hitherto to comply with the ſaid act, though never ſo well inclined; and conſequently multitudes of them have been fined and impriſoned, when at the ſame time the makers of ſophiſticated hair-powder have eſcaped puniſhment by working privately.

Now, by the aforeſaid act, all makers of hair-powder are to make true entries at the exciſe-office of their reſpective ſhops, workhouſes, or other places of making of hair-powder; and the officers appointed to inſpect them, never, without ſuſpicion or particular information, proceed to examine or ſearch further than ſuch places entered. But, for want of ſuch regulation with regard to the barbers places of working, all parts of their houſes are liable to be ſearched: and though flour is not ſpecified in the act aforeſaid, as an ingredient for which the powder-makers are ſubject to penalty, or even to be ſearched for by the officers; yet, as it is conſtructed as ſuch, when found in the cuſtody of the barber, even in his kitchen or buttery, he is liable to pay the penalty of 20 l. for the ſame; although the makers of hair-powder are only ſubject to half the penalty, for having other ſophiſticated ingredients found in their working-places.

Theſe evils having ſeveral times been attempted to be remedied, but without ſucceſs, induced Mr. Brooks, in 1751, to lay ſome thoughts thereon before the public, in a ſmall eſſay then publiſhed, intitled, *A ſhort treatiſe for reducing the duty on ſtarch*; which being read, and duly conſidered by the fraternity of barbers, perukemakers, ſtarch and powder makers, to whom it was addreſſed, occaſioned a memorial to be preſented to the lords commiſſioners of his Majeſty's treaſury, by the barbers and peruke-makers of the cities of London and Weſtminſter, bills of mortality, and places adjacent, in behalf of themſelves and their brethren, ſetting forth their grievances, and humbly praying for redreſs; when, after due conſideration of the ſaid memorial, by the lords of the treaſury, their lordſhips were pleaſed to refer the ſame to the honourable the commiſſioners of exciſe, who thereupon ordered Mr. John Paterſon, clerk of the company of barbers, and ſolicitor in the cauſe, to lay before them what he had to alledge in favour of the complainants, with regard to the duty on ſtarch; who thereupon ſoon after delivered in the annexed memorial on that head.

To the honourable the commiſſioners of exciſe.

In obedience to your honours command, I take the liberty to lay before you what I had to offer in ſupport of the

the barbers and peruke-makers memorial to the lords commiſſioners of his Majeſty's treaſury, referred to your honours.

1. That the price of ſtarch, before the duty was laid upon it, when wheat was at a medium price, was about 2 d. *per* pound; and now, by reaſon of the ſaid duty, it is about 4 d. halfpenny; which makes an advance upon the conſumer of 125 *per cent.*

2. That the great diſproportion neceſſarily prevents the duty producing ſo much as it otherwiſe would do; as it is a great temptation to one part of the ſubjects to make, import, or uſe ſtarch and ſtarch-powder, for which no duty has been paid; and lays others under a neceſſity of not making uſe of either.

3. That the many frequent convictions on your honours books, of barbers and peruke-makers, will ſhew how ineffectual penalties are to reſtrain the ſhift and evaſions of thoſe whom their own poverty, and the poorneſs of the trade, abſolutely diſable from complying with the law.

4. That ſtarch, and hair-powder made of ſtarch, can be made, and in fact is ſold abroad for three halfpence or 2 d. a pound, even when made of our own wheat, by means of the bounty paid upon the exportation; which being ſo much cheaper than the duty will permit it to be made and ſold for here, occaſions the ſmuggling of vaſt quantities; and ſo not only defrauds the revenue, but robs the nation of a conſiderable manufacture.

5. How much the revenue is defrauded, or at leaſt deprived of, in this article, upon its preſent footing, can only be made appear by a reaſonable eſtimate of what the conſumption either is, or would be, if the temptation or neceſſity above ſtated did not prevent it: for that purpoſe I humbly ſubmit the following calculation to your honours.

	lb.
I compute the barbers and peruke-makers at 40,000 throughout England, and their conſumption of powder, upon an average, at 4 lb. a week; which makes the whole amount *per ann.* to be - -	8,320,000
Then is computed the conſumption of hair-powder in all private families to be 1-3d more, which is - -	2,773,333
Then is computed, that there are 1,200,000 families; and their weekly conſumption of ſtarch, at 2 oz. each, makes *per ann.*	7,800,000
In all	18,893,333
So that the crown loſes the duty upon -	17,333,333
After deduction of the 13,000 l. now annually received upon the duty.	
Which loſs, at the preſent duty of 2 d. *per* lb. amounts to - -	*L.* 144,444
By the two firſt articles of the above calculation, it appears that the conſumption of powder, at 2 d. *per* lb. would amount to -	92,444
Which, at a halfpenny *per* lb. duly collected, is	23,111

That is near double the produce of the preſent whole duty on ſtarch, beſides what might reaſonably be expected from a variety of other trades, *viz.* indico-makers, calico-printers, whiteſters, dyers, ſaddlers, upholſterers, trunk-makers, ſhoe-makers, breeches-makers, glovers, book-binders, paſteboard-box-makers, paper-bag-makers, &c. who now uſe paſte and other ingredients inſtead of ſtarch; which is not only the beſt, but, when the duty is reduced to 1-4th, will be much the cheapeſt commodity they can uſe.

6. That ſtarch, and ſtarch-powder, would be much more generally uſed, as well in private families as by the ſeveral trades above mentioned, if the duty was reduced to one halfpenny *per* pound, for the reaſon before given; becauſe it is intrinſically better, goes farther, and conſequently would, in that caſe, be really cheaper than any thing now made uſe of in its ſtead.

7. That the duty, when ſo reduced, would be more generally paid; becauſe it would be very little, if at all, more than the *extra* expence which neceſſarily attends ſmuggling, and a clandeſtine trade.

8. That experience, in the caſe of tea, pepper, &c. proves the above ſuppoſition to be well grounded: and if your honours will look back to the produce of the duty now in queſtion, you will find how little the revenue was benefited by the increaſe of it, from 1 d. to 2 d. *per* pound.

	L.	*s.*	*d.*
9. That by the above calculation, excluſive of what may be expected from the ſaid other trades, it appears the duty, at one halfpenny *per* pound, is likely to produce *per ann.* - - -	39361	2	2½
Whereas the medium of the laſt ten years, at 2 d. has amounted to no more than	13000	0	0
So that the difference to the revenue yearly would at leaſt be - - -	26361	2	2½

Excluſive of what may be made appear from a more general conſumption.

Laſtly, I hope your honours will conſider the particular hardſhips which the barbers and peruke-makers lie under; as they are the only perſons obliged to uſe powder made of ſtarch, and the inevitable ruin that muſt fall upon them, and their numerous families, unleſs they are ſo happy as to be relieved by the legiſlature. J. P.

The foregoing memorial, previous to its delivery, was approved of and ſigned by a committee of the trade appointed for that purpoſe; conſiſting of the maſter and 3 wardens of the barbers company of London, and 28 of the principal peruke-makers of London and Weſtminſter.

At the time of delivering the above memorial to the honourable board of exciſe, this affair was alſo backed by the following memorial of the ſtarchmakers.

To the honourable the commiſſioners of exciſe,

The humble memorial of the ſtarch-makers, whoſe names are hereunto ſubſcribed,

Sheweth,

That a memorial of the barbers of the cities of London and Weſtminſter, borough of Southwark, and places adjacent, having been lately preſented to the lords of his Majeſty's treaſury, praying to be relieved againſt the inconveniencies which they labour under from the preſent duties upon ſtarch; and the ſame being referred to your honours, we humbly beg leave to repreſent, that the ſaid duties, being more than half the medium price of the ſtarch, have occaſioned great quantities thereof to be made in ſeveral parts of the kingdom, as well as imported from abroad, for which no duties are paid: that the dearneſs of ſtarch, occaſioned by the ſaid high duty, not only tempts and obliges thouſands of barbers and peruke-makers throughout England, to uſe hair-powder made with little, and often without any powder of ſtarch, contrary to the laws; but neceſſitates many other manufacturers, ſuch as indico makers, dyers, calico-printers, buckram ſtiffeners, &c. &c. and private families in general, to uſe infinitely leſs ſtarch than they actually did before the preſent duty was laid, or than they might afford to do, were the ſaid duties reduced, and the price of the ſaid commodity proportionably leſſened.

Your memorialiſts therefore moſt humbly offer it as their opinion, that the lowering the ſaid duties will neceſſarily promote the conſumption of the ſtarch, ſo as to encreaſe this branch of the revenue conſiderably beyond its preſent produce.

Daniel Ponton,
Thomas Gill,
Simon Lemon,
Henry Smith,
Hewton Lucas,
} ſtarch-makers.

Another memorial, to the purport of the foregoing, was preſented at the ſame time to the honourable commiſſioners

ſioners of exciſe, by his Majeſty's perfumers and others, whoſe names are hereunto ſubſcribed.

Mr. Wintle.
Mr. Coulthurſt.
Mrs. Bailey.
Mr. Barnard.
Meſſ. Robarts, ſen. and jun.
Mr. Robarts, at the Poſtern, common-council-man.
Mr. Harwood.
Mr. Willis.
Mr. Bickham.
Mrs. Reynolds, &c.

Upon which the honourable commiſſioners of exciſe were pleaſed to make the following candid report.

The report of the commiſſioners of exciſe, for reducing the duty upon ſtarch.

To the right honourable the lords commiſſioners of his Majeſty's treaſury.

May it pleaſe your lordſhips,

In obedience to your lordſhips order of reference upon the annexed memorial, of barbers and peruke-makers of the cities of London and Weſtminſter, borough of Southwark, and parts adjacent, ſetting forth, that, by an act paſſed in the 4th year of his preſent Majeſty's reign, the makers and ſellers of hair powder, who make any ſuch powder with any other materials than ſtarch, or powder of ſtarch, rice firſt made into ſtarch, and ſweet ſcents only excepted, are made liable to a penalty of 20 l. beſides forfeiture of the powder ſo made; and all barbers and peruke-makers in whoſe cuſtody any ſuch powder is found, are ſubject to a like penalty of 20 l.: that the duties on ſtarch, amounting to 2 d. *per* pound, which is more than double the prime coſt, or intrinſic value thereof, many perſons are tempted to make, ſell, or uſe hair-powder, prepared either wholly or in part of the ſaid prohibited materials; to the great detriment of the revenue, as well as prejudice of the fair trader: that the general decay of the barbers trade, and the poverty of the traders, render it impoſſible for the greater part of them to comply with the intention of the ſaid act, notwithſtanding the aboveſaid penalties have been rigorouſly levied in all caſes that have been diſcovered; and promiſing a reduction of the preſent duties to 1-4th part, that is, one halfpenny *per* pound; which is all ſet forth to anſwer all the intentions of the ſaid memorial.

We humbly certify to your lordſhips, that we have conſidered the ſaid memorial, and alſo the ſeveral papers and computations which the ſaid memorialiſts have laid before us, in ſupport of it: and we are humbly of opinion, that the high duty laid on ſtarch, of 2 d. *per* pound, which is repreſented to us as more than the intrinſic value of the commodity, excluſive of the duty, has been a great temptation to ſtarch-makers to work privately, in order to avoid the paying the duty; and to the barbers to uſe counterfeit powder made without ſtarch, whereby the revenue is greatly prejudiced: that we apprehend very few barbers, out of the weekly bills of mortality, uſe any hair-powder made from ſtarch; and that the endeavours which we have uſed to bring them to comply with the laws, have hitherto proved ineffectual, from the unwillingneſs of the juſtices to put the laws in execution; and that, notwithſtanding the great number of barbers which have been convicted at this office, of uſing adulterated hair-powder, the practice ſtill continues to a high degree, even within the weekly bills of mortality.

We therefore offer it as our humble opinion, that if the preſent duty on ſtarch were reduced to one half, that is, to one penny *per* pound, there is reaſon to hope, that the traders may be induced to make uſe of ſuch materials in the making of hair-powder as the law requires; and the barbers be enabled, by the cheapneſs of the commodity, to uſe the ſame more generally in their trades; whereby the conſumption of ſtarch would be greatly increaſed, and the revenue would be benefited by it.

We thereupon ſubmit the propoſals in the memorial to your lordſhips conſideration. Given under our hands this 26th day of February 1752.

Thus far the affair of reducing the duty on ſtarch has hitherto been carried: but it being late in the ſeaſon when the right honourable the lords of his Majeſty's treaſury received the foregoing report, nothing could be further tranſacted therein during the ſeſſion of parliament in 1752; though, ſays Mr. Brooks, I have the greateſt reaſon to flatter myſelf, that it will merit the cloſe attention of the legiſlature in the next, eſpecially when ſupported by ſuch authentic teſtimonies.

However, in the mean time, I ſhall endeavour farther to corroborate what has been already advanced, in favour of reducing the duty on ſtarch; and ſhall, with due deference to the report of the honourable commiſſioners of exciſe, endeavour to demonſtrate, that the lowering the ſaid duty to 1-4th part, may afford the greateſt probability of a large encreaſe of his Majeſty's revenue, conſiderably promote the ſtarch-manufactory, be of the greateſt advantage to the fair trader, and likewiſe effectually redreſs the grievances complained of by the barbers, peruke-makers, and other dealers in hair-powder; beſides proving an ineſtimable benefit to the farmers, and landed intereſt in general.

In order to this, I ſhall lay down two propoſitions; of which I beg that the computations exhibited in the foregoing memorial may be admitted as the firſt; and from theſe two ſhall draw ſuch concluſions, as I hope will effectually ſupport the matter in hand.

From what is advanced in the foregoing memorial, I ſhall aſſume as my firſt propoſition,

	L.	s.	d.
That if the preſent duty on ſtarch was lowered to 1-4th part, there would ariſe thereby, from the uſe of hair-powder by the barbers in England only, the annual ſum of - -	17,333	6	8
Then allowing the private families to uſe but 1-3d of this quantity, it would annually produce - -	5,777	15	6½
The total of which ſhews, that the produce of the duty by the uſe of powder, excluſive of Scotland, and what the ſtarch will produce, amounts to the annual ſum of - -	23,111	2	2½
But from the ſtricteſt enquiry which I have made, and the opinion of others, it may be admitted, that the nobility, gentry, farmers, graziers, and tradeſmen, together with the commonalty in Great Britain, uſe an equal quantity with barbers; then the foregoing eſtimate will amount to the ſum of	34,666	13	4
Now, according to a ſecond propoſition, hereafter following, the above conſumption of the nobility, gentry, barbers, &c. will amount to the annual ſum of - -	47,450	0	0
The total of which eſtimate is -	82,116	13	4
And from hence I propoſe aſſuming the medium of - -	41,058	6	8

And this medium, ariſing from the two different calculations, will, I hope, ſufficiently juſtify me in deducing ſuch facts as may ſtrengthen and ſupport what has been offered upon the ſubject; ſince it appears from the foregoing candid report of the honourable commiſſioners of exciſe, that very few barbers out of the bills of mortality at preſent make uſe of any powder duly prepared; and when the duty upon ſtarch was at the higheſt produce, the revenue ariſing from powder has been adjudged not to exceed 5000 l. Therefore, admitting the foregoing medium, from thence, by the duty on powder only, will ariſe a loſs to the government, between what may be raiſed at the fourth part, and what the preſent high

high duty hath ever produced, amounting to the ſum of 36,058 l. 6 s. 8 d.

To corroborate what has already been advanced, I ſhall lay down my ſecond propoſition or eſtimate; which has coſt me much pains in bringing to ſuch a nicety, as may prevent any ſcruple of its being as near the truth as the nature of the ſubject will admit of.

	L.	*s.*	*d.*
1. The 40,000 of the trade of barbers, adjudged in the memorial to be in England, I ſhall divide into eight claſſes: of the firſt I ſhall admit 10,000, to make uſe of only two pounds of powder *per* week each; which, at the preſent duty, amounts to the annual ſum of - - -	0	17	4
This, according to the new duty, will be but	0	4	4
Wherefore every one of the above will ſave annually - - -	0	13	0
And the government gain *per ann.* -	2166	13	4
2. Again, admitting that 10,000 of another claſs make uſe of four pounds *per* week each, at the preſent duty, it will amount to	1	14	8
This, according to the new duty, will be	0	8	8
Each of the above will ſave annually -	1	6	0
And the government gain *per ann.* -	4333	6	8
3. Admitting that 10,000 of another claſs uſe ſix pounds *per* week each, at the preſent duty, it amounts to - -	2	12	0
The new duty will only be -	0	13	0
Each of this claſs will ſave annually	1	19	0
And the government gain *per ann.* -	6500	0	0
4. Allowing alſo, that 5000 of another claſs uſe eight pounds *per* week, at the preſent duty, it amounts to - -	3	9	4
The new duty will only be - -	0	17	4
Each of the above will ſave annually -	2	12	0
And the government ſave *per ann.* -	4333	6	0
5. Admitting alſo 2000 of another claſs to uſe ten pounds *per* week, at the preſent duty, it amounts to - - -	4	6	8
The new duty will only be -	1	1	8
Each of this claſs will ſave annually -	3	5	0
And the government gain *per ann.* -	2166	13	4
6. Again, allowing 2000 of another claſs to make uſe of twelve pounds *per* week each, at the preſent duty, it amounts to -	5	4	0
The new duty will only be - -	1	6	0
Each of this claſs will ſave annually -	3	18	0
And the government gain *per ann.* -	2600	0	0
7. Admitting alſo, that 500 of another claſs uſe fourteen pounds each *per* week, at the preſent duty, it amounts to -	6	1	4
The new duty will be only - -	1	10	4
Each of this claſs will ſave annually -	4	11	0
And the government gain *per ann.* -	751	6	8
8. and laſtly, Allowing that 500 of the higheſt claſs uſe ſixteen pounds of powder each *per* week, at the preſent duty, it amounts to	6	18	8
The new duty will be only -	1	14	8
Each of this claſs will ſave annually -	5	4	0
And the government gain *per ann.* -	866	13	4

Now, it appears, by collecting the ſeveral totals in this calculation, that the barbers uſe of powder would produce to the revenue the annual ſum of - 23,725 0 0

And it is likewiſe adjudged by the makers and dealers in ſtarch, that the private families throughout the kingdom cannot fail of creating the ſame conſumption, which will alſo produce the yearly ſum of 23,725 0 0

Therefore the whole amount, by this calculation, from powder only, will be the annual ſum of - - 47,450 0 0

In the foregoing eſtimates all poſſible care has been taken not to rely upon any conſumption but what has been adjudged to be neareſt the truth; and we hope that every dealer and judge of the trade will candidly allow, that therein we have rather been under than above the mark; eſpecially when the quantity of ſtarch that is uſed in making of indico, and other manufactures, becomes duly weighed and conſidered, of which we have made no account in our preceding calculations.

Having thus amply ſet forth the advantages that will accrue to the revenue, I ſhall now beg leave to exhibit, in a few words, the benefits that muſt neceſſarily ariſe to the landed intereſt from ſuch an enlargement of the conſumption of wheat, as we are about to promote.

Now, as ſome people have taken it into their imagination, that the conſumption of either flour or ſtarch is equally advantageous to the farmer and landholder, I ſhall beg leave to rectify their miſtake in a few words.

The production of ſtarch from wheat to that of flour is as 25 to 42; and conſequently a buſhel of wheat that produces 42 lb. of flour, will give but 25 lb. of ſtarch. Therefore it requires a much larger quantity of wheat to make 42 lb. of ſtarch, than it does to produce the like quantity of flour.

It is therefore evident, that to produce as much ſtarch as pays duty of 4 s. 2 d. will require one buſhel of wheat; wherefore to produce the annual amount of 13,000 l. will require 7800 quarters.

Again, upon the ſame principles, to produce the ſum of 144,444 l. which has been before obſerved to be annually deficient, will require 106,666 quarters, and the difference between them is 98,866 quarters.

Having ſhewn the inconveniencies that time has evinced to be ſuſtained by the whole community from ſuch an exorbitant duty being laid on ſtarch, made of wheat, one of our ſtaple-commodities, which no other nation has thought fit to impoſe any tax upon; I ſhall venture to ſet forth how much more the ſaid duty pays to the crown than the double duty ariſing from barley when malted and brewed, *viz.* the duty on the ſame when malted being 4 s. *per* quarter, and when brewed about 10 s. *per* hogſhead, at 8 buſhels each, it makes the double duty to be about 14 s.

And as it appears, by the preſent duty ariſing from ſtarch, each buſhel of wheat producing 25 lb. of ſtarch, amounts to 4 s. 2 d. that makes 1 l. 13 s. 4 d. *per* quarter; which exceeds the double duty on barley by 19 s. 4 d. each quarter, that is, near 2-3ds of the value of the wheat.

Now, ſeeing there is ſuch a diſproportionable duty between the two commodities, the latter muſt be ſuppoſed, for want of proper checks, ſubject to many difficulties in collecting, as ſet forth in the report: "That the great "duty laid on ſtarch of 2 d. *per* pound, which is re- "preſented as more than the intrinſic value of the com- "modity, excluſive of the duty, has been a great tempta- "tion to ſtarch-makers to work privately, in order to "avoid the paying the duty; and to the barbers to uſe coun- "terfeit powder, made without ſtarch; whereby the re- "venue is greatly prejudiced." And I beg leave further to obſerve, that the makers of ſophiſticated hair-powder, moſtly live out of the knowledge of the officers. The ſaid honourable commiſſioners have further delivered it as their opinion, "That if the preſent duty on ſtarch "were reduced to one half, that is, to 1 d. *per* pound, "there is reaſon to hope that the traders may be induced "to make uſe of ſuch materials in the making of hair-

" powder as the law requires; and the barbers be en-
" abled, by the cheapneſs of the commodity, to uſe the
" ſame more generally in their trades; whereby the
" conſumption of ſtarch would be greatly increaſed, and
" the revenue benefited thereby."

By this it appears, that the revenue ſuffers ſo great a loſs from the duty on powder, which is much owing, among other cauſes, to the lowneſs of the prices given in the barbers trade; they being the only perſons obliged by law to make uſe of the ſaid commodity, though unable to comply therewith: and the honourable commiſſioners have adjudged, that the lowering the duty to one half what it is at preſent, will be a great relief to the unhappy ſufferers, as well as an adequate advantage to the revenue.

From hence, with ſubmiſſion to that honourable board, I would humbly beg leave to make the following obſervations. 1. It has appeared to me, from the improvements made in adulterating hair-powder, that it may continue to be ſold under ſuch a profit as will induce, and ſtill encourage the ſaid illicit traders in treſpaſſing againſt the law, by increaſing their trade in the country, by ſale of ſuch a commodity as will be exceeding difficult for the officers to diſtinguiſh from the real hair-powder that has paid the duty. 2. Whether the ſaid duty, at 1 d. ariſing to 9 l. *per* tun, will not be a means of encouraging other countries ſtill to continue running ſtarch in upon us, or taking the advantage of the drawback? ſince it is obſerved in the 7th article of the memorial, that when the duty ſhall be lowered to 4 s. 8 d. *per* hundred, it will be very little more than the *extra* expence which neceſſarily attends ſmuggling, and a clandeſtine trade; neither could it then be thought practicable, from the ſmallneſs of the profit, and great hazard run in being detected, for any makers of adulterated powder to continue their preſent illicit practices. But it is to be hoped, from a due conſideration of the foregoing calculations, and the reaſons herein offered, that the legiſlature will, of their great wiſdom, compleat what the honourable commiſſioners of exciſe have already begun; in granting proper relief to a diſtreſſed trade, by lowering the duty upon ſtarch to 1-4th what it is at preſent, as the only means for procuring a greater certainty of the above augmentation to the revenue, and advantage to the fair trader; eſpecially as it will induce all conſumers of ſtarch, ſuch as indico-makers, dyers, whiteſters, &c. to make uſe of a conſiderably larger quantity thereof in their ſeveral manufactures, which the preſent high duty now prevents; and alſo encreaſe the conſumption of ſuch wheats as are only fit for the ſtarch-makers uſe.

This conſidered, with the loſs of manufacturing the ſame, and the deficiency in trade, will, with the following reaſons, leave no doubt of what is here propoſed, juſtly meriting the greateſt attention from the legiſlature. For the deficiency in the foregoing conſumption brings on a loſs of another nature, *viz.* whereas by act of parliament a buſhel of meal ought to weigh 56 lb. and the ſame producing only 25 lb. of ſtarch, there will remain 31 lb. of hog-feed in each buſhel; which makes 248 lb. in a quarter, or 2,438,768 lb. of ſuch hog-feed, which otherwiſe would remain in the 98,876 quarters, or become a loſs of ſo much feed, if exported unmanufactured. And daily experience manifeſts, that bacon and pork of the ſtarch-makers feed affords the beſt of price, as it is deſervedly of great repute. Now, could we encreaſe the conſumption of ſtarch to the height it aroſe before the duty was impoſed on the ſame, our colonies, and ſettlements abroad, together with the Britiſh navy, might be amply furniſhed with ſuch pork as would never admit of any juſt complaint, even from the ſeamen. Wherefore the foregoing arguments ſhould, as might reaſonably be thought, have weight enough to remove the whole preſent duty upon ſtarch, to ſome thing that would leſs affect the commonweal. For as a bounty is allowed of near a ſixth part the value of ſuch corn exported, which bounty is granted for the ſake of the landed intereſt; it cannot be otherwiſe than reaſonable to preſume, that we ought to give all imaginable encouragement towards creating a home conſumption, more eſpecially in a manufactory that has ſo many public advantages attending the ſame.

The want of ſuch conſumption may indeed give the merchants a greater opportunity to purchaſe ſuch corn at a market-price, and not ſuffer the ſame to remain in the farmers hands. But then the conſequence will be this, that when the foregoing ſuppoſed quantity of 98,866 quarters is ſold to Holland, or any other foreign market, for the uſe it is only fit for, that of making ſtarch, the ſame ſo ſhipped brings a demand of 5 s. *per* quarter on the government, which may be above the fifth part of the value of the ſame, amounting to the annual ſum of 24,716 l. Now I would aſk, whether we do not purchaſe commerce at too high a rate, for the ſake of caſh, when there is the greateſt probability, that in leſs than ſix months a larger ſum may be returned by the ſame commodity being brought in, and ſold in this nation, manufactured? And as there remains no duty on ſtarch in any other country, our preſent high duty of 18 l. *per* tun, admits of room for the illicit practice of ſmuggling the ſame, to the great denial of what has here already been penned in ſupport of our home conſumption and manufacture.

I ſhall beg leave to make another obſervation or two relating to the ſubject, and then conclude. Foreign nations have taken an opportunity to reflect on our politicks, by obſerving, that we have laid a duty upon the manufacturing of one of our ſtaple commodities, which pays above one half of the value of the land that produces it; and, at the very time, we give a fifth part, or more, of its value to get rid of the ſame. For example; if we value the arable lands in this kingdom, at a medium, at 8 s. *per* acre, the value, at 20 years purchaſe, will be 8 l. Then admitting that each acre of wheat-land produces *communibus annis* two quarters and a half, the duty ariſing from 25 lb. of ſtarch, made from a buſhel of wheat, is 4 s. 2 d. and the quarter, or eight buſhels, will be 1 l. 13 s. 4 d. This admitted, makes each acre pay an annual duty of 4 l. 3 s. 4 d. which leads me to obſerve, that the duty amounts to 3 l. 6 s. 8 d. more than the half value of the land, and raiſes it to 23 years purchaſe.

The drawback on Britiſh made ſtarch. By the 6th of George I. it is enacted, That for every pound avoirdupois weight there ſhall be paid one penny; which duties having been paid by the maker, may be repaid by the collector, upon exportation to foreign parts by way of merchandiſe: provided ſufficient ſecurity be given to the collector of the port, before ſhipping, that it ſhall not be relanded in Great Britain, and proof be made upon oath before the collector of the cuſtoms, that the duties have been paid; whereupon the ſaid collector is to grant a debenture, expreſſing the kinds and quantities, with the ſhipping, teſtified by the ſearcher: if relanded, the value to be forfeited, beſides the penalty of the bond.

STARCH-MAKER. A perſon who makes ſtarch.

STARCH-MAKERS *company of London*, was incorporated by letters-patent of the 20th of James I. dated the 13th of May 1622, by the name of The maſter, wardens, aſſiſtants, and commonalty of the art or myſtery of ſtarch-makers; which is governed by a maſter, 2 wardens, and 24 aſſiſtants; but they have neither livery nor hall to manage their affairs in.

STARO, or *Staio*, and *Stara*. A liquid meaſure uſed at Florence, containing 3 barrels, and the barrel 20 flaſques. The ſtaro is alſo a buſhel uſed at Venice, Leghorn, and Lucca, for meaſuring corn.

The ſtaro of Leghorn weighs uſually 54 lb.

The ſtaro of Venice weighs 128 lb. heavy weight, and each ſtaro contains 4 quarts.

START *Point*. A cape or promontory of Devonſhire, in the Engliſh channel, ſituated in 4 deg. 6 min. of W. lon. and 50 deg. 10 min. of N. lat. 12 miles ſouth of Dartmouth.

STARTING, among brewers, the putting of new beer or ale to that which is decayed, to revive it again.

STATE, or *Eſtate*. An empire, kingdom, province, or extent of country, under the ſame government.

The ſtate or ſtates of the King of England, include the Britiſh

S T A

Britiſh iſlands, and the Weſt India plantations, as Virginia, Carolina, Maryland, and the reſt; to which may be added the duchies of Brunſwick-Lunenburg, Bremen and Verden.

STATE, is alſo uſed for the policy or form of government of a nation: hence the terms, miniſters of ſtate, reaſons of ſtate, and the like.

Politicians diſtinguiſh ſeveral forms of ſtate, namely, the monarchic, as that of England; the democratic, as that of Rome and Athens; the oligarchic, as that of Venice; and the ariſtocratic, as that of Sparta.

STATED *winds*. See *Wind*.

STATEN *iſland*. An iſland of the province of New York, in North America, ſituated in 72 deg. 31 min. of W. lon. and 41 deg. of N. lat. near the month of Hudſon's river, ſubject to Great Britain.

STATERA *Romana*, or *Stillyard*. A name given to the Roman balance. See *Stillyard*.

STATES. A term applied to the ſeveral orders or claſſes of a people, aſſembled to conſult of matters for the public good.

STATES-GENERAL. The name of an aſſembly, conſiſting of the deputies of the ſeven United Provinces. See *United* Provinces.

STATIONER. A tradeſman who deals in paper, parchment, pens, quills, ink, ſealing-wax, books of accompt, blank books, and the like.

STATIONERS *company of London*, was incorporated by letters-patent of the 3d and 4th of Philip and Mary, dated the 4th of May 1557, by the title of The maſter, and keepers or wardens, and commonalty of the myſtery or art of ſtationers of the city of London; being governed by a maſter, 2 wardens, and 27 aſſiſtants; with a livery of 208 members; who, when admitted, pay a fine of 20l. and have a ſtately hall near Ludgate-ſtreet, wherein they manage their affairs.

This company, conſiſting of ſtationers, bookbinders, bookſellers, printers, and letter-founders, has a ſtock of about 15,000l. denominated the *Engliſh ſtock*; which is employed in printing almanacks, horn-books, primmers, pſalters, ſchool-books, and privileged ware; the ſole printing whereof is confirmed to them by letters-patent of ſeveral kings.

This ſtock, which conſiſts of 15 whole ſhares, of 320l. each, is generally poſſeſſed by thoſe who have ſerved or fined for maſter: the ſecond at 30 half ſhares, of 160l. each, which are chiefly enjoyed by the aſſiſtants: the third are ſixty quarter-ſhares, of 80l. each, which are commonly divided between ſuch as have fined for renter-warden. But, the company being much more numerous than formerly, many of the laſt mentioned are divided into 40l. ſhares, for the obliging a greater number of members.

Upon the death of any of the married poſſeſſors of this ſtock, the profits ariſing from his ſhare devolve to his widow, which ſhe enjoys during her widowhood or life; but, at the expiration of either, another perſon is choſen to enjoy the profits of the ſaid ſhare; to which he is no ſooner ſelected, than he pays the depoſit-money to the late widow, her huſband, or executors.

The dividends upon the ſtock are made at Chriſtmas, which are increaſed or decreaſed according to the expence of the preceding year: however, it is ſeldom leſs than 40l. upon a whole ſhare. A fine intereſt upon 320! The maſter and wardens of the company are always in the direction of the ſtock; to them are joined ſix other members, annually elected, who adjuſt all accompts relating thereto, and at Chriſtmas report the ſtate thereof to the board, who regulate the above mentioned dividends accordingly; and the company pays in penſions, and other charities, about 300l. *per annum*.

STATUARY. A branch of ſculpture, employed in the making of ſtatues. See *Statue*.

STATUARY, is one of thoſe arts wherein the ancients excelled the moderns: indeed it was much more popular, and more cultivated among the former than the latter. It is diſputed between ſtatuary and painting, which of the two is the moſt difficult, and the moſt artful.

The invention of ſtatuary was at firſt very coarſe. Leon Battiſta Alberti, who has an expreſs treatiſe on ſtatues, imagines that it took its riſe from ſomething caſually obſerved in the productions of nature, that, with a little help, ſeemed diſpoſed to repreſent the figure of ſome animal. The common ſtory is, that a maid full of the idea of her lover, made the firſt eſſay, by the aſſiſtance of her father's implements, who was a potter. This at leaſt is pretty certain, that earth is the firſt matter ſtatuary was practiced upon.

STATUARY, is alſo uſed for the artificer, who makes ſtatues. Phidias was the greateſt ſtatuary among the ancients, and Michael Angelo among the moderns.

STATUE. A piece of ſculpture in full relievo, repreſenting a human figure.

Daviler more ſcientifically defines ſtatue, a repreſentation in high relievo and inſulate, of ſome perſon diſtinguiſhed by his birth, merit, or great actions; placed as an ornament in a fine building, or expoſed in a public place, to preſerve the memory of his worth.

In ſtrictneſs, the term *ſtatue* is only applied to figures on foot, the word being formed from the Latin *ſtatura*, the ſize of the body; or from *ſtare*, to ſtand.

Statues are formed with the chiſſel, of ſeveral matters, as ſtone, wood, marble, and plaiſter. They are alſo caſt of various kinds of metal, particularly gold, ſilver, braſs, and lead. See *Foundery*.

Allegorical STATUE. That which, under a human figure, or other ſymbol, repreſents ſomething of another kind; as a part of the earth, a ſeaſon, age, element, temperament, or hour.

Curule STATUES. Thoſe which are repreſented in chariots drawn by bigæ or quadrigæ, that is, by two or four horſes; of which kind there were ſeveral in the circus's and hippodromes: or in cars, as we ſee ſome with triumphal arches on antique medals.

Equeſtrian STATUE. That repreſenting ſome illuſtrious perſon on horſeback, as the famous one of Marcus Aurelius at Rome, and that of King Charles I. at Charing-croſs.

Greek STATUE, denotes a figure that is naked and antique; it being in this manner the Greeks repreſented their deities, athletæ of the Olympian games, and heroes. The reaſon of this nudity, whereby the Greek ſtatues are diſtinguiſhed is, that thoſe who exerciſed wreſtling, wherein the Greek youth placed their chief glory, always performed it naked.

The ſtatues of heroes were particularly called Achillean ſtatues, by reaſon of the great number of figures of that prince in moſt of the cities of Greece.

Hydraulic STATUE. Any figure placed as an ornament of a fountain or grotto, or that does the office of a jet d'eau, a cock, ſpout, or the like, by any of its parts, or by any attitude it holds. The like is to be underſtood of any animal ſerving for the ſame uſe.

Pedeſtrian STATUE. A ſtatue ſtanding on one foot, as that of King Charles II. in the royal exchange, and that of King James II. in the privy-gardens.

STATUTE, in the general ſenſe, ſignifies a law, ordinance, or decree.

STATUTE, in the Engliſh laws and cuſtoms, more immediately ſignifies an act of parliament made by the three eſtates of the realm, and having the force of a law.

STATUTE-*merchant*, is a bond of record, acknowledged before one of the clerks of the ſtatutes-merchant, and mayor or chief warden of the city of London, or two merchants of the ſaid city for that purpoſe aſſigned; or before the mayor, chief warden, or maſter of other cities and towns, or other ſufficient men for that purpoſe appointed, ſealed with the ſeal of the debtor and of the king; which is of two pieces, the greater to be kept by the mayor, chief warden, or maſter; and the leſſer by the ſaid clerk. Its effect is, that if the obligor pay not the debt at the day, execution may be awarded againſt his body, lands, and goods; and that the obligee ſhall hold the ſame till the debt be levied.

STATUTE-*ſtaple*, is a ſort of ſtatute-merchant, relating to merchants, and merchandiſes of the ſtaple. See *Staple*.

The ſtatute-ſtaple is of two kinds, proper and improper. Proper, is a bond of record acknowledged by the mayor

of

of the ſtaple, in the preſence of one or more conſtables of the ſtaple; by virtue of which the creditor may forthwith have execution of the body, lands, and goods of the debtor, on non-payment. Improper, is a bond of relief, founded upon the ſtatute of the 23d of Henry VIII. of the nature of a proper ſtatute-ſtaple as to the force and execution of it, and acknowledged before one of the chief juſtices; or in their abſence, before the mayor of the ſtaple, and recorder of London.

STAVANGER. A port-town of Norway, in the province of Bergen, capital of the territory of Stavanger, ſituated on a peninſula in the German ocean, in 6 deg. 30 min. of E. lon. and 59 deg. 30 min. of N. lat. 80 miles ſouth of Bergen.

STAVEREN. A port-town of the United Netherlands, in the province of Weſt Frieſland, ſituated on the Zuyder ſea, in 5 deg. 12 min. of E. lon. and in 53 deg. of N. lat. 15 miles north of Enchuyſen.

STAY, in the ſea-language. A big, ſtrong rope, faſtened to the top of the maſt, and the foot of that next before it, towards the prow; ſerving to keep it firm, and prevent its falling aftwards, or towards the poop. All maſts, top-maſts, and flag-ſtaves, have their ſtays, except the ſprit-ſail-top-maſts: that of the main-maſt is called the main-ſtay; the main-maſt, fore-maſt, and thoſe belonging to them, have alſo back-ſtays, to prevent their pitching forwards or overboard, as going on either ſide her.

To ſtay a ſhip, or *bring her on the ſtays*, is to manage her tackle and ſails ſo, as that ſhe cannot make any way forwards, which is done in order to her tacking about.

STAYMAKER, is a perſon who makes ſtays, jumps, and bodice, for women; the materials in ſtays being tabby, canvas, and whale-fin, commonly called whale-bone.

STEADY. A word of command at ſea, for the man at the helm to keep the ſhip ſteady in her courſe; and not to make angles, or yaws, as they call them, in and out.

STEEL. A kind of iron refined, and purified by the fire, with other ingredients, which renders it whiter, and its grain cloſer and finer than common iron. See *Iron*.

Steel, of all other metals, is that ſuſceptible of the greateſt degree of hardneſs, when well tempered; whence its great uſe in the making of tools and inſtruments of all kinds.

The true method of making ſteel has been greatly concealed, and the public long abuſed by counterfeit ones. The following method we have from Agricola, and is affirmed by Kircher to be that practiſed in the iſle of Ilva; a place famous in all ages for the manufacture of ſteel, from the time of the Romans to this day.

Heat a quantity of iron red hot, cut it into ſmall pieces, and mix it with a ſort of ſtone that eaſily melts: this mixture put by little and little into a crucible, firſt filled with charcoal duſt, and heated red hot; when melted off, three, four, or more pieces of iron, are to be put in the middle of it; there boil them five or ſix hours with a ſtrong fire. The workman is to ſtir the melted matter often, that the pieces of iron may ſoak in the ſmaller particles of the melted matter; which particles conſume and thin the groſſer ones of the iron pieces; being, as it were, a ferment to them, and make them tender. One of the pieces is now taken out of the fire, and put under the great hammer, to be drawn out into bars, and wrought; and, hot as it is, plunged into cold water. Thus tempered, it is worked again upon the anvil; then breaking it, it is conſidered, whether in any part it looks like iron, or whether it is wholly condenſed and turned into ſteel.

STEELYARD, in mechanics. A kind of balance, called alſo *ſtatera Romana*, or the Roman balance; by means whereof the gravity of different bodies are found by the uſe of one ſingle weight. See *Balance*.

STEEM. A weight of 8 lb. uſed in Brabant, ſome of the hanſe towns, at Amſterdam, and in other parts of the United provinces.

STEERAGE. The act of ſteering.

The word is alſo uſed for a place in a ſhip, next below the quarter-deck, before the bulk-head of the great cabin, where the ſteerſman ſtands and lodges.

STEERING, in navigation. The directing a veſſel from one place to another, by means of the helm and rudder. He is held the beſt ſteerſman, who uſes the leaſt motion in putting the helm over to and again, and who keeps the ſhip beſt from making of yaws, that is, from running in and out.

There are three methods of ſteering: 1. By any mark on land, ſo as to keep the ſhip even by it. 2. By the compaſs, which is, by keeping the ſhip's head on ſuch a rhumb or point of the compaſs as beſt leads to port. 3. To ſteer as one is bidden or conned; which, in a great ſhip, is the duty of him that is taking his turn at the helm. See *Conned*.

For the theory and effects of ſteering, ſee *Sailing*, and *Courſe*.

STEGEBURG. A port-town of Sweden, in the province of E. Gothland, ſituated in 16 deg. of E. lon. and 58 deg. 30 min. of N. lat. on a bay of the Baltic ſea, 82 miles S. W. of Stockholm.

STEKAN, or *Steckan*. A Dutch liquid meaſure, particularly for oil, containing 16 mingles, 717 mingles making 1434 pints, or a tun.

The barique of Bourdeaux is 12 ſtekans and a half, and the puncheon of Nantz 12.

STEM, of a ſhip, is that main piece of timber which comes bending from the keel below, where it is ſcarfed, as they call it, that is, pieced in, and riſes compaſſing right before the forecaſtle. This ſtem it is which guides the rake of the ſhip, and all the butt-ends of the planks forwards are fixed into it.

STEP, in a ſhip, is that piece of timber, which is faſtened to the keelſon, whereon the main-maſt, miſſen-maſt, fore-maſt, and the capſtan ſtand.

STERLING. A term frequent in the Engliſh commerce; a pound, ſhilling, or a penny ſterling, ſignifying as much as a pound, ſhilling, or penny, of lawful money of England, as ſettled by public authority.

Antiquaries and critics are greatly divided as to the origin of the word ſterling. Buchanan fetches it from the caſtle of Striveling, or Sterling, in Scotland, where a ſmall coin was anciently ſtruck, that in time, according to him, came to give name to all the reſt. Camden derives the word from eaſterling, or eſterling; obſerving that, in the reign of Richard I. money coined in the eaſt parts of Germany, began to be of ſpecial requeſt in England, by reaſon of the purity thereof; and was called eaſterling money, as all the inhabitants of thoſe parts were called Eaſterlings; ſome of whom, ſkilled in coinage, were ſoon after ſent for over to perfect the Engliſh money, which was thenceforwards denominated from them ſterling, eaſterling, or eſterling; not from Striveling in Scotland, nor from *ſtella*, a ſtar, which ſome dream to have been coined thereon; for in old deeds the Engliſh ſpecies are always called *nummi eaſterlingi*, which implied as much as good and lawful money. Somner, again derives the word from the Saxon ſteore, a rule, or ſtandard; intimating that this, as to weight and fineneſs was to be the common ſtandard of all current money.

In Stow, and ſome other of our ancient writers, ſterling or eaſterling, is alſo uſed for a certain coin, amounting nearly to our ſilver penny: and on ſome occaſions we find the ſame word ſterling uſed in the general for a piece of money; it being obſervable, that for a good while together there was no other coin but pennies, which with ſterlings and eaſterlings were become ſynonymous, much as among the ancients the words *denarius* and *nummus* were uſed.

STERN *of a ſhip*, uſually denotes all the hindermoſt part of her; but, properly, is only the outmoſt part abaft.

STERN *chaſe*. See *Chace*.

STETIN. A city and port-town of Germany, in the circle of Upper Saxony, capital of the duchy of Pomerania, ſituated in 14 deg. 50 min. of E. lon. and 53 deg. 30 min. of N. lat. on the weſt ſhore of the river Oder 35 miles ſouth of the Baltic ſea, and 66 miles north of Berlin, ſubject to the King of Pruſſia.

STEWARD *of a ſhip*, is he who receives all the victuals from the purſer, and is to ſee it well ſtowed in the hold

all things of that nature belonging to the ſhip's uſe are in his cuſtody: he looks after the bread, and diſtributes out the ſeveral meſſes of victuals in the ſhip: he has an apartment for himſelf in the hold, which is called the ſteward's room.

STHÆCAS. The name of a plant which enters the compoſition of the theriaca; being of two ſorts, the ſthæcas arabicum, and the ſthæcas citrinum.

The ſthæcas arabicum is a plant which grows chiefly in the Hieres iſlands in France; whoſe leaves are narrow and greeniſh; and flowers, ſmall blue, and reſembling the violet. The flowers are the only part of the plant that is uſed, and muſt be choſen of a beautiful blue.

The ſthæcas citrinum, called otherwiſe yellow amaranth, differs only from the arabicum in colour; growing chiefly in Languedoc and Provence, in France.

STIBIUM. See *Antimony*.

STICAON. A weed growing in the neighbourhood of Palmyra, in Syria; of which the Arabs make the beſt ſort of pot-aſhes, to carry to Tripoli, and other places, where ſoap is made.

The plant is without leaves, having a ſoft juicy ſtalk ſhooting out into ſeveral branches, reſembling ſamphire; and, in burning, runs into cakes, not unlike the cinders of a forge, but heavier, and not ſo full of pores, nor ſo hard, as they are.

STILE. See *Style*.

STILLYARD, in commerce. The company of the ſtillyard was a community, or corporation of foreign merchants, eſtabliſhed at London; thus called from the place where they had their reſidence, called the ſtillyard, near the bridge, which was aſſigned them by act of parliament; and which, in ſome records, is called *Guildhalda Teutonicorum*; being, as ſome write, a broad place, or yard, where much ſteel uſed to be ſold.

This company was created in the year 1215, under Henry III. in favour of the free cities of Germany, who had been aſſiſtant to him in his wars againſt France; whereby the company rendered itſelf miſtreſs of all the Engliſh manufactories, particularly of cloth, which it was allowed not only to ſell throughout the kingdom, but alſo to export abroad.

The prejudice theſe privileges did, by which the company frequently abuſed the nation, occaſioned its being broke, by ſentence of the judges, under Edward IV.; but it redeemed its rights, and laſted to the year 1552, when it was ſuppreſſed by Edward VI.

STIPULATION, in the civil law. The art of ſtipulating; that is, of treating and concluding terms and conditions to be inſerted in a contract.

Stipulations were anciently performed at Rome with abundance of ceremonies; the firſt whereof was, the one party ſhould interrogate, and the other anſwer, to give his conſent, and oblige himſelf. By the ancient Roman law, no body could ſtipulate but for himſelf: but as the tabelliones were public ſervants, they were allowed to ſtipulate for their maſters; and the notaries ſucceeding the tabelliones, have inherited the ſame privilege. The ſtipulation had its origin in the *lex aquilia*, and another law of the emperor Arcadius. The word is taken from the Latin *ſtipula*, a ſtraw; becauſe in making a ſale, a ſtraw was given the purchaſer, in ſign of a real delivery; which cuſtom is ſtill retained in ſome parts of France, particularly at Verdun; where it has been always cuſtomary on this occaſion for the two parties to break a ſtraw between them, and each take his moiety; which they afterwards joined again, to recognize their promiſe.

STIVER. See *Stuyver*.

STOCK. A fund of money or quantity of goods, but is now particularly applied to the public funds. See *Fund*.

STOCK-FISH, or *Stock-fiſh*, in commerce. A kind of dried, ſalted fiſh, of a greyiſh aſh-colour, only the belly ſomewhat whiter.

The commerce of ſtock-fiſh is very conſiderable in Holland, both from the great conſumption thereof in the country, and from their victualling their veſſels therewith. It is ſaid to take its name from being as hard as a ſtock, or from its needing to be beaten with a ſtick, to fit it for eating. See Cod *Fiſhery*.

Three ſorts of ſtock-fiſh, the round, the long, and the ſhort, are ſold at Amſterdam by the quintal of 103 lb. and the deductions are 1 *per cent.* for good weight, and as much for prompt payment.

Round ſtock fiſh is ſold for about 16 s. ſterling the hundred, the long for about 17 s. and the ſhort for about 11 s. ſterling.

STOCKHOLM. The capital city of Sweden, in the province of Eaſt Gothland, ſituated in 18 deg. of E. lon. and 59 deg. 30 min. of N. lat. on ſeveral ſmall iſlands in the Meller lake, 300 miles N. E. of Copenhagen, 900 miles N. E. of London, and 400 miles weſt of Peterſburg. See *Sweden*.

STOCKING. That part of the cloathing of the leg and foot, which immediately covers their nudity, and ſkreens them from the rigour of the cold.

Anciently the only ſtockings in uſe were made of cloth, or milled ſtuffs ſewed together; but ſince the invention of knitting and weaving ſtockings of ſilk, wool, cotton, and thread, the uſe of cloth ſtockings is quite exploded.

The modern ſtockings, whether wove or knit, are a kind of plexus's formed of an infinite number of little knots, called ſtitches, loops, or maſhes, intermingled in one another.

Knit STOCKINGS, are wrought with needles made of poliſhed iron, or braſs-wire, which interweave the threads, and form the maſhes the ſtockings conſiſt of. This operation is called knitting; the invention whereof is difficult to fix preciſely, though it is commonly attributed to the Scotch, on this ground, that the firſt works of this kind came from thence; and that it was upon this account the company of ſtocking-knitters eſtabliſhed at Paris in 1527 took for their patron St. Fiacre, who is ſaid to have been a ſon of one of the kings of Scotland.

Woven STOCKINGS, are ordinarily very fine; they are manufactured on a frame or machine made of poliſhed iron; the ſtructure whereof is exceeding ingenious, but exceedingly complex; ſo that it is very difficult to deſcribe it well, by reaſon of the diverſity and number of its parts; nor is it even conceived, without a deal of difficulty, when working before the face.

The Engliſh and French have greatly conteſted the honour of the invention of the ſtocking-loom: but the matter of fact, waiving all national prejudices, ſeems to be this, that a Frenchman firſt invented this uſeful and ſurpriſing machine; who, finding ſome difficulties in procuring an excluſive privilege, which he required, to ſettle himſelf at Paris, went over to England, where his machine was admired, and the workman rewarded according to his merit. The invention thus imparted to the Engliſh, they became ſo jealous thereof, that for a long time it was forbid, under pain of death, to carry any of the machines out of the iſland, or communicate a model thereof to foreigners. But as it was a Frenchman firſt enriched the nation with it, ſo a Frenchman firſt carried it abroad; and, by an extraordinary effort of memory and imagination, made a loom at Paris, on the idea he had formed thereof in a voyage he made to England. This loom, firſt ſet up in the year 1656, has ſerved for the model of all thoſe made in France and Holland.

The combing of wool, invented by Biſhop Blaze, added a farther improvement to the manufacture; and the eſtabliſhing of the mill for throwing of ſilk, at Derby, by Sir Thomas Lombe, has compleated it, and enabled the ſubjects of Great Britain, not only to furniſh themſelves and the Britiſh plantations with ſilk and worſted ſtockings, but many other parts of Europe.

Knit ſtockings are much preferable in durableneſs and ſtrength to thoſe made in the loom; but the time employed in knitting ſtockings of any fineneſs raiſes their price too much for common wear. The Scotch make the beſt knit ſtockings of any people in Europe, and ſell them at exorbitant rates; 30 s. for a pair of white knit ſtockings from Aberdeen being a common price, and ſome amounting to 4 l.

STOCKJOBBER. See *Broker*.

STOCKS, in ſhip-carpentry. A frame of timber, and great poſts, made aſhore, to build pinnaces, ketches, boats, and ſuch ſmall craft, and ſometimes ſmall frigates upon. It is hence we ſay, *a ſhip is on the ſtocks*, when ſhe is building.

STONE, in natural hiſtory. A hard, ſolid body, neither malleable, fuſible by fire, nor ſoluble in water, formed by ſucceſſion of time in the body of the earth.

Stones are of various kinds, with regard to the places they are produced in: the moſt ordinary are under ground; others in the bodies of men, and other animals; others ſeem to be generated by the ſea, as pumice, and the like; others the effect of a petrifying virtue in certain waters.

Of theſe, ſome ſerve ſimply for magnificence and ornaments; as all thoſe called

Precious STONES, which make the commerce of lapidaries and jewellers.

Others much more uſeful, if one might credit all the virtues attributed to them, are uſed in medicine; ſuch as bezoard, Jews-ſtone, eagles-ſtone, and many more.

Others again are uſed in painting; either to prepare colours from, by calcining and grinding them, or to be uſed as crayons or pencils for deſigning; of which number are the Armenian ſtone, black lead, and ruddle.

Laſtly, much the greateſt quantity, and thoſe too of the moſt immediate and common uſe, are thoſe employed in building; ſuch as free-ſtone, marble, lime-ſtone, and fire-ſtone. For

Free STONE, that dug in the peninſula of Portland, and thence called Portland ſtone, is much uſed; being ſofter and whiter than Purbec-ſtone, and is commonly raiſed out of the quarries in bigger blocks than that.

Some alſo call Ryegate, or fire-ſtone, free-ſtone.

Mr. Boyle obſerves, that a competent knowledge of the nature of the ſap or juice found in ſtones uſed in building, is of the laſt importance; the ſame ſtone dug out of the ſame quarry in one ſeaſon being found to moulder away in a few winters, which, dug at another ſeaſon, will brave the weather for many ages; and there are others, which, though dug at the proper ſeaſon, yet make but ruinous buildings, if uſed at an improper ſeaſon. The ſame author adds, that as there are ſome ſorts of ſtones which will decay in a few years, there are others will not have attained their full hardneſs in 30 or 40 years, or even much more.

STONE, alſo denotes a certain quantity or weight of ſome commodities. See *Weight*.

A ſtone of beef at London, is the quantity of 8 pounds, in Herefordſhire 12 pounds, in the North 16 pounds. A ſtone of glaſs is 5 pounds, of wax 8 pounds. A ſtone of wool, according to the ſtatute of the 11th of Henry VII. is to weigh 14 pounds; yet in ſome places it is more, in others leſs; as in Glouceſterſhire 15 pounds, in Herefordſhire 12 pounds. Among horſe-courſers, a ſtone is the weight of 14 pounds.

STONE-*blue*. A mineral preparation, properly called ſmalt. See *Smalt*.

STOOMING *of wine*. The putting bags of herbs, or other ingredients in it.

STOPPAGE. See *Payment*.

STORAX. A reſinous, odoriferous gum, brought from Syria; whereof there are two or three kinds, red ſtorax, ſtorax calamita, and liquid ſtorax.

Red or *dried* STORAX, called alſo *Jews incenſe*, is a gum or reſin oozing out at an inciſion made in the trunk and biggeſt branches of a tree called ſtorax, not unlike the quince-tree; whoſe fruit is of the ſize of a filberd, and contains a white, oily kernel, of a ſmell perfectly like ſtorax. It muſt be choſen in a maſs, of a reddiſh colour, ſoft and fat, with an agreeable ſmell, bearing no reſemblance to liquid ſtorax. That in cakes and balls is alſo ſophiſticated; being only a wretched compoſition of liquid ſtorax, with the impurities of the true red ſtorax, and other drugs: that in powder is ſtill worſe. Red ſtorax is of ſome uſe in medicine; and is alſo uſed by the perfumers, as well as often ſubſtituted for frankincenſe.

STORAX *calamita*, thus called from the ruſhes, or quills, it was anciently brought in, is by ſome held to be only a compoſition of ſeveral excellent drugs, and among the reſt red ſtorax, whence its name; though authors have generally taken it for a natural gum, different from the red ſtorax. Hoffman conjectures, that it only differs from the other in age, the ſtorax growing higher coloured with keeping. It muſt be choſen in fine white tears, very dry, and not bitter; ſometimes it is in reddiſh maſſes, full of theſe whitiſh tears, only mixed with a ruddy ſubſtance. Theſe two kinds are eſteemed excellent pectorals, ſtomachics, and cephalics.

Liquid STORAX, is a kind of factitious reſin, of a greyiſh colour, compounded of true ſtorax, common reſin of the pine-oil, and wine, beaten with water into the conſiſtence of an unguent. The druggiſts call it alſo ſtacte, to diſtinguiſh it, and ſell it for the better price.

The beſt is that of Holland: it is eaſily kept in a cellar, by pouring water on it from time to time; and is an ingredient in an unguent, which experience has ſhewn to be excellent againſt the ſcorbutus and gangrene.

STORE, or *Stores*, ſignifies the proviſions, ammunition, &c. provided for a ſhip.

The premium or bounty on naval ſtores imported, was firſt granted by the 3d and 4th of Queen Anne, and by the 24th of George II. continued till 1757.

The ſeveral ſorts of naval ſtores hereafter mentioned, imported directly from any of the Britiſh plantations in America, in any ſhip that may lawfully trade, manned as by law is required, are to enjoy the following bounty.

Hemp, water-rotted, bright and clean, the tun, containing 20 C. wt. -	6 00
Maſts, *Yards*, and *Bowſprits*, the tun, allowing 40 feet to each tun, girt-meaſure, according to the cuſtomary way of meaſuring round bodies - - -	1 00
Tar, clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, the tun, containing 8 barrels, and each barrel to gauge 31½ gallons, to be well hooped and filled up	2 40
Tar, clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, made from trees prepared according to the directions hereafter mentioned, the tun, containing 8 barrels, and each barrel to gauge 31½ gallons, to be well hooped and filled up, on the importation thereof - -	4 00
Pitch, clean, good, merchantable, and well-conditioned, not mixed with dirt or droſs, the tun, containing 20 groſs C. neat pitch, to be brought in 8 barrels of equal ſize -	1 00
Turpentine, clean, good, and merchantable, clear of droſs and water, the tun, containing 20 groſs C. neat turpentine, to be brought in 8 barrels of equal ſize - - -	1 10 0

Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within 20 days after the diſcharge or unlading of the ſhip, in order to be paid in courſe; upon certificate of the reſpective chief officers of the cuſtoms where imported; to whom a certificate has been produced under the hands and ſeals of the governor, lieutenant-governor, or collector of his Majeſty's cuſtoms, and naval officer, or any two of them, reſiding within any of his Majeſty's ſaid plantations, teſtifying, that, before departure of the ſhip, the perſon lading the ſame had made oath before them, that the ſaid ſtores were truly and *bona fide* of the growth and produce of his Majeſty's ſaid plantations; and with reſpect to the high bounty on tar, expreſſing, that it has appeared to them, the perſons ſo certifying, by the oath of the owner, or maker of the tar for which ſuch certificate was granted, that the tar herein mentioned was made from green trees prepared for that purpoſe, after the following manner; that is to ſay, that when ſuch trees were fit to bark, the bark thereof was ſtripped 8 feet, or thereabouts, up from the root of each tree, a ſlip of the bark of about 4 inches in breadth having been left on one ſide of each tree; and that each tree, after having been ſo barked, had ſtood during one year at the leaſt, and was not before cut down for the making of tar; and that the ſaid tar was made without mixture of any other tar therewith: as likewiſe

likewiſe upon oath to be made by the maſter of the ſhip, at the port of importation in Great Britain, that the ſame were ſhipped within ſome of his Majeſty's plantations in America; and that he knows, or believes, that the ſaid ſtores were the produce of the ſaid plantations.

But the aforeſaid certificates of the chief officers of the cuſtoms are not to be made out for the premium on pitch, until the ſame be freed from dirt or droſs; nor for any tar that is not fitting to be uſed for making of cordage, and ſhall not be freed from droſs and water, and unleſs ſuch pitch and tar be clean, good, mercantile, and well-conditioned.

And the ſaid officers of the cuſtoms, before they make out ſuch certificates, are to examine the pitch, by opening the heads of the barrels, ſawing of the ſtaves in the middle, and breaking the barrels, or by ſuch other means as they ſhall think proper, to diſcover whether the ſaid pitch is good and merchantable, not mixed with dirt or droſs; and alſo to examine and ſearch the ſaid tar, to diſcover whether the ſame is clean, good, merchantable, well-conditioned, clear of droſs or water, and fit for making of cordage.

By the 12th of Queen Anne, the naval ſtores hereafter mentioned, imported from North Britain to South Britain, in any ſhip built in Great Britain, are to enjoy the following bounty.

Hemp, water-rotted, bright and clean, the tun, containing 20 C. wt. -	6 0 0
Trees of 12 inches diameter and upwards, fit for *maſts*, *yards*, and *bowſprits*, regularly converted, and hewed at leaſt into eight ſquares, ſound, freſh, and in good and merchantable condition, the tun, allowing 40 feet to each tun, girt-meaſure, according to the cuſtomary way of meaſuring round bodies -	1 0 0

Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within 20 days after the diſcharge or unlading of the ſhip, in order to be paid in courſe; upon certificates of the reſpective chief officers of the cuſtoms where imported, to whom a certificate has been produced, under the hands and ſeals of the comptroller and collector of the cuſtoms, and the naval officer, or any two of them, reſiding at the port or ports of exportation in North Britain, teſtifying, that before the departure of the ſhip, the perſons concerned, or employed in cutting down the aforeſaid trees, or any two of them, had made affidavit in writing before ſuch comptroller and collector, and naval officer, or any two of them, that ſuch trees were truly and *bona fide* of the growth and produce of North Britain; and ſpecifying in the ſaid affidavit the particular number, quantity, and qualities of the trees, together with the time when they were cut down, the names of the proprietors, and the places where the ſame did grow; as likewiſe, upon oath to be made by the maſter of the ſhip, at the port of importation in South Britain; and that the ſame were truly laden within North Britain; and that he knows, or believes that the ſaid trees were of the growth of North Britain.

Perſons counterfeiting, or making falſe affidavits or certificates of the growth of the trees or hemp, in order to obtain the premium, are to ſuffer as for wilful and corrupt perjury, and to forfeit 100 l.

Comptrollers, collectors, or naval officers, making falſe certificates, are to forfeit their office, and 50 l. to be impriſoned a year without bail, to ſuffer ſuch corporal puniſhment as the court of exchequer ſhall think fit, and to be incapable of ſerving again in the cuſtoms.

Maſters or owners of ſhips knowingly importing foreign trees fit for maſts, &c. as of the product of North Britain, in order to obtain the bounty, are to forfeit 100 l. together with the ſhip and furniture.

Upon the landing of the aforeſaid ſtores and trees, the pre-emption or refuſal muſt be offered and tendered to the commiſſioners of the navy; and if, within 20 days after ſuch tender, they ſhall not contract for the ſame, the importers may otherwiſe diſpoſe of them.

No fee, gratuity, or reward, may be demanded or taken by the officers of the cuſtoms, for the examining, viewing, or delivering any of the aforeſaid naval ſtores, or for making or ſigning certificates, in order to receive the premium; upon forfeiture of office and 100 l. and to be rendered incapable of ſerving his Majeſty.

And if any of the aforeſaid naval ſtores, except hemp or trees, ſhall be again exported, the exporter muſt, before entry thereof, produce to the collector, &c. of the cuſtoms, at the port of exportation, a receipt from the treaſurer of the navy, or his caſhier, ſubſcribed by his comptroller, or his chief clerk, ſignifying that the full amount of the aforeſaid premium had been repaid to him; on failure whereof, ſuch ſtores may not be exported: and if ſuch ſtores are fraudulently exported without repayment of the premium, they are forfeited, and double the value.

And if, upon the exportation of the aforeſaid ſtores, doubts ſhall ariſe concerning the growth, product, or manufacture, the *onus probandi* ſhall lie on the owner or claimer thereof.

Bill of STORE. See *Bill* of ſtore.

Naval STORES, are hemp, maſts, yards, bowſprits, pitch, and turpentine.

STOWAGE, in the ſea-language. The putting of goods orderly into the hold of a ſhip, the moſt ponderous next the ballaſt.

STRAIGHT, *Streight*, or *Strait*, in hydrography. A narrow ſea, or gut, ſhut up between lands on either ſide, and affording a paſſage out of one great ſea into another. See *Sea*, and *Ocean*.

The moſt celebrated ſtraight in the world, is that of Gibraltar, which is about 130 miles long, and 12 broad, joining the Mediterranean ſea with the Atlantic ocean. The ſtraights of Magellan, diſcovered in 1520 by F. Magellan, were uſed for ſome time as a paſſage out of the North into the South ſea: but ſince the year 1616, that the ſtraight of Le Maire has been diſcovered, the former has been diſuſed; both becauſe of its length, which is full 300 miles; and becauſe the navigation thereof is very dangerous, from the waves of the North and South ſeas meeting herein, and claſhing. The ſtraight at the entrance of the Baltic is called the Sound. See *Sound*.

That between England and France, Le Pas de Calais, or the Channel.

There are alſo the ſtraights of Babel-Mandel, of Weigats, of Jeſſo, of Anian, of Davis, and Hudſon.

STRAIGHT, is alſo uſed in geography for an iſthmus, or neck of land between two ſeas, preventing the communication thereof.

STRAINED *ſugar*. See *Sugar*.

STRAIT. See *Straight*.

STRALSUND. A ſtrong city and port-town of Germany, in the circle of Upper Saxony, and duchy of Pomerania, ſituated on the Baltic ſea, oppoſite to Rugen, in 13 deg. 22 min. of E. lon. and 54 deg. 23 min. of N. lat. 65 miles eaſt of Wiſmer, ſubject to Sweden.

STRAND, and *Stream*, in ancient cuſtoms. A freedom from all impoſitions upon goods and veſſels, by land or water.

STRANDED. When a ſhip is by tempeſt, or ill ſteerage, run on ground, and ſo periſhes.

STRANGFROD. A town of Ireland, which gives name to a lough and bay, in the county of Down, and province of Ulſter, ſituated in 54 deg. 24 min. of N. lat. 9 miles eaſt of Down.

STRAP, in a ſhip, is a rope ſpliced about a block, to faſten it any where that it is to be uſed.

STRASBURG. A city of Germany, in the circle of the Upper Rhine, capital of the landgravate of Alſace, ſituated in 7 deg. 75 min. of E. lon. and 48 deg. 38 min. of N. lat. near the weſt bank of the river Rhine, ſubject to France.

STREAM-*anchor*, is a ſmall anchor made faſt to a ſtream-cable, for a ſhip to ride by in gentle ſtreams, and in fair weather. See *Anchor*.

STRETCH. When at ſea they are going to hoiſt the yard, or hale the ſheet, they ſay, ſtretch forward the ſheets;

ſheets; meaning, that the part which the men are to hale by, ſhould be put into their hands, in order to their haling.

STRIKE, or *Stryke*. A meaſure, containing two buſhels.

A STRIKE *of flax*, is as much as can be heckled at one handful.

STRIKE, is a ſea-word variouſly uſed. When a ſhip in a fight, or upon meeting with a man of war, lets down or lowers her top-ſails, at leaſt half maſt high, they ſay ſhe ſtrikes; meaning, ſhe yields or ſubmits, or pays her reſpect to the man of war as ſhe paſſes by. See *Flag*.

And when any thing is let down, or lowered, into the hold, they call it ſtriking down into the hold. When a top-maſt is to be taken down, they ſay, ſtrike down the top-maſt. Alſo, when a ſhip touches ground in a ſhoal-water, they ſay, ſhe ſtrikes.

STROMBOLI. One of the Lipari iſlands, in the Neapolitan ſea, ſituated in 15 deg. 15 min. of E. lon. and 39 deg. 14 min. of N. lat. 50 miles north of Meſſina.

STUC, or *Stucco*, in building. A compoſition of white marble pulveriſed, and mixed with plaiſter and lime; the whole ſifted, and wrought up with water, to be uſed like common plaiſter; of which are made ſtatues, buſts, baſſo relievos, and other ornaments of architecture. See *Statue*.

STUFF, in commerce. A general name for all kinds of fabrics of gold, ſilver, ſilk, wool, hair, cotton, or thread, manufactured on the loom; of which number are velvets, brocades, mohair, ſattins, taffeties, cloth, and ſerges. See *Cloth*, *Velvet*, and *Brocade*.

STUFF, is particularly uſed for certain kinds of ſlight woollen ſtuffs, uſed principally for hangings, linings, and womens wear, as linſeys, ratteens, and the like: but for the drawback, ſee Drawback on *Silk*.

STUM. The flower of wine ſet a working: hence, to ſtum, is to put certain ingredients into ſick and decayed wine, in order to revive it, and make it briſk.

STURGEON. A large ſea-fiſh, which aſcends freſh water rivers; having its mouth pointed, belly flat, and back bluiſh.

There are ſturgeons of all ſorts of ſizes; but the ſmaller ſort is beſt for eating; and their roes are a conſiderable article in commerce. See *Cavia*, and Sturgeon *Fiſhery*.

STUYVER, or *Stiver*. The common ſol of Holland, worth 8 duyts, or 1 $\frac{1}{20}$ d. ſterling.

The ſtuyver of Cologn is 8 duyts, or $\frac{7}{10}$ d. ſterling, and the ſtuyver of Flanders is worth 2 grotes, or $\frac{27}{28}$ d. ſterling.

STYLE, in chronology, denotes a particular manner of accounting time, with regard to the retrenchment of ten days from the calendar year, in the reformation made thereof under Pope Gregory XIII. Style is either old or new.

Old STYLE, is the Julian manner of computing, which obtained in England till the year 1752, and is ſtill made uſe of in ſome proteſtant ſtates, who refuſed to admit of the reformation.

New STYLE, is the Gregorian manner, followed by the catholics, and others, in conſequence of that reformation. Hence there has ariſen a difference of ten days between the old ſtyle and the new, the latter being ſo much before-hand with the former; ſo that when the catholics reckoned the 21ſt of May, the Engliſh reckoned the 11th. The difference of ten days was increaſed in the year 1707 to eleven days, by reaſon that year was not the biſſextile in the old ſtyle, but was in the new; ſo that the 10th day of the one correſponded with the 21ſt of the other.

There are ſeveral places, however, where the new ſtyle has begun to obtain, even among proteſtants. At the diet of Ratiſbon, in 1700, it was decreed by the body of proteſtants of the empire, that eleven days ſhould be retrenched from the old ſtyle, to accommodate it for the future to the new; and the ſame regulation has ſince paſſed in Sweden and Denmark, and lately in England; ſo that it is probable the old ſtyle will ſoon dwindle quite away.

SUBJECT. A perſon under the rule and dominion of a ſovereign prince or ſtate: but of ſubjects, ſome are ſo by birth, and others by acts of naturalization. See *Alien*, *Denizen*, and *Naturalization*.

SUBLIMATE. A chemical preparation, the baſis whereof is mercury or quickſilver. See *Mercury*.

SUBLIMATION, in chemiſtry. An operation which differs little from diſtillation; except that in diſtillation only the fluid parts of bodies are raiſed, but in ſublimation the ſolid and dry; and that the matter to be diſtilled may be either ſolid or fluid: but ſublimation is only concerned about ſolid ſubſtances.

There is alſo another difference, namely, that rarefaction, which is of very great uſe in diſtillation, has hardly any room in ſublimation; for the ſubſtances which are to be ſublimed being ſolid, are incapable of rarefaction; and ſo it is only impulſe can raiſe them.

SUBREPTITIOUS, or *Surreptitious*. A term applied to a letter, licence, patent, or other act, fraudulently obtained of a ſuperior, by concealing ſome truth, which, had it been known, would have prevented the conceſſion or grant.

The benefit of letters, licences, grants, and patents, is forfeited, when they are found contrary to the informations given; they being then reputed ſubreptitious.

SUBSCRIPTION. The ſignature put at the bottom of a letter, writing, or inſtrument.

SUBSCRIPTION, in the Engliſh commerce, is uſed for the ſhare or intereſt which any particular perſons take in a public ſtock, or a trading company, by writing their names, and the ſhares they require, in the books of the regiſter thereof. See *Company*, and *Fund*.

The French have likewiſe adopted the word *ſubſcription*, uſing it in ſpeaking of the actions of their India company.

A ſubſcription differs from an action, in that the firſt is properly only an action begun, or an engagement, by making the firſt payment, to acquit the reſt in the time limited; and that the other is the whole action, performed in all its parts.

SUBSCRIPTION, in the commerce of books, ſignifies an engagement to take a certain number of copies of a book going to be printed, and a reciprocal obligation of the bookſeller and publiſher to deliver the ſaid copies on certain terms.

The uſual conditions of theſe ſubſcriptions are, on the part of the bookſeller, to afford the books cheaper to a ſubſcriber than to another, by 1-3d or 1-4th of the price; and on the part of the latter, to advance half the money in hand, and to pay the reſt on the delivery of the copies: an agreement equally advantageous to the one and the other; as the bookſeller is hereby furniſhed with money to carry on works, which would be otherwiſe above his ſtock; and the ſubſcribers receive, as it were, intereſt for their money, by the moderate price the book ſtands them in.

Subſcriptions had their riſe in England; and it is but very lately they are got into other countries. They were firſt ſet on foot in the middle of the laſt century, for the printing of Walton's Polyglott Bible, which was the firſt book ever printed by way of ſubſcription. From England they paſſed a few years ago into Holland, and are very lately introduced into France. F. Montfaucon's collection of antiquities was the firſt book publiſhed there by ſubſcriptions, which were ſo numerous that great numbers were refuſed. The ſame method has been ſince propoſed for the publication of St. Chryſoſtom by the Benedictines, but not with equal ſucceſs

The other books ſince printed in France by ſubſcription, are M. Dacier's tranſlation of Plutarch's lives; the deſcription of Verſailles; and F. Daniel's hiſtory of the French militia.

In England they are become exceedingly frequent; and their frequency has rendered them liable to ſome abuſes, which begin to diſcredit them.

SUBSIDY, in law. An aid, tax, or tribute, granted by authority of parliament to the King, on preſſing occaſions of ſtate, levied on the ſubjects according to their ſeveral abilities, or the yearly value of their lands and goods

Such is the land-tax, or royal aid, as it is called, which

is uſually at the rate 2, 3, or 4 s. in the pound for lands, and of 2 s. 8 d. for goods and perſonal eſtate, when of 4 s. for land.

The ancient Saxon kings had no ſubſidies collected after the preſent manner; having, inſtead thereof, ſeveral cuſtoms, whereby they levied money or perſonal ſervice on the people, for the repairing of cities, caſtles, bridges, and military expeditions; which they called burgbote, brigbote, herefare, and heregeld: but, upon the lands becoming oppreſſed by the Danes, King Ethelred, in the year 1007, agreed to pay them yearly 10,000 l. for redemption of peace; which ſum was afterwards increaſed to 36,000 l. and at length to 48,000 l. which was called Danegeld, and was levied on land; each hide, or plough-land, that of the church only excepted, being aſſeſſed 12 d. Hence the tribute came to be called hideage, a name that afterwards became common to all taxes and ſubſidies impoſed on lands; as thoſe on cattle were called hornegeld.

Both theſe the Normans ſometimes called taxes, from the Greek word ταξις, order; ſometimes from their own language *taillage*; and ſometimes according to the cuſtom beyond ſea, *ſubſidia*, and *auxilia*.

After the conqueſt, theſe ſubſidies ſeem to have been granted differently from what they now are; as every ninth lamb, every ninth fleece, every ninth ſheep, and the like. Sometimes the rate was every tenth, and ſometimes every fifteenth.

In the liſt of the Engliſh duties, or impoſitions, are divers kinds of ſubſidies; as old ſubſidy, additional impoſition to the old ſubſidy, new ſubſidy, third ſubſidy, and two-thirds ſubſidy. See *Duty*, and *Cuſtom*.

SUBSTITUTE, in medicine, denotes a drug, or remedy, that may be uſed inſtead of another, or that ſupplies the place of another of like virtue, which is not to be had; called alſo ſuccedaneum. See *Succedaneum*.

The root of the great centaury, and ſometimes rhaponticum, are uſed as ſubſtitutes to rhubarb.

SUBSTRACTION, or *Subtraction*, in arithmetic. The ſecond rule, or rather operation therein, whereby we deduct a leſs number from a greater, to learn the preciſe difference: or, more juſtly, ſubtraction is the finding a certain number from homogenous ones given; which, with one of the given numbers, is equal to the other. See *Arithmetic*.

SUBTILIZATION. The act of ſubtilizing, or rendering any thing ſmaller or ſubtiler; particularly, the diſſolving or changing a mixed body into a pure liquor, or a fine powder, by ſeparating the groſſer parts therefrom.

SUCCEDANEUM. A remedy ſubſtituted in the place of another firſt preſcribed, when the ingredients are wanting neceſſary for the compoſition of the other. See *Subſtitute*.

Subſtitute and ſuccedaneum are of the ſame import; unleſs, with ſome authors, we chuſe to uſe ſubſtitute, where a ſimple of like virtue is put for another; and ſuccedaneum, where a compound is uſed for the ſame purpoſe.

SUCCINUM, in pharmacy. A bituminous juice or reſin, which from a fluor grows hard and brittle. See *Amber*.

The whiteſt and moſt tranſparent is accounted beſt. It is of no great uſe in medicine by itſelf, as its texture ſeems too compact to open and yield to the natural concoctions; though ſome have a great opinion of it as a balſamic, and give it in gonorrhœas particularly. But what pharmacy extorts from it is of great efficacy, eſpecially in nervous caſes.

SUCCISA. A medicinal alexipharmic herb, called alſo *morſus diaboli*, or the devil's bit.

This is a powerful ſudorific; inſomuch that Sir Theodore Mayerne obſerves, in the Philoſophical Tranſactions, that laying a perſon ſick of the plague, or other malignant fever, on a bed thereof, moderately hot, he ſhall ſweat till they take him off; and much more, if he drinks of the decoction or juice of the herb: but the ſucciſſa is now little uſed.

SUCCOTRINE *aloes*. See *Aloes*.

SUDKOPPING. A Daniſh town, on the iſland of Falſter. See *Denmark*.

SUET. A kind of fat found in deer, ſheep, oxen, and hogs; which, when melted down and clarified, makes what is called tallow, uſed in the making of candles. See *Tallow*.

SUEZ. A port-town of Egypt, ſituated in 34 deg. 30 min. of E. lon. and 30 deg. of N. lat. at the bottom of the gulph called the Red ſea, 70 miles eaſt of Grand Cairo. See *Egypt*.

SUFFERANCE, is the ſame as permiſſion, allowance, leave, or forbearance. See *Permit*.

Bill of SUFFERANCE. See *Bill* of ſufferance.

SUGAR. A very ſweet agreeable juice, expreſſed from a kind of canes, or reeds, growing in great plenty in the Eaſt and Weſt Indies, particularly in Braſil, and the Caribbee iſlands. It is a queſtion not yet decided among botaniſts, whether the ancients were acquainted with this cane, and whether they knew how to expreſs the juice from the ſame? What we can get from the arguments advanced on either ſide is, that, if they knew the cane and the juice, they did not know the art of condenſing, hardening, and whitening it; ſo, of conſequence, knew nothing of our ſugar.

Some ancient authors indeed ſeem to mention ſugar under the name of Indian ſalt; but they add, that it oozed out of the cane of itſelf, hardened there like gum, and was even friable between the teeth, like our common ſalt; whereas ſugar is expreſſed by a machine on purpoſe, and coagulated by the fire. Theirs, Salmaſius tells us, was cooling and looſening; whereas ours, the ſame writer aſſerts, is hot, and excites thirſt. Hence ſome have imagined, that ancient and modern ſugar plants were different; but Mathiolus, on Dioſcorides, c. 75. makes no doubt they were the ſame; and others are even of opinion, that ours has a laxative virtue, as well as that of the ancients, and that it purges pituita.

The generality of authors, however, agree, that the ancient ſugar was much better than the modern; as conſiſting of only the fineſt and matureſt parts, which made themſelves a paſſage, and were condenſed in the air.

The interpreters of Avicenna and Serapion call ſugar ſpodium, the Perſians tabaxir, and the Indians mambu. Salmaſius aſſures us, that the Arabs have uſed the art of making ſugar, ſuch as we now have it, above eight hundred years.

Another queſtion among naturaliſts is, whether the ſugar-canes be originally of the Weſt Indies, or whether they have been tranſplanted rather from the Eaſt? The learned of theſe laſt ages have been much divided on the point: but, ſince the diſſertation of M. Labat, a dominican miſſionary, publiſhed in 1722, there is no longer room to doubt, that the ſugar-cane is as natural to America as India: all that can be ſaid in favour of the latter is, that the Spaniards and Portugueſe firſt learned from the Orientals the art of expreſſing its juice, boiling it, and reducing it into ſugar.

Culture of the SUGAR-*cane*. The reed, or cane, from whence this uſeful juice is drawn, reſembles thoſe others we ſee in moraſſes, and on the edges of lakes; excepting that the ſkin of theſe latter is hard and dry, and their pulp void of juice: whereas the ſkin of the ſugar-reed is ſoft, and the ſpongeous matter, or pith, it contains, very juicy; though that in a greater or leſſer degree, according to the goodneſs of the ſoil, its expoſure to the ſun, the ſeaſon it is cut in, and its age; which four circumſtances contribute greatly to its goodneſs and its bulk.

The ſugar-cane uſually grows five or ſix feet high, and about half an inch in diameter; though F. Labat mentions ſome extraordinary ones in the iſland of Tobago 24 feet high. The ſtem or ſtalk is divided by knots, a foot and half apart. At the top it puts forth a number of long, green, tufted leaves, from the middle whereof ariſe the flower and the ſeed. There are likewiſe leaves ſpringing out from each knot; but theſe uſually fall as the cane riſes; and it is a ſign either that the cane is bad, or that it is far from its maturity, when the knots are ſeen beſet with leaves.

The ground fit for ſugar-canes, is that which is light, ſoft, and ſpongy; lying on a deſcent proper to carry off the water, and well turned to the ſun. They uſually plant them in pieces, cut a foot and a half below the top of the flower. Theſe are ordinarily ripe in ten

months

months, though ſometimes not till fifteen; at which time they are found full of a white ſucculent marrow, whence is expreſſed the liquor whereof ſugar is made. When ripe, they are cut, their leaves cleared off, and they are carried in bundles to the mills. The mills conſiſt of three wooden rollers, covered with ſteel plates; and have their motion either from the water, the wind, cattle, or the hands of ſlaves. See Sugar-*Mill*.

Two rules belonging hereto are, that no canes above four feet, or under two feet and a half long, be ſent to the mills; and that no more canes be cut than can be conveniently preſſed in 24 hours, in regard they will heat, ferment, and turn ſour.

Preparation of SUGAR. The juice coming out of the canes, when preſſed and broke between the rollers, runs through a little canal into the ſugar-houſe, where it is purified by repeated boilings; and, thus paſſing ſucceſſively a number of coppers, the juice is thickened, and rendered fit to be converted into any of the kinds of ſugar hereafter mentioned.

The ſize of the ſeveral coppers always diminiſhes, from the firſt to the laſt; each being furniſhed with a furnace, to give a heat proportionable to the degree of coction the juice has received. In ſome large ſugar-works, there are alſo particular coppers for the boiling and preparing the ſcums.

F. Labat mentions ſeveral different kinds of ſugar prepared in the Caribbees; ſuch as crude ſugar, or moſcovado; ſtrained, or brown ſugar; earthed, or white ſugar, in powder; refined ſugar, either in powder or loaves; royal ſugar; candied ſugar; ſugar of fine ſyrop; ſugar of coarſe ſyrop; and ſugar of the ſcum.

Crude SUGAR, or *moſcovado*, is that firſt drawn from the juice of the cane, and whereof all the reſt are compoſed.

Strained, or *Brown* SUGAR, though whiter and harder, does not differ much from the crude ſugar; but it is held a medium between this laſt and the earthed ſugar, which is the white powder-ſugar.

The invention of ſtrained ſugar is owing to the Engliſh, who are more careful than their neighbours in the preparation hereof; for they not only ſtrain it, but, when boiled, put it in ſquare wooden moulds of a pyramidical figure; and, when it has purified itſelf well, they cut it in pieces, dry it in the ſun, and barrel it up.

Earthed SUGAR, is that which is whitened by means of earth laid upon the top of the forms it is put in, to purge itſelf.

SUGAR *of the ſcum*. This is all made of the ſcum of the two laſt coppers; thoſe of the former being reſerved for making of rum.

The ſcum deſtined to make ſugar, is kept in a veſſel for that purpoſe, and boiled every morning in a copper ſet apart for that uſe: with the ſcum is put into the copper a fourth part of water, to retard the boiling, and give time for its purging: when it begins to boil, the uſual lee is put in, and it is carefully ſcummed; when almoſt enough boiled, lime and alum water are thrown in; and when it is ready to be taken out, they ſprinkle it with a little powdered alum.

SUGAR *of ſyrop*, or *treacle*. There are three kinds of ſyrops that run from ſugar; the firſt, from the barrels of raw ſugar, which is the coarſeſt of all; the ſecond, from the forms or moulds, after they are perforated, and before they receive their earth; the third, that coming from the forms after they have had their earth; which laſt is the beſt.

The coarſe ſyrops ſhould only be uſed for rum; but, ſugar being grown dear, endeavours have been uſed to make ſome hereof, and that with tolerable ſucceſs. They are firſt clarified with lime-water; and, when boiled, are put up in barrels, with a ſugar-cane in the middle, to make them purify themſelves; after 20 days, a quantity of coarſe earth is thrown in, to make them caſt the remainder of their ſyrop, and fit them to be returned into a crude ſugar. The Dutch and German refiners firſt taught the iſlanders how to turn their treacle into ſugar.

Refined SUGAR. Crude ſugar, ſtrained ſugar, and the heads or tops of loaves that have not been whitened well, are the baſis or ground of this ſugar. In the refiner are uſually two coppers, the one ſerving to clarify, the other to boil the clarified liquor; though they ſometimes clarify in both, and boil afterwards. For the operation of refining, the ſame weight of lime-water and ſugar are put into the copper; and as the ſcum is raiſed by the heat, it is taken off; and when it ceaſes to riſe any more, the ſyrop is ſtrained through a cloth: after this it is clarified, by throwing in a dozen of eggs, white, yolk, ſhell, and all, having firſt broke and beaten them well in lime-water. When the fat, and other impurities of the ſugar, which this compoſition gathers together on the ſurface of the ſyrop, have been ſcummed off; a few more eggs are thrown in, and it is ſcummed afreſh; which method they repeat till the ſugar is well clarified; and, this done, it is again ſtrained through the cloth.

When taken out of this copper, it is boiled in a ſecond; which done, it is put out into coolers, the bottoms whereof are firſt covered half an inch with fine white powdered ſugar: as ſoon as it is there, it is briſkly ſtirred about, and the ſurface ſtrewed over with powder-ſugar. The reſt is performed as in ſugars of ſyrops, or as in earthed ſugar; only more care and exactneſs muſt be uſed. See *Refining*.

Royal SUGAR. The baſis of this ſort ought to be the fineſt refined ſugar that can be found, which they melt with a weak lime-water; and ſometimes, to make it the whiter, and prevent the lime from reddening it, they uſe alum-water: in this manner they clarify it three times, and paſs it as often through a cloth, uſing the very beſt earth. Thus prepared, it is whiter than ſnow, and ſo tranſparent that we ſee a finger touching it, even through the thickeſt part of the loaf.

SUGAR-*candy*, is ſugar depurated and chryſtallized. This is better made of earthed than refined ſugar, becauſe the former is ſweeter. The ſugar to be uſed herein, is firſt diſſolved in a weak lime-water, then clarified, ſcummed, ſtrained through a cloth, and boiled; after which it is put into forms or moulds that are traverſed with little rods, to retain the ſugar as it chryſtallizes. Theſe forms are ſuſpended in a hot ſtove, with a pot underneath to receive the ſyrop that drops out at the hole in the bottom, which is half ſtopped, that the filtration may be the gentler. When the forms are full, the ſtove is ſhut up, and the fire made very vehement: hereupon the ſugar faſtens to the ſticks that croſs the forms, and there hangs in little ſplinters of chryſtal. When the ſugar is quite dry, the forms are broke, and the ſugar taken out and candied. Red ſugar-candy they make, by caſting into the veſſel where the ſugar is boiling, a little of the juice of the Indian fig; and if it is deſired to be perfumed, they caſt a drop of ſome eſſence in, when the ſugar is putting into the forms. This method of making ſugar-candy is that mentioned by F. Labat as practiſed in the Caribbees: but the method in Europe, deſcribed by Pomet, is ſomewhat different.

White SUGAR-*candy*, is made of white refined ſugar, boiled with water into a thick ſyrop, in a large pan, candied in a ſtove, where it is carried, incloſed in braſs peels, croſſed with little rods, about which the chryſtals faſten, as they are formed. The fire of this ſtove is kept equable for 15 days; after which the ſugar is taken out of the peels to be dried. Red or brown ſugar-candy is made like the white, except that they only uſe brown ſugar and earthen pots.

Barley-SUGAR, is a ſugar boiled till it is brittle, and then caſt on a ſtone anointed with oil of ſweet almonds, and formed into twiſted ſticks, about the length of the hands, and the thickneſs of the finger: but it ſhould be boiled up with a decoction of barley, whence it takes its name; though, inſtead thereof, they now generally uſe common water, to make the ſugar finer; and, to give it the brighter amber colour, they ſometimes put a little ſaffron into it. This is found very good for the cure of colds and rheums.

SUGAR *of roſes*, is white ſugar clarified, and boiled into a conſiſtence in roſe-water. When boiled, they form it into lozenges, ſometimes into little grains, of the ſize of peas, by keeping it ſtirring till it is cold and dry. This is

is reputed good to ſoften and allay acrimonies of the lungs and breaſt.

It is univerſally allowed, that the Britiſh ſugar colonies are of the greateſt conſequence and advantage to the trade and navigation of Great Britain; but yet it may not be amiſs to ſtate to the public in what that advantage conſiſts; becauſe it may ſerve to ſet them in a better light, and give a different notion of the nature of that traffic, than what has hitherto been offered to the conſideration of thoſe whoſe particular ſtations appoint them to redreſs all manner of grievances.

By the beſt computation which can be made, the ſugar-colonies, on an average, annually produce 85,000 hogſheads of ſugar, of 1000 lb. wt. each, which uſually clear to the planter, when ſugars bear a middling price, 10 l. a hogſhead, amounting to 850,000 l. This ſum, or much the greateſt part of it, is ſpent in England, by the ſeveral proprietors of eſtates in the Weſt Indies, who live there; or is ſent out annually in the manufactures of Great Britain, either directly to the ſugar-colonies, or to the coaſt of Guinea, to purchaſe negroes for the uſe of theſe colonies.

Beſides this neat produce of ſugar, another great advantage ariſes from the ſugar-colony trade, and that is, the great number of ſhips and ſeamen, employed and maintained in the courſe of the Britiſh commerce with them. As near as can be calculated, there are 300 ſail of ſhips ſent from Great Britain, not to mention thoſe from other places, every year to the ſugar-colonies, which are navigated by about 4500 ſeamen; and the freight from the ſugars brought home amounts to 170,000 l. *per annum*; the duty and commiſſions to little leſs than 200,000 l. more, for the duty amounts to 4 s. 10 d. the hundred weight; which, upon the whole, is a good 1,200,000 l. a year profit and advantage to Great Britain. So that Sir Joſiah Child juſtly obſerved, "That it is in his Ma-"jeſty's power, and the parliament's, if they pleaſe, by "taking off all charges on ſugar, to make it more en-"tirely an Engliſh commodity than white herrings are "a Dutch commodity, and to draw more profit to the "kingdom thereby than the Dutch do by that; and "that, in conſequence thereof, all plantations of other "nations muſt in few years ſink to little or nothing."

At preſent, the Britiſh ſugar-iſlands are in a very bad and languiſhing condition, their duties high, their plantations poor, their ſoil worn out, and their fortifications deſtroyed: beſides, the French ſugar-iſlands are much larger, more fruitful, better inhabited, pay leſs duties, and have much greater encouragement from France, than the Britiſh colonies have from Great Britain.

If the Britiſh ſugar-iſlands, for want of being put into a poſture of defence, ſhould either be taken, as ſome have been, or moulder away, and come to ruin, it would be one of the greateſt blows the Britiſh nation could receive: it would then loſe the benefit of all their product imported home; it would loſe the exports of its woollen and other manufactures thither, to the amount of ſeveral hundred thouſand pounds a year; it would loſe in a great meaſure the trade to Guinea; it would loſe the maintaining and employing of many hundred ſhips, and many thouſand Britiſh ſeamen, every year; and, laſtly, it would loſe one of the moſt conſiderable and main branches of its funds; the deficiency of which muſt be made good, and the weight and burden fall entirely upon the land and trade of Great Britain.

Now, if it can be proved, that the Britiſh ſugar-colonies, upon a proper encouragement, might be improved ſufficiently to make as much more rum and ſugar as they do; it will follow, that the Britiſh ſugar-colonies may take off all the New England lumber.

Barbadoes, one of the Britiſh ſugar-colonies, is allowed to be at its perfection, and perhaps incapable of being further improved ſo as to increaſe its annual product.

Antigua is capable of further improvement, and may enlarge its product of ſugar, according to the beſt computations, at leaſt one-fifth part annually. As to the product of rum there, it may certainly be enlarged near one-half upon proper encouragement: for the rum it now makes is not quite one-half of its product of ſugar; that is to ſay, if Antigua makes 20,000 hogſheads of ſugar a year, its product of rum is not quite 10,000. But it is evident, from the experience of Barbadoes, that out of 20,000 hogſheads of ſugar, there ought to be made 14,000 hogſheads of rum; and this increaſe, both of ſugar and rum in Antigua, would certainly be made, if there was proper encouragement.

Montſerat, Nevis, and St. Chriſtopher's, for want of encouragement, ſeldom make one hogſhead of rum for three hogſheads of ſugar; whereas it is evident, by the experience of Barbadoes, that three hogſheads of ſugar ought to produce two hogſheads of rum; conſequently the product of rum in theſe three iſlands might be, upon proper encouragement, advanced to as much more as it now is. Add to this, the improvement to be made in thoſe iſlands, by which the quantity of ſugar would be increaſed; it will follow ſtill further, that the quantity of rum which thoſe iſlands are capable of making would be as much more as they make at preſent, and conſequently the demand for lumber would be proportionable.

Jamaica, the largeſt of all the Britiſh ſugar-colonies, nay bigger than all the reſt put together, is yet in its infancy; having now as much land uncultivated as would produce above three times more than it does at preſent, were it cultivated, as it certainly would be upon proper encouragement.

It appeared by the cuſtom-houſe books, that all the Britiſh colonies annually produce about 100,000 hogſheads of ſugar, and they ought in proportion to make 70,000 hogſheads of rum.

A gentleman, who reſided a long time in the Weſt Indies, has affirmed, that the Engliſh ſugar-colonies, under their preſent improvement, annually make 40,000 hogſheads of rum; and could make, had they a demand for them, above 50,000 hogſheads in the ſame ſpace of time, beſides what thoſe large tracts of uncultivated land would produce, if the inhabitants met with proper encouragement to till them; for in the ſugar-colonies, which lie at ſo great a diſtance from each other, and are rivals in this point of trade, by the production of the ſame commodities, a monopoly is impracticable. There is little or no intercourſe, or leſs commerce, between thoſe of them that are ſituated neareſt to the others, and no intercourſe at all between the remoteſt of theſe iſlands; becauſe the produce of them all being the ſame, there can be no exchange of commodities, and conſequently no commerce or intercourſe.

The average-price upon the muſcovado ſugars of different qualities in 1749, was 26 s. 6 d. the hundred weight; in 1750 it was 30 s. the hundred; in 1751 it was 29 s. in 1752 it was 32 s. and in 1753 the average-price was augmented to 40 s. the hundred weight, which was occaſioned by hurricanes in the ſugar-colonies.

Drawback on Britiſh refined ſugar. By the ſtatute of the 9th and 10th of William III. it was enacted, That upon the oath of the refiner, that it was produced from brown and muſcovado ſugars, which he verily believes were imported from the Britiſh plantations in America, the duty thereof duly paid at importation, and that the ſame was duly exported; and upon the ſearcher's certificate of the ſhipping and performance of other requiſites of law, according to the book of rates, there muſt be repaid out of the new ſubſidy, for every hundred weight exported, the ſum of 3 s.

By the 2d and 3d of Anne, that out of the one-third ſubſidy, for every 100 weight ſo exported, there ſhould be an allowance of 1 s.

By the 6th Geo. II. a further allowance of 2 s. was granted for every 100 weight exported. The two former allowances of 3 s. and 1 s. to continue during the new and one-third ſugar ſubſidies, on the importation of brown and muſcovado ſugars.

By the ſtatute of the 12th of George II. for granting a liberty to carry ſugars of the growth, produce, or manufacture of any of his Majeſty's ſugar-colonies in America, from the ſaid colonies directly to foreign parts, in ſhips built in Great Britain, and navigated according to law; it was enacted, That any of his Majeſty's ſubjects, in any veſſel built in Great Britain, and navigated according

cording to law, and belonging to his Majeſty's ſubjects, of whom the major part ſhould be reſiding in Great Britain, and the reſidue reſiding either in Great Britain, or ſome of the ſaid ſugar-colonies, and not elſewhere, that ſhould clear outwards in any port of Great Britain, for any of the ſaid colonies, might load in the ſaid colonies any ſugars, of the growth and manufacture of the ſaid colonies, and might carry the ſame to any foreign part of Europe; provided a licence was firſt taken out for that purpoſe under the hands of the commiſſioners of the cuſtoms at London or Edinburgh, ſubject to ſuch regulations and conditions as are hereafter mentioned. That in ſuch caſe no tobacco, melaſſes, ginger, cotton, wool, indigo, fuſtic, or other dying wood, tar, pitch, turpentine, hemp, maſt-yards, bowſprits, copper ore, beaver-ſkins, or other furs, of the growth and manufacture of any Britiſh plantation in America, ſhould be taken on board ſuch ſhip, unleſs for the neceſſary proviſions in her voyage; and that ſuch ſhip, before ſhe proceeds to any foreign part, ſhould touch at ſome port in Great Britain; and that the maſter or commander ſhould deliver to the collector and comptroller of ſuch port, a true manifeſt, atteſted upon oath, or affirmation, of the lading, mentioning the marks, numbers, package, and contents of all the goods on board; and ſhould alſo bring back the ſaid licence, with a certificate indorſed, or affixed thereto, containing an account of the marks, number, package, contents, and ſorts of ſugar on board ſuch ſhip, in the manner hereafter directed; and that when ſuch ſhip hath diſcharged her lading, the danger of the ſeas and enemies excepted, ſhe ſhould return to Great Britain within eight months after ſhe has delivered her lading in any foreign part, and before ſhe returns to any of the plantations in America; and that in caſe ſuch veſſel ſhould take on board any merchandiſe, before her return to Great Britain, all ſuch merchandiſes, that ſhould remain on board the ſaid ſhip on her arrival in Great Britain, ſhould be entered and landed, in like manner as other ſhips importing goods into the kingdom, are obliged to do by the laws of the cuſtoms, or otherwiſe ſuch bond ſhould be forfeited. That one of the ſaid copies ſhould be tranſmitted to the commiſſioners of the cuſtoms in Great Britain, by whom the licence was granted, when the ſhip ſailed from Great Britain, and the maſter ſhould proceed from the ſaid colonies directly to Great Britain, without putting into any other port, unleſs forced by ſtreſs of weather; proof whereof ſhould be made on oath to the ſatisfaction of the commiſſioners; and, on return of ſuch ſhip to Great Britain, the maſter ſhould produce the ſaid licence to the commiſſioners, or to the collector of the port to which he ſhould arrive, with the endorſement or certificate annexed, as before directed; and ſhould alſo deliver a true manifeſt, expreſſing the marks and numbers, with the tale and ſorts of caſks of his lading, atteſted upon oath, or, if a quaker, by affirmation, before the collector and comptroller of ſuch port, who are empowered to adminiſter the ſame; and ſhall alſo make an entry of the quantities and ſorts of all the ſugars laden on board the ſaid ſhip at any of the ſaid colonies, and then remaining on board, and bound to foreign parts; which entry the ſaid collector or comptroller are to paſs without demanding any duties for ſuch ſugar, mentioned in the accounts; and ſhould alſo declare on oath or affirmation to what foreign ports he was bound with ſuch lading; then ſuch maſter ſhould be at liberty to proceed with all the goods on board, mentioned in the ſaid manifeſt, being none of the goods before enumerated, to any foreign port, without being obliged to land, or pay duty for the ſame, as aforeſaid; taking with him the ſaid licence, and a certificate under the ſeals of office, from the ſaid comptroller or collector, teſtifying that the ſaid ſhip had touched at ſuch port, and had in all reſpects complied with the directions of this act. But if any ſuch veſſel ſhould proceed to any part, without having firſt touched at ſome port in Great Britain, and having complied with the directions of this act, and having the ſame certified as aforeſaid; or if any of the goods before enumerated, beſides ſugars, ſhould be found on board, or carried by any ſuch veſſel to any foreign parts; then the liberty granted by ſuch licence ſhould become void; and ſuch veſſel, and alſo the maſter and all others concerned ſhould be liable to the ſame penalties, as they would have been liable to, if this act had not been made. That if the maſter, or perſon taking charge of ſuch veſſel, for which a licence has been granted, ſhould, on his arrival in any of the ſaid ſugar colonies, have delivered to the comptroller, and naval officer, the ſaid licence, with a certificate or bond being given in Great Britain as aforeſaid; and before he lades any goods, ſhould declare in writing upon oath or affirmation before any two of them, that the ſugars he intends to load are to be carried to ſome place to the ſouthward of Cape Finiſterre, then the ſaid maſter may, in caſe he has in all reſpects complied with the directions of this act, proceed thither directly with ſuch veſſel, taking with him ſuch licence, and oath, or affirmation, endorſed thereon by the collector, together with an account of the marks of ſugars laden, by virtue of ſuch licence, likewiſe endorſed thereon, or contained in a certificate annexed, in the manner as before directed; and may there land the ſame, without firſt touching at any port in Great Britain. But that in ſuch caſe the maſter ſhould, within eight months after landing the ſaid ſugars, and before ſuch veſſel ſhould go again to any of the plantations in America, return to ſome port of Great Britain, and there deliver his ſaid licence to the commiſſioners, or the collector and comptroller of ſuch port, with ſuch oath or affirmation endorſed thereon, and certificate annexed thereto as aforeſaid, together with a certificate from the conſul, or two known Britiſh merchants of good credit reſiding at the places where ſuch ſugars were landed, teſtifying the landing thereof as aforeſaid; and the maſter ſhould alſo make oath or affirmation before the collector to the truth of ſuch certificate.

By the 24th of K. Geo. II. the above act is to be in force till the 1ſt of September 1757.

SULPHUR, in natural hiſtory, a fat, unctuous ſort of mineral ſubſtance, fuſible, and inflammable by fire, and not diſſolub'e or miſcible in water; which is particularly called foſſil or mineral ſulphur, to diſtinguiſh it from the ſulphur of metals, or of the philoſophers.

Sulphurs make a particular claſs of foſſils, divided into ſolid and fluid. Solid ſulphurs are common ſulphur, or ſulphur properly ſo called, arſenic, and amber.

Liquid ſulphurs are aſphaltum, piſſaſphaltum, bitumen, petroleum, naphtha, and oleum terræ.

SULPHUR, properly ſo called, or *Brimſtone*, is of two kinds, vivum, and common ſulphur.

SULPHUR *Vivum*, *Native* or *Virgin Sulphur*, is that which is dug in this form out of the earth; being opake, and of a yellow or aſh colour; it eaſily takes fire, and, in burning, caſts a ſtrong ſulphurous ſmell. It is chiefly imported from Sicily, and is but little uſed, except in ſome galenical compoſitions, and to ſulphur-wine, in order to make it keep in carriage. It is found in great quantities in the neighbourhood of volcanos or burning mountains, as Veſuvius and Ætna; yet ſulphur has alſo its particular mines, and we have very good from ſeveral parts of Italy and Switzerland, tho' the beſt is that of Quito, and Nicaragua, in America.

Common SULPHUR, or that uſed in gun-powder, and on many other occaſions, is ſaid by ſome to be a compoſition of the native ſulphur with roſin, rolled up in cylindrical pieces. Tho' others aſſure us it is procured from the native ſulphur by means of fire and train oil, which diſſolves it when it is poured into moulds, and formed into thoſe cylinders in which we find it. This common ſulphur is either better or worſe, according to the refinery it comes from: that of Holland has had the repute for a long time; that of Venice is placed in the ſecond claſs; and in the third that of Marſeilles: but the order ſeems to have been ſince changed, and that from Marſeilles now claims the priority. It is choſen in large thick cylinders, of a golden yellow colour, very brittle, and when broke, appearing all brilliant, as if chryſtallized.

Beſides the uſe of ſulphur in the compoſition of gun-powder, whereof it is one of the three ingredients, and that which makes it take fire ſo readily, it is of ſome uſe in medicine

medicine, and more in chemiſtry. It is alſo uſed in whitening ſilken and woollen ſtuffs; to which end, the vapour thereof is contrived to be received by them.

Flowers of SULPHUR, are the pureſt and fineſt part of common ſulphur, gained by evaporation, by ſublimation, or burning it in pots made for that purpoſe; and gathered in the capital of the cucurbit, where the vapour ſticks.

The beſt flower of ſulphur is in cakes, or pieces, light, ſoft, friable, and rather white than yellow. If it is in powder it muſt be very fine, of a yellow colour, that is, both whitiſh and gilt at the ſame time; inſtead of which, we have frequently put upon us a vile ſulphur, mixed with ſtarch, or wheat flour, and ſometimes only ſulphur duſt well ſifted.

Magiſtery, balm, or milk of SULPHUR, is ſulphur diſſolved in a ſufficient quantity of water, with ſalt of tartar, and precipitated by means of ſpirit of vinegar, or ſome other acid. It is called milk of ſulphur from its whiteneſs; and balm of ſulphur, or of the lungs, from its excellent uſe in diſeaſes of the lungs and breaſt.

Raw and refined ſulphur, are ſold at Amſterdam by the quintal of 100 lb. the tare is purſuant to the weight, and the deductions are equally 1 *per cent.* for good weight and prompt payment. The price of raw ſulphur is 10 s. 6 d. ſterling the quintal; and that of refined 12 s. 3 d. ſterling.

Salt of SULPHUR, is a chemical preparation, very improperly ſo called; as being no other than ſal polychreſton, impregnated with ſpirit of ſulphur, and reduced to an acid ſalt by evaporating the humidity thereof. Some hold it a powerful febrifuge. See *Salt*.

Spirit of SULPHUR. See *Spirit*.

SULPHUR *of antimony*, is a diaphoretic tincture drawn from antimony, and ſalt of tartar, by ſeveral operations. See *Antimony*.

That drawn from the fæces of *crocus metallorum*, is by ſome called golden ſulphur.

SULPHUR *metallorum*, or *Sulphur of metals*, called alſo *Sulphur figens*, is uſed among chemiſts and alchymiſts for a peculiar matter, which enters the compoſition of all metals.

Metals are ſuppoſed to conſiſt of two eſſential parts or principals; mercury, as the baſis, or metalic matter; and ſulphur as the binder, or the cement which fixes the fluent mercury into a coherent malleable maſs. Some of the lateſt and beſt chemiſts, particularly Monſieur Homberg, will have this ſulphur to be no other than fire.

SULPHURATED *wine*. See *Wine*.

SULTAN, or *Soldan*. A title or appellation given to ſeveral Aſiatic princes, particularly the emperor of the Turks. It had its riſe under Mahmoud, ſon of Sebecteghin, the firſt emperor of the dynaſty of the Gaznevides, towards the cloſe of the 4th century of the æra of the Hegira, when that prince going to Segeſtan to reduce Kalaf, governor of that province, who affected the ſovereignty, Kalaf was no ſooner adverti ſed of his coming, than he went out to meet him, delivered the keys of his fortreſs, and owned him his Sultan, that is, his lord and commander. The title pleaſed Mahmoud ſo well, that he aſſumed it ever afterwards; and from him it paſſed to his deſcendants, and other Mahometan princes.

SULTANA. The wife of a Sultan; but it alſo denotes a ſtrong Turkiſh ſhip of war.

SULTANIN. A gold coin ſtruck at Cairo, and current throughout the Grand Signior's territories. See *Sequin*.

SUM, in mathematics, ſignifies the quantity that ariſes from the addition of two or more magnitudes, numbers, or quantities together: and it alſo implies a large parcel of money.

SUMACH. A drug uſed to dye in green; as alſo in the preparation of black morocco, and other leather. It conſiſts of the leaves and young branches of a ſhrub, not unlike the little ſervice tree: the leaves are longiſh, pennated, and hairy; the flowers grow in cluſters, and are red like roſes: the fruit is a kind of grape, of a very aſtringent quality, and its ſeed almoſt oval, incloſed in capſulæ of the ſame figure. The ancients uſed them inſtead of ſalt, to ſeaſon their meat, whence the Latins call the tree *rhus obſoniorum*: from its uſe in dreſſing of leather, it is alſo called *rhus coriaria*.

The beſt ſumach is that which is greeniſh, and new; Oporto, in Portugal, being the place which furniſhes the moſt, and generally ſpeaking the beſt.

SUMATRA. An iſland in the Indian ocean. See *Sunda* Iſlands.

SUMMER, or *Bermuda* Iſlands. See *Britiſh* America.

SUMMERS. A particular kind of herrings. See *Herring*.

SUNDA *Iſlands*, are ſituated in the Indian ocean, between 93 and 120 deg. of E. lon. and between 8 deg. N. and 8 deg. of S. lat. comprehending the iſlands of Borneo, Sumatra, Java, Bally, Lomboe, and Banca: but the Portugueſe call them the South Iſlands, and include therewith the Moluccas and Philippines.

1. The iſland of *Borneo* is ſituated between 107 and 117 deg. of E. lon. and between 7 deg. 30 min. of N. lat. and 4 deg. of S. lat. the form of the iſland being almoſt round, and computed to be 2,500 miles in circumference, containing conſequently a greater number of acres than any other iſland in the known world. The Indian ocean ſeparates it from China and India on the north and north-weſt, and from the Philippine iſlands on the north-eaſt: the iſland of Celebes, or Macaſſer, lies on the ſouth-eaſt of Borneo, Java on the ſouth, and the iſland of Sumatra on the weſt.

The harbours of greateſt note, and to which Europeans uſually reſort, are Banjar Maſſeen, Succadana, and Borneo; but much more to Banjar Maſſeen than to either of the other; the greateſt quantities of pepper growing towards the ſource of that river, which falls into the ſea in 3 deg. 18 min. of S. lat.

The town of Banjar formerly ſtood about 12 miles up the river; but there is now no ſign of a town there, the inhabitants being removed to Tatas, about 6 miles higher.

The city of Borneo, formerly the reſidence of the principal ſultan, or king of the iſland, lies on the N. W. part of the iſland, in 4 deg. of N. lat. and is a very commodious harbour. The port of Succadana lies on the weſt-ſide of the iſland, in 15 min. of S. lat. and was formerly more reſorted to by Europeans than any other. Over againſt this, on the eaſt-ſide of the iſland, ſtands another ſea-port town, called Paſſeir, in 15 min. of S. lat. but it is not a place of any great trade.

One of the moſt conſiderable inland towns is Caytonge, whoſe Sultan is now the moſt potent prince in the iſland. This city lies about 100 miles up the river Banjar; and about 200 miles higher ſtands the town of Negaree, the reſidence of another ſultan.

The names of the other principal towns are, Tanjongbuoro, Sedang, Tanjongdatoo, Sambas, Landa, Piſagadan, Cota-panjang, Sampit, Tanjong, Selatan, Gonwarengen, and Pomanoocan.

The river Banjar, where European ſhips uſually lie, is as broad again as the Thames at Graveſend, towards the mouth; and the banks being planted with thick groves of evergreens renders the paſſage up it exceeding pleaſant.

The people of this iſland are divided into Mahometans and Pagans; the former inhabit the ſea-coaſts, and all the chief towns of trade; and the pagans, who are called Byayos, poſſeſs the inland country. The Banjareens, and other Moors, who inhabit the ſea-coaſts, are generally of a quick apprehenſion, extremely inquiſitive, and will learn any thing with a great deal of eaſe. The Byayos, who inhabit the woods and mountains, ſeldom apply themſelves to trade; being a robuſt warlike people, who ſpend their time chiefly in hunting, and looking after their cattle.

The goods which Europeans get from this country, are chiefly pepper, gold, and precious ſtones; as alſo ſome other valuable commodities. The goods fit to be imported here, are dollars, guns from 1 to 200 weight, ſheet lead, ſhowy calimancoes, knives, and other cutlery ware, iron bars, ſmall ſteel bars, hangers, the ſmalleſt ſort of ſpike nails, twenty-penny nails, graplings of about 40 lb. weight, red-leather boots, ſpectacles, clock-work, ſmall arms with braſs mounting, blunderbuſſes, ordinary horſe-piſtols, gun-powder, and looking-glaſſes.

The trade to Borneo might become as advantageous to the Engliſh as any trade whatever; becauſe Engliſh traders may meet the China fleet here, and be ſupplied with the goods of that country upon as eaſy terms as in

China: and, conſidering how much more time the voyage to China requires, the cuſtoms, port-charges, and other extraordinary ſums, extorted by the hoppos, or cuſtom-houſe officers, perhaps China goods may be had at a better hand here than in China. Beſides, about the latter end of September every year, the Maccaſſar praws come to Borneo, which, notwithſtanding the vigilance of the Dutch, ſtill bring over cloves, nutmegs, mace, gumboage, lignum aloes, caſſia, and other rich merchandiſe.

If ſhips arrive at Banjar Maſſeen the beginning of Auguſt, it is time enough to make their contracts, and to purchaſe the pepper of the laſt year's crop; which is better than that of the new crop, becauſe they have had full time to air it, and conſequently it will not loſe ſo much of the weight in the bringing over as the raw pepper does.

The Chineſe are to be looked upon as enemies in point of trade; but they muſt be treated with civility, for a trade may be carried on with them to advantage; ſeveral kinds of merchandiſe being to be had of them, which are not to be had of the natives.

The Chineſe are expert merchants, and underſtand the true value of every commodity; but the Banjareens are ignorant of the price of European goods, and Europeans muſt aſk at leaſt twice as much as they deſign to take; for tho' they aſſure the iſlanders they aſk but a ſmall profit, yet the natives having made them a compliment, and begged they would not be angry with them, will bid a fourth part perhaps, and never above half what is aſked: on the other hand, they will be ſure to aſk enough for what they ſell, and frequently ten times more than they take.

If they barter goods with Europeans, there is no relying on their ſamples, or their weights; but they muſt be examined; for the Chineſe have taught them to ſharp, and they are grown almoſt as expert as their maſters; nor nor do they reckon it any diſgrace if they are detected in attempting to overreach others.

The dragons blood produced in this country is the fineſt in the world. The country people expoſe it to ſale in ſmall drops about an inch long, every piece being wrapped up in leaves; but Europeans muſt inſiſt on having it without leaves, or they will be impoſed upon. The beſt is ſold at about 40 dollars the pecul, or about 7 s. 4 d. for 1 2 lb.

Jambee canes are ſold here for 4 dollars, or 14 s. 4 d. ſterling a hundred; and tho' they look very fair to the eye, they will often ſhrivel up in two or three days, and prove good for little. This happens when they are not cut in the right ſeaſon, or before their full growth, or when they are not rightly cured by the fire, and beeswax, whereby they harden the outward rind that it will not ſhrivel up.

If the natives offer Europeans gold in bars, they ought to be cut half thro', then broke and touched; for they will ſometimes ſo artfully cover a baſe metal with gold, that, if it be cut quite thro' with a chiſſel, it will draw the gold over with it, and the fraud remain undiſcovered. There is no artificial alloy in their head gold, which comes up in fineneſs to 22 caracts Engliſh; but the belly and foot gold are frequently mixed with iron duſt, or ſomething like it, being ſo taken up out of the ſand in their rivers; and they clear it of the iron by rubbing a loadſtone among the gold duſt, in a diſh, or large ſhell, the iron particles adhering to the load ſtone: but they are yet very deficient in the art of ſeparating metals; and therefore ſeldom or ever clear it as it ſhould be; ſo that it requires a great deal of care in the buyer, when he purchaſes any of this kind.

The higheſt coloured gold is eſteemed the beſt, while without alloy.

Their fine monkey bezoar is ſold for about five times the weight in ſilver; the beſt being of a greeniſh colour: theſe ſtones are from a penny-weight to an ounce, and ſometimes more; but the largeſt are thought to be goat-bezoar. The natives make a compound, which ſo nearly reſembles the right bezoar ſtone, that it is difficult to diſtinguiſh them; but the way to diſcover the fraud is by rubbing white lead, lime, or chalk, on a white paper, and afterwards rub the bezoar upon it; when, if it be right, it will change the white lead, chalk, &c. to a greeniſh colour. Here is alſo found a kind of bezoar, which being infuſed gives a pleaſant bitter to wine, and after the infuſion does not ſeem to be at all diminiſhed in ſubſtance. The beſt unrefined camphire is alſo ſaid to be produced in this country.

Their pepper is uſually at the rate of four or five dollars, or 18 s. ſterling the pecul, which is 132 lb.

The Chineſe are the only people who keep ſhops, and retail goods among them; their ſhops being furniſhed chiefly with ſilks, chints, callicoes, beteles, drugs, tea, China and Japan wares.

The inland part of the country is dry and mountainous; but upon the ſouth coaſts, for 100 miles one way, and 200 another, the country is all a ſtinking moraſs, being all overflowed in the rainy ſeaſon.

Rice is produced plentifully in the country, as alſo cocoa-nuts, lemons, oranges, citrons, plantanes, melons, bananas, pine-apples, and all other Indian fruits: they have alſo the cotton ſhrub, canes, rattans, and abundance of very fine timber. But what foreigners principally reſort this iſland for is their pepper, black and white: the black of three ſorts, and the firſt called Molucca or lout-pepper, which is the beſt; the ſecond Caytongee pepper, which is a middling ſort; and the third and worſt ſort Negaree pepper, of which they have much the greateſt quantity. This laſt is a ſmall hollow light pepper, and uſually very full of duſt; therefore it muſt be bought by weight, and not by meaſure, or the buyer will certainly be impoſed upon; and they will reſerve their Molucca, or heavy pepper, for thoſe who take it by weight: care muſt alſo be taken that they do not mix little black ſtones with the pepper, which are not eaſily diſcerned, neither will the garbling mill throw them out. The white pepper is double the price of the black.

In this country are alſo mines of iron and tin, with very good load-ſtone; and their mountains would afford great plenty of gold, if well wrought. The gold met with is of three ſorts; head, belly, and foot gold. The head, or Molucca gold, is in grains of the bigneſs of bay ſalt, and of a very irregular figure; it is purchaſed for eleven times the weight in ſilver, and frequently for leſs: the belly gold is a ſmaller ſort, like ſand, or filings, and ſold for ten times the weight of ſilver: the foot gold is much like this in appearance, but worſe, and ſold for nine times the weight in ſilver; however, the belly gold at theſe prices is moſt profitable.

This country is divided into ſeveral petty kingdoms; and when any prince grows more powerful than the reſt, he uſually brings his neighbours into a ſtate of dependance, and ſometimes obtains the name of king, or ſultan, of the whole iſland.

The only money of this country are dollars, half dollars, and quarter-dollars; except their caſh, which are rings of baſe metal ſtrung, that ſerve for ſmall matters.

The Banjareens will hardly take any dollars under 17 dwt. 9 gr. and it will be prudence to reſerve the heavieſt till laſt, for they will ſometimes refuſe ſuch.

Their weights are the catte, and the pecul; the catte being about 22 oz. and 100 making 1 pecul, or 132 lb. avoirdupois weight. Their leſſer weights are the tical, the mas, the tela, and the mataboorong, of which laſt 3 make 1 tela, 6 telas 1 mas, 16 mas 1 tical, and 1 tical 1 oz. 8 dwt. troy weight.

Their uſual meaſure is the ganton, which contains about a Wincheſter gallon.

2. The iſland of *Sumatra*, is ſituated between 93 and 104 deg. of E. lon. and between 5 deg. 30 min. of N. lat. and 5 deg. 30 min. of S. lat. extending from the N. W. to the S. E. 900 miles long, and from 100 to 150 broad; ſeparated from the continent of the further India by the ſtreights of Malacca on the N. E. and from the iſland of Java by the ſtreights of Sunda on the S. E.

The air of this iſland is generally very unwholſome, as it lies under the equinoctial; and, from the hotteſt ſultry weather, changing often ſuddenly to chilling cold.

There are ſome good roads for ſhipping in this iſland; but ſcarce

ſcarce any harbours. The chief towns, and which had every one of them formerly the honour of being ſtiled a kingdom, are Achen, Pedir, Pacem, Dely, Bancalis, Andragrary, Jamby, Palambam, Sillebar, Bencoolen, Manacabo, Padang, Indrapour, Poſſaman, Priaman, Ticou, Barras, and Daya: but Achen is the metropolis of the whole iſland, conſiſting of about 7 or 8000 houſes. Bencoolen, which ſtands on the S. W. part of the iſland, in 101 deg. of E. lon. and 4 deg. of S. lat. is eſteemed the moſt unhealthful of all the Engliſh ſettlements in India; but this was their principal ſettlement in Sumatra from the year 1685, to 1719, when there happened a general inſurrection of the natives, who cut off part of the garriſon, the reſt eſcaping in their boats to ſea.

Bencoolen is known at ſea by a high ſlender mountain that riſes 20 miles beyond it in the country, called the ſugar-loaf. Before the town there lies an iſland, within which the ſhipping uſually ride; and the point of Sillebar, another Engliſh ſettlement extending two or three leagues to the ſouthward of it, makes a large bay: beſides theſe marks, the old Engliſh fort, which fronted towards the ſea, might have been diſcerned when a ſhip came within ſeven or eight miles of the place.

Notwithſtanding the natives had thus driven the Engliſh from Bencoolen, they ſuffered them in about a years time to return again, and go on with the fortifications at Marlborough fort without oppoſition. It is true, there had been ſome Engliſh chiefs ſent thither who were not endued with ſo much diſcretion as they ought. Theſe gentlemen, by an imperious and aſſuming behaviour, had highly provoked the natives; but this being very tolerable, in compariſon of the tyranny of the Dutch exerciſed in every place where they prevailed, the Malays, upon the expulſion of the Engliſh, began to be under terrible apprehenſions, leſt the Dutch ſhould come and ſettle among them by force, and put an iron yoke upon their necks, as they had upon their neighbours; they ſoon therefore laid aſide their reſentment, and, overlooking their indiſcretions, gave all encouragement to them for ſettling among them: and it was very happy for the Engliſh they had removed from Bencoolen; for, beſides the unhealthy ſituation of the place, Marlborough fort was much more defenſible by its ſituation, in caſe of any miſunderſtanding happening again.

Beſides, the Engliſh ſettlements at Marlborough fort and Bencoolen, there are ſeveral others to the northward, as particularly Catoun, Ippoo, Bantall, and Mocho-mocho: Catoun lies about 40 miles to the northward of Bencoolen, Ippoo 35 farther north, and Bantall ſtands at leaſt 100 miles to the northward of Bencoolen; Mocho-mocho lies fartheſt north, not far from Indrapour, in the lat. of 2 deg. 20 min. ſouth: ſo that all the Engliſh ſettlements on the weſt coaſt lie between the 2d and 4th deg. of S. lat. or thereabouts.

To the northward of the Engliſh ſettlements on the weſt coaſt of Sumatra, ſtand the towns of Indrapour, Padang, Priaman, Ticou, Paſſaman, Batahan, Barras, and Daya. Indrapour is the firſt Dutch ſettlement to the northward of the Engliſh, and lies 2 degrees ſouth. Padang lies in 1 deg. 30 min. Priaman in 50 min. Ticou in 30 min. of S. lat and Paſſaman almoſt under the line. So that the Dutch ſettlements on the weſt coaſt extend from 2 deg. S. lat to the equator, and of theſe Padang is the principal; Batahan is 1 deg. to the northward of the line, Barras in 2 deg. 30 min. to the north, and Daya 4 deg. 50 min. north. Here, and in the reſt of the country to the northward of the equator, the king of Achen ſtill retains his ſovereignty; and it may be ſaid that no European nation is in poſſeſſion of his ports; but the ſouth parts of the iſland are ſo awed, and reſtrained of their liberty by the Dutch, that they dare not trade with any other people.

Achem is ſituated on the N. W. end of Sumatra, in 5 deg. 30 min. of N. lat. about half a league from the ſea, near a pleaſant river. When an Engliſh ſhip arrives at Achen, application is firſt made to the ſabandar, or governor of the place, for liberty of trade; and thoſe who go firſt on ſhore are examined by the guards at the great quala, or river's mouth, what country they are of, and their buſineſs; of which notice is immediately given to the proper officers, who ſettle the terms of commerce with all foreigners. The Engliſh are only required to take a ſolemn oath to obſerve the articles made between the court of Achen and Mr Henry Gray, who was once chief of the Engliſh factory in this city; the principal whereof were, that the Engliſh ſhould be allowed a free trade, and not be reſtrained of their liberties, or pay any other cuſtoms than the ordinary duty of the chop; that they ſhould have ground aſſigned them for a houſe, and warehouſe, which they might diſpoſe of at their departure; that the Engliſh ſhould not be ſubject to the laws of the country, but be governed by their own chief, and enjoy the exerciſe of their religion; and that they ſhould make the uſual preſents, and bring a letter from the chief of the place from whence they came to the ſabandar, certifying that they belong to the Engliſh company; they alſo ſwear to be faithful to the government while they remain at Achen: which oaths are taken before the ſabandar by ſome of the principal officers of the ſhip, liſting a ſhort dagger in a gold caſe three times to their heads, which is termed receiving the chop for trade, and muſt be performed with an air of gravity and ſerioufneſs, or it will give the government ill impreſſions of thoſe who come to trade thither.

The Engliſh had formerly a factory at Achen; but, finding it not to countervail the charge, it has been ſometime recalled: their ſupercargoes however, till very lately, were allowed greater privileges than any other nation; for all other foreigners pay 5, and ſometimes 8 *per cent.* cuſtom; but the Engliſh made only the ordinary preſents to the king and court, amounting to 16 or 17 ſaels in the whole.

In trafficking with theſe people, it is neceſſary to ſpecify what catty you intend to buy and ſell by; for theſe weights are very uncertain; and alſo at what rate you intend to receive, or pay the uncoined gold, which is much oftener uſed than coin.

The principal commerce of the iſland conſiſts in gold, ſilver, tin, copper, iron, diamonds and other precious ſtones, pepper, wax, honey, camphor, bezoar, caſſia, ſandal, ſulphur, rice, ſugar, ginger, and benjoin.

The gold is found particularly between Ticou and Manacabo, where the inhabitants gather it at the foot of the mountains, in trenches made on purpoſe for receiving the water of the torrents, which in the rainy ſeaſon ſweep away much of this metal; the people not knowing as yet the art of working in mines, or rather their natural indolence hindering them to engage in ſo painful a work. Thoſe who gather the gold have no trade with ſtrangers, and exchange it with their neighbours for divers merchandiſes; thoſe of Manacabo giving them arms, iron utenſils, or cotton cloths; and thoſe of Priaman, pepper, ſteel, ſalt, and Surat cloths.

Gold is alſo found at Jamby, Andragrary, and Padam. Almoſt the whole iſland, except the middle, produces pepper abundantly. In a mountain at Pedir, ſulphur is found; and near this town ooze that kind of reſin called the balſam of Sumatra: diamonds and precious ſtones are brought there from abroad, particularly from Borneo; and the other drugs and merchandiſes are found and cultivated in ſeveral parts of the iſland, eſpecially in the middle.

The great trade of the Europeans to the weſt coaſt of Sumatra is for pepper; but there are fine pepper plantations within 20 miles of the Engliſh ſettlements: for the pepper is brought down the rivers in boats to the factories; and, for the convenience of water-carriage, theſe plantations are uſually made upon a level ground near the banks of the ſame river, and muſt be in a very rich ſoil; the pepper plant requiring a ſupport like the vine.

The pepper which the Engliſh receive at Bencoolen, grows in the territories of two neighbouring Rajas; one of whom has his principal reſidence at Singledemond, which ſtands at the bottom of a large bay, 10 or 12 miles to the northward of Bencoolen; and the other at Buſar, about 10 miles up the country to the eaſtward of Bencoolen. The cuſtom the Engliſh pay for the pepper is 2 ſoocas, or half a dollar, for each bahar, conſiſting of 500 lb. great weight, or 560 pounds; and the inſtant the

pepper is weighed, and received by the company's factors, the owner receives his money for it, after the rate of 10 molocos, or Spaniſh dollars, of 3 s. 7 d. each, weighing 17 dwt. 12 gr. each for every bahar.

The iſland is governed by ſeveral petty princes, who are called ſultans, pangarans, and rajas: but the ſultan of Achen is the moſt conſiderable.

They have but two ſorts of money of their own coinage: the firſt is of lead, which they call caſh, and 1500 make a mas, or 15 s. ſterling, which is their gold coin. A quarter of a mas is called a pallam, or copong, which is imaginary; and 16 mas is one tael, or about 20 s. ſterling. Dollars and other Spaniſh money are current almoſt all over the iſland.

Their weights are the tael, 5 of which make a buncal, 20 buncals a catty, and 100 catty a pecul, or 132 lb. Engliſh avoirdupoiſe. Three pecul are a China bahar, or 396 lb.: but upon the weſt coaſt, particularly at Bencoolen, a bahar is 500 lb. great weight, or 560 lb. Engliſh.

3. The iſland of *Java*, is ſituated between 102 and 113 deg. of E. lon. and between 5 and 8 deg. of S. lat. being about 700 miles long from E. to W. and 100 broad; the iſland of Borneo lying on the north; the ſtreights of Bally on the eaſt; the Indian ocean on the ſouth; and the ſtreights of Sunda and Sumatra on the weſt.

As to the ſeaſons and monſons upon the north coaſt of Java, and the iſlands which lie on the ſame rhomb to the eaſtward as far as Solar and Tymore, the worſt weather is during the weſterly winds, which uſually begin the firſt week in November. In December it blows freſh, and the wet weather increaſes: in January the weather is at the worſt, both as to wind and rain, and continues much the ſame till the middle of February; after which the wind and rain abate till the latter end of March. In April the weather grows fair, and the winds are variable, with calms; but at the full and change of the moon there generally happen ſudden guſts of wind from the weſtward. About the firſt of May the eaſtern monſon may be ſaid to be ſettled, and in June and July often brings rain with it; but the eaſterly winds blow hardeſt when there is no rain; and this monſon for the moſt part affords clear wholſome weather, which continues till the latter end of September. In October the winds ſhift frequently, and the eaſterly winds blow faintly; but in the beginning of November the weſterly monſon ſets in again: tho' it is obſerved, that ſome years the monſons happen fifteen days ſooner or later than in others.

The currents conſtantly follow the winds here, and ſituated E. N. E. or W. S. W. as the monſon or trade wind does out at ſea.

When the weſterly winds and currents are ſtrongeſt in theſe ſeas, which is uſually in December, January, and part of February, it is in vain to endeavour to ſail againſt them, or indeed to coaſt along the ſhore; tho' there is good anchorage all along the coaſt of Java. The eaſterly winds, as well as the currents, are much more moderate; and ſhips frequently ſail againſt this monſon from Batavia to the iſland of Tymore, keeping in anchorage, and going between the iſland Madura and Java; for a ſhip may at any time come from the weſtward, thro' the ſtreights of Sunda to Batavia. On the Sumatra ſide theſe ſtreights are very deep, and in many places no anchorage; for which reaſon ſhips keep up on the Java ſide, where they may anchor in 20 or 30 fathom water, till they come near Batavia, and then they need not be concerned at its being a lee-ſhore, or dread the coming under 20 fathom.

The chief towns of this iſland are moſt of them on the north coaſt, of which Bantam lies the moſt weſterly: Batavia ſtands to the eaſtward of Bantam; and farther eaſt Charabon, Samarang, Japara, Roombong, Tuban, Sidaya, Jortan, and Surabaija. At the eaſt end of the iſland are the cities of Paſſarvan, Panuracan, and Palamboan. About the middle of the ſouth coaſt ſtands the city of Mataran, where the king, who bears that title ſtill, has his reſidence; but there are no other remarkable towns on this ſide the iſland, as it lies open to the ſouthern ocean, and does not afford that ſecurity to ſhipping as is to be found on the northern coaſt.

Bantam is ſituated in 105 deg. of E. lon. and 6 deg. of S. lat. once the capital of a large kingdom, and a port-town of great trade; where the Engliſh Eaſt India company had one of their factories; till the Dutch depoſed the king of Bantam, and expelled the Engliſh from thence, in the reign of King James II. in a time of full peace; ſince which time the Dutch have retained the poſſeſſion both of the city and kingdom, permitting one of the poſterity of the ancient kings to retain the name and ſhadow of royalty.

Batavia, by the Indians named Jacatra, and by the natives and Chineſe Calacka, or Calappa, as they call the fruit of the coco-trees, which are very common here, lies in 106 deg. of E. lon. and 6 deg. of S. lat. about 40 miles to the eaſtward of Bantam: it is ſituated at the bottom of a fine bay, in which there are 16 or 17 ſmall iſlands, that break the violence of the wind and waves, inſomuch that a thouſand ſail may ride here very ſecurely. Two large piers run out half a mile into the ſea, between which a hundred ſlaves are conſtantly employed, in taking up the mud and ſoil, which is waſhed out of the town, or the mouth of the river would be ſoon choaked up. The city is almoſt ſquare, regularly built, and about the bigneſs of Briſtol; being ſurrounded with a good wall, and defended by a ſtrong fort. The Dutch have brought many Chineſe, Malayans, Amboyneſe Topaſſes, Macaſſar Bugaſſes, Tymoreans, and other people, to Batavia; out of which ſeveral nations they have formed a regular body of troops of 12000 men, beſides their European forces to keep their ſubjects in awe.

The ſhipping of Java, before the Dutch built Batavia, was very inconſiderable: they had praws, or boats, indeed, that would ſail with incredible ſwiftneſs, but hardly any above 50 tuns. The Dutch, finding good oak growing upon the iſland, now build ſtout ſhips, and have ſeldom leſs than 20 or 30 men of war, with which they inſult all the princes in that part of the world.

No Europeans are ſuffered to trade to Batavia; but 15 or 20 ſail of Chineſe junks arrive there every year from 300 to 500 tons a piece, uſually in November or December, and return the beginning of June, whereby the Dutch are furniſhed with all the merchandiſe of China at an eaſier rate than they could by ſending their fleets thither.

Batavia is the greateſt magazine or ſtorehouſe of the Dutch Eaſt India company; where they import the merchandiſes of Japan, of the ſpice iſlands, Perſia, Surat, Bengal, and of the coaſts of Malabar and Coromandel, as well as every thing that Europe affords. One ſort of goods, which is ſpice, they barter for another all over the Indies; and having furniſhed themſelves with what is moſt valuable in the Eaſt, tranſport it into Europe, where all is converted into ready money: ſo far is their India trade from diminiſhing their treaſure, that it furniſhes them with more than all the trade of the world beſides.

All ſorts of mechanic arts flouriſh alſo at Batavia; but if the Dutch herein fall ſhort of the European workmen, it is where the work requires fine ſprings and movements; as in clocks and watches, which are hardly ever brought to a proper temper in hot countries.

The Dutch have ſlaves at Batavia from almoſt every country in Aſia; ſome are taken in war, others purchaſed of their parents, and many are born ſo; and ſlaves being as merchantable a commodity as any other in this part of the world, there are a kind of privateers in theſe ſeas, who will land upon a neighbouring ſhore, and carry off whole families of men, women, and children; nor does the purchaſer, whether European or Indian, ever demand how the ſeller came by them.

The next conſiderable town to Batavia, on the north coaſt of Java, is Charabon, which lies about 170 miles to the eaſtward of Batavia. A little farther eaſtward lyes Samarang and Japara; the latter of which was the metropolis of a large kingdom before the Dutch made themſelves maſters of it.

At the ſouth-eaſt end of Java is ſituated the kingdom and city

city of Palamboang, on a bay over againſt the iſland of Bally, and near the ſtreights of that name, in 8 deg. 30 min. of S. lat. There are ſeveral rivers which fall into the ſea on each ſide the town: and ſhips which happen to paſs this way, as the Engliſh Eaſt India men frequently do in their voyage home from Borneo, ſend their boats up theſe ſtreams over the bars at half tide, and bring off water and proviſions; but there is ſometimes a great ſurf runs aſhore, and makes it troubleſome watering here.

What has been ſaid of the commerce of the Javans, ſhould be likewiſe underſtood of the Chineſe, who are eſtabliſhed among them in great numbers, and divide this trade with the natives of the country.

There are ſeveral little iſlands to the northward of Java, where the Engliſh meet with very good refreſhments, at a much eaſier rate than at Batavia; thoſe moſt frequently mentioned being Madura and Carimon Java.

A little to the eaſtward of Java Major lies the iſland of Bally, or Leſſer Java; and farther, Lomboy, Combava, and ſeveral others, in moſt of which the Dutch have forts and ſettlements, and hence alſo frequently recruit their troops.

Before the Dutch were maſters of Bantam, the Javaneſe, who are naturally born for commerce, carried on themſelves a very conſiderable one, both foreign and domeſtic, which is now conſiderably diminiſhed; yet, notwithſtanding the endeavours of the Dutch to ſuppreſs it entirely, it always ſubſiſts, upon account of the number of harbours and ports in the iſland, where the company is not eſtabliſhed.

The places of their greateſt foreign trade are Sumatra, Siam, Malacca, Borneo, the Celebes, Bouton, the Moluccas, Banda, Solor, and Timor. But for the Moluccas, and the other iſlands thereon depending, which the Dutch are abſolutely maſters of, it is neceſſary that they take permits and paſſports from the company, who grant them with difficulty, and at great expences.

The Javaneſe trade alſo by ſea to Batavia; and it is even their greateſt commerce, upon account of the concourſe of different nations there from all parts of Aſia.

Their principal commerce conſiſts in rice, either for importation or exportion; yet ſome of them trade in all the productions of the iſland, as pepper, coco-nuts, oil, ſugar, arrack, ſeveral medicinal drugs, benjoin, ginger, copper, and gold. They bring back in exchange ſeveral ſorts of Coromandel, Bengal, and Surat ſilk ſtuffs, cotton cloths, covering for beds, mats, ſotas a kind of habit the Javan women are very fond of, lacca, tranſparent reſin, tortoiſe-ſhell, tin, lead, porcelain, tea, ſantal, and ivory. European merchandiſe, with cinnamon, nutmeg, and cloves, make alſo a part of their trade; but they purchaſe them from the Dutch of Batavia, unleſs they can clandeſtinely have nutmeg and cloves from the Moluccas and Banda.

The retail-commerce of the Javaneſe conſiſts in all ſorts of European and Aſiatic merchandiſe, ranged in their ſhops with great order and decency.

Thoſe of Bantam have three bazars opened every day at different times, and reſorted by a multitude of buyers and ſellers.

In theſe bazars, as almoſt throughout all Aſia, each kind of merchandiſe has its ſeparate quarter; and all the ſhops are kept equally by both ſexes of all ages; the Javaneſe from their early youth being accuſtomed to this manner of dealing, and learning from their parents, as an only maxim, not to be cheated, and to cheat others if poſſible; which they perfectly retain; no traders in the Indies being more crafty and unfaithful than the Javaneſe, who in this reſpect reſemble the Chineſe.

UNDERLAND. A port-town of Durham, ſituated in 1 deg. of W. lon. and 54 deg. 55 min. of N. lat. on the German ſea, at the mouth of the river Ware, 10 miles N. of Durham city.

UN*fire Office*. See *Inſurance*.

UPERCARGO. A perſon employed by merchants to go a voyage, to overſee their cargo and lading, and diſpoſe of it to the beſt advantage; particularly on board the East India ſhips.

UPERFINE, in the manufactories, a term uſed to expreſs the ſuperlative fineneſs of a ſtuff. Thus a cloth, or camblet, is ſaid to be ſuperfine when made of the fineſt wool, or when they are the fineſt that can be made.

The term is particularly uſed among gold wire-drawers, for the gold or ſilver wire, which, after being drawn through an infinite number of holes, each leſs and leſs, is at length brought to be no bigger than a hair.

SUPERINTENDANT, in the French cuſtoms, an officer who has the prime management and direction of the finances, or revenues, of the king: thus the cardinal de Richlieu made himſelf ſuperintendant of commerce.

SUPERNUMERARY. Something over and above a fixed number. In ſeveral of the offices are ſupernumerary clerks, to be ready on extraordinary occaſions. There are alſo ſupernumerary ſurveyors of the exciſe, to be ready to ſupply vacancies when they fall; who have only half pay.

SUPERVISOR, particularly in the exciſe, ſignifies a ſurveyor, or overſeer.

SUPPLIES, is a term for the annual grants made by the Britiſh parliament for the ſervices of the ſtate, and ſupport of the crown; which ſupplies include the land and malt tax, the money taken from the ſinking fund, and all the monies extraordinarily ariſing that are not appropriated, but left to the diſpoſition of parliament.

SURAT. A city and port-town of the Hither India, in Aſia, in the province of Guzarat, or Cambaya, ſituated on the river Tapte, 10 miles E. of the Indian ſea, 160 miles N. of Bombay, and as many S. of Cambaya city; lying in 72 deg. 20 min. of E. lon. and 52 deg. 38 min. of N. lat.

SURGEON. A perſon ſkilled in ſurgery or anatomy, who practiſes the ſetting broken limbs, curing wounds, &c.

SURGEONS *Company of London*. By the ſtatute of the 18th of Geo. II. it was enacted, That the incorporation of the barbers and ſurgeons of London, made by the act of the 32d of Henry VIII. ſhould be diſſolved and declared void: and that the members of the ſurgeons company, who were freemen, and approved ſurgeons within the rules thereof, and their ſucceſſors, ſhould thenceforth be a diſtinct body corporate, and commonalty perpetual; by the name of "Maſters, governors, and company of the art and ſcience of ſurgeons of London;" and by that name may implead and be impleaded, and purchaſe and enjoy lands, rents, and thelike, not exceeding 200 l. *per ann.* without incurring the penalties of the ſtatutes of mortmain. That the company may elect one principal maſter, or governor, two other governors or wardens, ten examiners of ſurgeons, and 21 perſons to be the court of aſſiſtants, to be qualified, admitted, and to continue in their offices, as by the bye-laws of the ſaid company ſhould be ordered and appointed: ſince which time they have erected a beautiful hall in the Old Bailey, with all proper apartments and conveniencies, for the due exerciſe of that profeſſion. See *Barbers* company.

SURINAM. The capital of the Dutch colonies and ſettlements in Guiana, in South America, lying in 56 deg. of W. lon. and 6 deg. 30 min. of N. lat. See *Dutch* America.

SURLO. A weight uſed in the Levant, particularly at Aleppo, weighing about 108 lb. avoirdupoiſe.

SURPLUSAGE, is ſometimes applied to matters of accompts, and denotes a greater diſburſement than the charge of the accomptant amounts to.

SURREPTITIOUS. See *Subreptitious*.

SURVEYING. The art or act of meaſuring lands; that is, of taking the dimenſions of any tract of ground, laying down the ſame in a map or draught, and finding the content or area thereof.

SURVEYOR. One that has the overſight and care of conſiderable works, lands, or the like. See *Superviſor*. Such are the ſurveyor-general of the king's manors; ſurveyor of the king's exchange; ſurveyor-general of the works; ſurveyor-general of the crown lands; and the like.

SURVEYOR *of the melting*, is an officer of the mint, whoſe buſineſs it is to ſee the bullion caſt out; and that it is not altered after the delivery of it to the melter.

SURVEYOR *of the navy*, is an officer whoſe buſineſs is to

know the ſtate of all ſtores, and ſee the wants ſupplied; to ſurvey the hulls, maſts, and yards, of ſhips; and to audit the boatſwains and carpenters account. See *Navy*.

SURVEYOR *of the ordnance*, is an officer, whoſe charge is to ſurvey all the king's ordnance, ſtores, and proviſions of war, in the cuſtody of the ſtore-keeper of the Tower of London, to allow all bills of debts, and to keep checks on labourers and artificers works.

SURVEYOR is alſo uſed for a gauger. And alſo for a perſon who meaſures and makes maps of lands. See *Surveying*.

SUTTLE-*Weight*. The pure or net weight of any ſort of goods, without caſk or wrapper.

SWABBER. The title of an inferior officer on board a man of war, whoſe office is to take care the ſhip be kept neat and clean. In order to this, he is to ſee her waſhed well once or twice a week at leaſt; eſpecially about the gun-wales and chains. He ought alſo to burn pitch or ſome ſuch thing now and then between decks, to prevent infection; and to acquaint the captain with ſuch of the men as are naſty and offenſive.

SWABIA. A circle of Germany. See *Germany*.

SWALLEY. A port-town of India, in the province of Cambaya, ſituated in 72 deg. 15 min. of E. lon. and 21 deg. 35 min. of N. lat. on the Indian ocean, 12 miles N. W. of Surat; where ſhips receive and deliver their merchandiſe for the merchants of Surat.

SWANSEY. A port-town of Glamorganſhire, ſituated in 4 deg. of W. lon. and 51 deg. 40 min. of N. lat. on Briſtol channel, 40 miles W. of Cardiff.

SWEDEN. Part of the ancient Scandinavia, is bounded by Norwegian Lapland towards the north; by the dominions of Moſcovy on the eaſt; by the Baltic ſea on the ſouth; and by Denmark and Norway on the weſt, lying between 10 and 30 deg. of E. lon. and between 56 and 69 deg. of N. lat. ſo that it muſt be 800 miles long from N. to S. and 500 broad from E. to W. But then within theſe bounds Finland is included, which was entirely conquered by the Ruſſians, under the late Czar Peter. However, the Ruſſians, by a late treaty of peace, have reſtored five of the provinces of Finland to the Swedes again; retaining only the diſtrict of Kexholm and Carelia, to the northward of the river Nye; and of theſe Sweden has made an abſolute ceſſion to Ruſſia, as well as of the reſt of the Swediſh dominions, to the ſouthward of that river, namely, of Ingria, Eſtonia, and Livonia, the richeſt and moſt commodious of all the Swediſh territories, and which that crown would never have parted with but upon the laſt neceſſity. See *Ruſſia*.

Part of the Swediſh Pomerania in Germany, with Bremen and Verden, have been alſo relinquiſhed to other powers by the Swedes; ſo that Sweden is now almoſt reduced within its ancient bounds. See *Germany*.

From the mountains in Sweden fall innumerable rivers, or torrents, not many of them navigable, on account of the rocks and cataracts which obſtruct their paſſage; they form however conſiderable lakes, the chief whereof are the Wener, and the Weter, each of them near 100 miles in length; and the Meller, whereon Stockholm ſtands. The ſeas of Sweden are the Sound, which divides Gothland and Schonen from Denmark; the Baltick, or Eaſt ſea, which flows between Sweden and Germany, and between Sweden and Livonia; the Bothnick bay, or Bodenzee, which ſeparates Sweden from Finland; and the gulph of Finland, which divides Finland from Livonia; but of the latter, the Ruſſians have, in a manner, the dominion at preſent, being poſſeſſed of Wybourg, Peterſburg, Narva, Revel, and indeed of almoſt all the other ports upon it.

The ſix grand provinces of Sweden, are, 1. Gothland, or Gothia. 2. Sweden, or old Sweden proper. 3. Swediſh Lapland. 4. Finland. 5. The Swediſh dominions in Germany; which were lately Pomerania, Bremen, and Verden; but, as theſe were conquered by the Danes and their allies in the late war, Sweden reſigned her intereſts in Bremen and Verden, to King George I. Elector of Hanover, and her right in Stetin to the King of Pruſſia; ſo that there remains little in poſſeſſion of the Swede in Germany except Stralſund, and the territory about it, lying over againſt the iſle of Rugen. 6. The iſlands of Sweden, which are very numerous, the chief being thoſe of Gothland, Oeland, Aland, Huena, Rugen, and Uſedom: as for the iſlands of Oeſel, Dago, and the other iſlands on the coaſt of Livonia, theſe were reſigned by Sweden to Ruſſia, with Livonia itſelf, by the late peace.

Gothland, is again ſubdivided into the provinces of Eaſt Gothland, Weſt Gothland, Smaland, Wermeland, Dalia, Schonen, Bleking, and Halland. The chief towns of Gothland are Lunden, or Lund, the metropolis of Schonen, ſituated in 56 deg. of N. lat. and about 30 miles E. of Copenhagen, being now upon the decline. Malmo, a port-town about 12 miles S. of Lunden, being a good harbour, and well fortified. Landskroon, 16 miles N. W. of Lunden. Helſenburg, ſituated on the Sound, almoſt oppoſite to Elſenore. Chriſtianople, a port-town on the Baltic. Carelſcroon, where the royal navy is uſually laid up, ſituated on a little iſland upon the coaſt of Bleking, and joined to the continent by a long bridge. Calmar, a port-town, and place of pretty good trade, 20 miles N. of Carelſcroon. Weſterwick, a port-town, 50 miles N. of Calmar. Jenkoping, ſituated at the weſt-end of the lake of Weter. Halmſtadt, a port-town about 60 miles N. of Lunden. Gottenburg, the capital of Weſt Gothland, ſituated in 11 deg. 30 min. of E. lon. and 58 deg. of N. lat. on the coaſt of the Schaggerac, near the entrance of the Baltic, 200 miles S. W. of Stockholm, and 150 N. of Copenhagen: it is a well fortified town, with a good harbour; and, being to the northward of the Sound, is of great conſequence to Sweden, becauſe a trade may be carried on from thence, without being obliged to pay any duties to Denmark. Beſides theſe, there are the towns of Scara, 80 miles N. of Gottenburg; Lidkoping, on the S. ſide of the lake Wener; Marienſtat, on the ſame lake; Daleburg, on the Wener, 45 miles N. of Gottenburg; Carolſtat, on the Wener; Linkoping, 90 miles N. of Calmar; Suderkoping, 20 miles E. of Linkoping; and Norkoping, ſituated on the banks of a lake, between Linkoping and Suderkoping.

SWEDEN *Proper*, or *Old Sweden*, is divided into the provinces of Uplandia, Sudermonia, Weſtmania, Nericia, Geſtricia, Helſingia, Dalecarlia, Medelpedia, Angermania, Jemptia, and Weſt Bothnia. The chief town is Stockholm, the metropolis of the kingdom, ſituated on ſeveral ſmall iſlands in the lake of Meller, near the Baltic, in 18 deg. of E. lon. and 59 deg. 30 min. of N. lat. being 300 miles N. E. of Copenhagen, 900 N. E. of London, and 400 W. of Peterſburgh. The acceſs to it by ſea is extremely difficult, on account of the great number of ſmall iſlands which lie before the entrance of the harbour, and ſecure it from any inſults by ſea. It is neither walled nor fortified by art; nor is there much occaſion for either. The harbour is as ſpacious and ſecure as moſt in Europe, and ſhips of the greateſt burthen may ride cloſe to the keys: but then it is difficult to get in or out of the harbour, which is in a manner blocked up by the ice four or five months of the year: the different winds alſo, which are requiſite to carry a fleet out, demand a great deal of time; and there is no tide to help them; ſo that an enemy may deſtroy the whole coaſts before the Swedes can put to ſea: to prevent which, moſt part of the royal navy is laid up in the harbour of Carelſcroon. The city extends over the whole iſland of Stockholm; being only an Engliſh mile and half in circumference; but the ſuburbs, on the adjacent iſlands, are much larger; and the whole is computed to contain about 30,000 inhabitants: for beſides the iſland of Stockholm, there are five other ſmall iſlands built upon, and joined to it by bridges; being Ridderſholm, Koningſholm, Hogalandſholm, Schipſholm, and Ladduggrſtand. Stockholm has not been built much above 300 years; being till then a barren iſland, inhabited only by two or three fiſhermen, when a caſtle was built upon it, to prevent the incurſions of the Ruſſians: ſoon after the court removed thither from Upſal, and Stockholm became the metropolis of the kingdom, as alſo the greateſt town of trade in Sweden, as it is at preſent.

The other moſt remarkable places in proper Sweden are Upſal, ſituated in 17 deg. 30 min. of E. lon. and 60 deg. of N. lat. 40 miles N. of Stockholm, in the middle of a large plain, on the river Sala; being the only archbiſhopric in

in any Lutheran country. Enkoping ſtands on the north ſide of the lake of Meller, 40 miles W. of Stockholm. Nykoping, a pretty good harbour on the Baltic, 50 miles S. of Stockholm. Stregnes, 30 miles N. of Nykoping. Orebro, ſituated between the lake of Wener and Meller. Oroſia, or Weſteras, ſituated on the northſide of the Meller, 30 miles S. W. of Upſal. Gevelia, on the Bothnic gulph, 50 miles N. of Upſal. Hundſwickwald, on the ſame gulph, 80 miles N. of Gevalia. Indal, 40 miles N. of Hundſwickwald. Hernoſand, on the gulph of Bothnia, 90 miles N. of Hundſwickwald. Uma, 80 miles N. of Hernoſand. Torne, ſituated at the bottom of the Bothnic bay, on the confines of Lapland. Lida, 80 miles W. of Hernoſand. Hedmora, 60 miles N. W. of Upſal. Falun, and Reſundt.

SWEDISH *Lapland*, lies to the N. of Proper Sweden, and is ſubdivided into 5 parts, Torne Lapmark, Kimi Lapmark, Lula Lapmark, Pitha Lapmark, and Uma Lapmark; being ſo denominated from certain rivers which riſe in, or run through, each province, into Bothnia, and afterwards diſcharge themſelves into the Bothnic bay; there being a town at the mouth of each river, of the ſame name with the province from whence it flows. This province extends ſo far to the N. that very few have travelled over it. The town of Torne ſtands upon a little iſland, at the mouth of the river, in 22 deg. 45 min. of E. lon. and 65 deg. 40 min. of N. lat. 400 miles N. of Stockholm.

Finland lies ſouth of Swediſh Lapland, and is deſcribed under Ruſſia. See *Ruſſia*.

The SWEDISH *dominions in Germany* conſiſt now only of ſome part of the Upper or Swediſh Pomerania, bounded by the Baltic towards the north; by the Lower, or Brandenburgh Pomerania towards the eaſt; by the marquiſate of Brandenburgh towards the ſouth; and by Mecklenburgh on the weſt. The principal Swediſh town, ſince the Swedes were deprived of Stetin, Bremen and Verden, is Stralſund, ſituated on the ſhore of the Baltic, oppoſite the iſle of Rugen, in 13 deg. 22 min. of E. lon. and 54 deg. 23 min. of N. lat. 65 miles E. of Wiſmar, 80 N.W. of Stetin, and 40 N. E. of Roſtock. See *Germany*. The laſt grand diviſion of the Swediſh dominions conſiſts of the iſlands belonging to that kingdom, which are all of them ſituated in the Baltic. Aland is ſituated at the mouth of the Bothnic bay; having no town upon it, except Tiketo; and the villages were all reduced to aſhes by the Ruſſians in the late war. The iſland of Gothland is ſituated about 60 leagues to the weſtward of Livonia, being about 30 leagues in length, and 12 in breadth; the chief town whereof is Wiſby, or Viſburg: the harbour is large; but the piers being deſtroyed, it is almoſt choaked up with ſand: there are ſeveral good ports both on the eaſt and weſt ſide of the iſland, and the country is agreeably diverſified with meadow and arable land: they alſo dig free ſtones here, and a kind of grey marble, not unlike granate. The iſland of Oeland is a little to the eaſtward of the continent of Gothland; about 25 leagues long, and 4 broad, the chief town whereof is Bornholm. Oxen, horſes, and fallow deer, abound in this iſland, which conſiſts chiefly of paſture ground. Huena is a ſmall iſland in the Sound, the chief town whereof is Urainberg. The iſland of Rugen, ſituated over againſt Stralſund, in the Upper Pomerania, is 30 miles long, and as many broad; but ſo indented with creeks and bays of the ſea, that there is no part of it a league diſtant from the coaſt. There is no walled town in this iſland, but it abounds in grain and cattle. The iſlands of Uſedom and Wollin lie to the ſouthward of Rugen, on the coaſt of Pomerania, in which there is no great town, nor any thing elſe remarkable. The paſſage between theſe two iſlands is narrow, and known by the name of the Swin Sound. The iſlands of Dagoe and Oeſel, belong to Ruſſia: and there are alſo reputed to be ſix thouſand leſſer iſlands on the coaſt of Sweden.

The Swedes are of a good ſtature, and robuſt conſtitutions; qualified by nature and education for enduring hardſhips and fatigue, rather than for undertaking any thing of art or curioſity. The nobility apply themſelves chiefly to a military life; the gentry will not condeſcend to accept employments in the church, to practiſe law or phyſic, or exerciſe any trade; and ſuch who follow mercantile affairs will rather do the drudgery, than dive into the myſtery of commerce or manufactures; ſo that, in whatever requires ingenuity and dexterity, they are obliged to be ſerved by ſtrangers.

The whole year in Sweden is divided into two ſeaſons; winter and ſummer: for the ſpring and autumn are of ſo ſhort duration, that they ſcarce deſerve any conſideration. They have ſtrawberries, raſberries, and ſuch kind of fruit growing upon every rock, during the three ſummer months; and they have alſo apples, pears, plumbs and cherries; with plenty of all kinds of roots. Their woods conſiſt chiefly of fir, pines, beech, birch, alder, juniper, and ſome oak, particularly in the province of Bleking; and the trees grow in moſt places ſo thick, that they are not paſſable. Their cattle are of a ſmall ſize: but the horſes of Finland are valued beyond thoſe of Germany. Their ſheeps wool is coarſe, and only fit to make cloathing for the common people. Their wild beaſts are bears, wolves, elks, deer, foxes, hares, and ſquirrels; of which the three laſt change their colour to white in the winter, as they do in Ruſſia. They have plenty of fowl, both wild and tame. Their lakes and rivers are well ſtored with variety of good fiſh; particularly ſalmon, pearch, trouts, tench, pikes, and many others; of which the ſtreamling, a fiſh ſomething leſs than a pilchard, is very common, being ſalted, barrelled up, and ſent to all parts of the country: they alſo ſalt up their ſalmon, and large pikes; which ſerve them for food in the winter when their waters are frozen up, and no freſh fiſh to be had: beſides, they have ſeal, and ſome other fiſh in the Bothnic gulph, of which they make great quantities of train oil.

The principal part of the Swediſh manufactures conſiſts in what is made of copper and iron; of which they have valuable mines. There is alſo a mine of ſilver, whoſe ore yields about 4 *per cent.* and requires great pains to refine it; though it produces about 20,000 crowns of fine ſilver yearly, of which the king has the pre-emption, paying one fourth leſs than the real value. The great copper mine of Dalecarlia is 80 fathom deep, and of a great extent, yielding annually the value of 200,000 l. ſterling, of which the king has a 4th part in kind, and of the remainder a duty of 25 *per cent.* when exported unwrought. There are a great number of iron mines and forges; particularly in the mountainous part of the country, where they have the convenience of water-falls to turn their mills; from which, beſides what ſerves for their own uſe, they export annually to the value of 300,000 l. ſterling in iron to foreign countries. There is a fair held every year at Oretro, where the citizens of Stockholm and Gottenburg chiefly reſort; having the privilege of buying up the iron of the bruck-patrons, or maſters of the iron works; and ſelling it to foreigners, who have not the privilege of buying it at the firſt hand.

The Swedes formerly, either through pride or indolence, ſuffered their copper and iron ore to be carried into foreign countries, and wrought abroad: ſo that the Hanſe towns monopolized this branch of trade till about the time of the reformation; for the ore was carried to Dantzic, and Pruſſia, where it was forged into bars; which is the reaſon that the Engliſh ſmiths ſtill call foreign iron Dantzic or ſpruce iron. The Swediſh nation owes its greateſt improvements in this manufacture to thoſe ingenious mechanics who were driven out of the Low Countries, by the Duke of Alva, at the beginning of the reformation: for theſe people, not being allowed the liberty of their religion at home, tranſported themſelves to Sweden, where they erected forges, and other conveniencies, for the making of iron guns, wire, and all manner of manufactures of copper, braſs, and iron; which are ſtill chiefly carried on by the deſcendants of thoſe people.

The exports from Sweden, beſides their hard ware, are pitch, tar, maſts, deals, and wooden ware: they have alſo endeavoured to ſet up the ſilk and woollen manufactures; in the latter of which they have in ſome meaſure ſucceeded. However, the Swedes import from abroad

woollen

woollen cloth, ſilk, ſtuffs, wine, brandy, ſugar, ſpices, tobacco, paper, linen, and other merchandiſe, which uſually balance their exportations, and ſometimes exceed them.

Almoſt all the commerce of Sweden is carried on at Stockholm; ſtrangers having not the liberty of trading in the Bothnic gulph; nor the ſubjects of the crown the liberty of carrying their merchandiſe elſewhere than to the capital.

The Swedes themſelves import moſt of their merchandiſe to Holland, Spain, Portugal, and France; bringing great cargoes of wine, brandy, and ſalt from France, eſpecially in the time of a war.

The Engliſh and Dutch are thoſe who trade moſt to Sweden; the former upon account of their woollen cloths, and the latter on account of their ſpice. The trade of the Dutch is notwithſtanding the more conſiderble; particularly ſince in ſome reſpects they have made themſelves maſters of the copper mines of the kingdom, and the pitch and tar made there; which therefore are almoſt as cheap at Amſterdam as at Stockholm.

Strangers are allowed to unload at Stockholm the merchandiſes they bring there, without paying the duties, but as they ſell them; and it is in their power, if they cannot diſpoſe of their goods, to bring them back aboard their ſhips to ſell them elſewhere, paying only a duty of one half *per cent.*

The duties of entry upon merchandiſe are ſo exceſſive at Stockholm, that the generality of ſtrangers are diſguſted at bringing any there; and it is certain, if the Swedes underſtand well their intereſt, they would find more advantage in the moderation of theſe duties, than they do by keeping them ſo high; becauſe they would eaſily gain by the quantity of merchandiſe, and ſhipping entering their ports, what they would ſeem to loſe by lowering them, ſhould even the product of their cuſtomhouſe not increaſe by a conduct ſo proper for keeping on footing a conſiderable commerce in a ſtate.

An idea of theſe exceſſive duties may be had by thoſe raiſed upon French wines, brandy, and ſalt.

Wines pay 60 rixdollars, or 14 l. ſterling *per* ton duty of entry.

Brandy, 12 rixdollars, or 2 l. 13 s. 6 d. ſterling *per* barique.

Salt, 18 rixdollars, or 4 l. 4 s. 6 d. ſterling *per* laſt.

The revolutions which happened in Livonia, Pomerania, and the dutchy of Bremen, by the war in the north, gave birth to ſeveral pieces of writing, whereby it was inſinuated that Peter the Great Czar of Muſcovy, formed the deſign of ruining the commerce of other nations in the Baltic, and engroſſing it all to himſelf.

The letter, ſuppoſed to be written by the merchants of Hamburg, and Dantzick, to thoſe of London, and Amſterdam, gives a plan thereof pretty well imagined, and places the center of this new Ruſſian commerce in the city of Peterſburg, where it would be eaſy to tranſport on one ſide all the merchandiſe of the Eaſt, the empires of Turky and Perſia, by the junction of the Tanais and Volga; and by conducting alſo a canal from the latter as far as the great lake of Ladoga, which falls into the Baltic; as alſo on the north ſide all thoſe of Archangel, by the river Onega, which, made to run into the ſmall lake of Kargapol, may be eaſily joined with a river which falls into the great lake of Onega that empties itſelf into the Ladoga by the river Sueri.

Theſe junctions made, and paſſages eſtabliſhed, the Baltic is ſuppoſed to be overſpread with Ruſſian ſhips built at Petersburg, and in the ports of Livonia, which are to exclude all other European nations from the entrance of the Sound, and to bring all the merchandiſes of the Eaſt and North to Holland, and England, where the Engliſh and Dutch, who have diſtributed them for ſo long a time among other nations, with ſuch immenſe profits, will be obliged to receive them from the hands of the Muſcovites, at whatever price they ſhall think proper.

However, it does not appear that the Ruſſians have any ſuch intention.

The trade of the Swedes to England is held to be moſt beneficial to them; as it takes off their own manufactures, and brings them in return near two thirds in money. See *Balance* of Trade.

Their moſt diſadvantageous trade is that to France, which furniſhes them only with ſilks, and other trifles, to ſupply their vanity; taking off but little of their native commodities.

The college, or board of trade, at Stockholm, which conſiſts of a treaſurer and four counſellors, has the direction of their commerce, and determines all matters in relation to trade. The bank of Stockholm is of great advantage to their trade; as the merchants uſually make their payments to each other by bills drawn upon it; which ſaves them the trouble of tranſporting money from place to place; and this is no ſmall convenience in Sweden, where payments are frequently made in copper money, that require a wheel-barrow, or a cart, to bring home any conſiderable ſum.

The Swedes, as well as ſome other nations, have followed the example of the Engliſh, by eſtabliſhing an act of navigation, whereby foreigners are prohibited to import any goods but what are of the product of their country; which affects the Dutch more than the Engliſh, as they are the common carriers of Europe, tranſporting the effects of one country to another, and having little or nothing of their own growth. But if the Britiſh nation could improve its plantations in America, ſo as to be ſupplied with naval ſtores from thence, it is no matter how little they dealt with any of the northern powers, who at preſent receive chiefly ready money from Great Britain; becauſe, they either work ſome woollen cloths themſelves, or purchaſe the reſt at other markets, where the cloth is not ſo good, but can be had at a cheaper rate.

The royal navy of Sweden is now inferior both to that of Denmark, and to that of Ruſſia: however, ſeveral large ſhips are built in Sweden, and ſold to the French.

The public revenues of this kingdom annually amount to about a million ſterling; of which the cuſtoms produce about a fourth part, and the demeſne lands a third.

SWEEP, in the ſea-language. The ſeamen call the mould of the ſhip, when ſhe begins to compaſs in at the rung-heads, the ſweep of her, or the ſweep of the futtock.

SWEEPING *at ſea*, ſignifies dragging along the ground, at the bottom of the ſea or channel, with a three fluked grapnel, to find ſome hawſer or cable which is ſlipped from an anchor.

SWEETS, in the Engliſh cuſtoms, is a denomination for all kinds of made wines.

SWITZERLAND, including the country of the Griſons, and its other allies, is bounded by that part of Alſace called the Suntgaw, the Black foreſt, and part of the circle of Suabia towards the north; by the country of Tyrol on the eaſt; by the duchies of Savoy and Milan, and the provinces of Bergamo and Breſcia in Italy towards the ſouth; and by the country of Burgundy, or Franche-Comte in France, towards the weſt; extending in length from eaſt to weſt about 260 miles, and in breadth from north to ſouth upwards of 100 miles; there being ſome parts of Italy and Gaul annexed to it, which were not included in the antient Helvetia.

The country lies between 45 and 48 deg. of N. lat. and may be divided into three parts; Switzerland Proper, or the 13 cantons; the ſubjects of Switzerland, or the conquered countries; and the allies of Switzerland. The 13 cantons, according to their precedency, are Zurich, Bern, Lucern, Uri, Switz, Underwald, Zug, Glaris, Bazil or Baſle, Friburg, Soluthurn, Schaffauſen, and Appenzel; of which the proteſtant cantons are Zurich, Bern, Bazil, and Schaffauſen, with above two thirds of the canton of Glaris, and more than half of Appenzel; the reſt being all Roman catholics.

The ſources of many great rivers are found in or near this country, from whence it is generally concluded to be the higheſt land in Europe; particularly the Rhine, the Rhone, the Danube, the Adda, the Ticino, the Lintz, the Aar, the Ruſs, the Inn, and innumerable other leſſer ſtreams; there being not a valley but is watered by a rivulet. There are alſo a great number of noble lakes, where ſome might deſerve the name of ſeas; particularly thoſe of Conſtance and Geneva, being near 60 miles in length

and 12 in breadth; as alſo thoſe of Neufchattel, Zurich, and Lucerne, almoſt of equal magnitude; and beſides the lakes in the vallies, there is one on the top almoſt of every mountain. There are alſo all over the country, as well on the hills as in the valleys, abundance of fine woods, and whole foreſts of pine and fir trees, which if they lay nearer the ſea, would be ineſtimable. There are alſo ſome groves of oaks and elms, but deal is moſt generally uſed both for building and firing; there being no great plenty of the other.

If the Switzers were not the beſt huſbandmen in Europe, many of their valleys would ſcarce bear any thing; and, as it is, the cold tempeſtuous ſeaſons about harveſt frequently deſtroy all the fruits of their labour. In the cantons of Lucerne, Ury, Switz, Underwald, Zug, Glaris, and Appenzel, they have not corn enough for the ſubſiſtence of the natives, and in ſome of them none at all: and tho' the ſurplus which the other cantons produce might ſupply them if it came to maturity, yet the mountains which ſurround them are ſuch magazines of hail, rain, and tempeſts, that the fruits of the earth are frequently blaſted by ſtorms, or killed by cold rains, and ſometimes they loſe their harveſt entirely; for which reaſon in plentiful years they lay up their corn in magazines, to prevent a famine among the common people in times of dearth.

Switzerland alſo produces wine of ſeveral ſorts, of which two are preferred above the reſt; the firſt white, produced in the Pais de Vaud, upon the banks of the lake of Geneva; the ſecond red, growing in the county of Neufchattel: but the ſame misfortune frequently happens to their vines as to their corn fields, the vintage being often ſpoiled by unſeaſonable weather. The Switzers abound in good cattle of all kinds; and have not only ſufficient for their own uſe, but drive a great trade with them in the neighbouring countries, eſpecially with their horſes. Veniſon they have in abundance, and all manner of fowls, wild and tame; they have alſo wild hogs, and goats of various kinds, particularly bouquetins, and chamois, which they reckon among their veniſon, and it is of the ſkin of the chamois that the ſhammy leather is made. Their lakes alſo abound in excellent fiſh, particularly trouts of an extraordinary ſize.

It is ſaid that there are ſome veins of ſilver, lead, iron, and copper, in their monntains; but either none of them are wrought, or they receive little benefit from them. They have alſo plenty of black marble with white veins and ſpots in it; and great quantities of cryſtal on the tops of the mountains and ſides of the rocks; being of two kinds, the one clear and tranſparent, the other pale and cloudy; and in the Valais they meet with a kind of bituminous coal.

France, Germany, Italy, and Holland, are the principal countries with which Switzerland entertains the moſt conſiderable commerce.

France ſupplies it with the corn of Alſace, the ſalt of Franche-Comté, the wines of Burgundy, gold and ſilver works, Lyons ſilks, and ſeveral woollen ſtuffs manufactured in the provinces that border upon the cantons of Switzerland.

It has from Germany all kinds of haberdaſhery ware, and particularly from Nuremberg great ſtores of hard-ware, as alſo leather from Frankfort.

Italy, eſpecially Piedmont and Savoy, ſend to it ordinary ſilks, orgenzins, and ferrets either ſpun or otherwiſe.

Laſtly, from Holland are brought to it cloths, ſerges, flannels, camblets, callicoes, muſlins, cambricks, cottons, ivory, medicinal drugs, dying ſtuffs, ſpice, tea, chocolate, train-oil, Ruſſia leather, and ſilk India ſtuffs.

The merchandiſes of the growth of Switzerland, or which are wrought in its manufactures, are Zurich crapes all of wool, others half wool and half ſilk, others of all numeros; linens of St. Gall, whereof great parcels are ſent into Germany, France, Spain, and Italy; ſeveral ſmall woollen ſtuffs, cheeſes, wool, white cattle, and horſes, which are greatly eſteemed, either for the cavalry, or for the ſervice of the artillery. The towns of the moſt extenſive commerce in Switzerland are Zurich, Zurzach, a bourg famous for its fairs, Schaffauſen, Bern, St. Gall, and Baſle or Bazil.

St. Gall is a town of Switzerland, 5 miles weſt of the lake of Conſtance. See *St. Gall.*

The principal commerce of this town conſiſts in its manufacture of linens, which trade is there ſo conſiderable, as to put the weavers upon a par with the nobility; ſo that they make with the gentlemen the firſt of the twelve tribes whereof the town is compoſed: beſides, manufactures of ſmall woollen ſtuffs alſo flouriſh there.

The external commerce of all theſe Swiſs towns is very conſiderable; yet it muſt be confeſſed, that if the trade they entertain with France is not ſo extenſive as that with ſome others of their neighbours, it is notwithſtanding both more profitable, and more honourable than any other, by reaſon of the great number of privileges which the French monarchs have granted in general to the whole Helvetic nation, and in particular to its traders.

The chief privileges the Switzers enjoy in France are the right of naturalization, which puts them upon an equality in all reſpects with the native French; the freedom of the fairs of Lyons, which they may exerciſe, and extend 15 days beyond the ordinary franchiſe, a thing not granted to any other nation, not even to the French; the entire remittance of ſeveral duties of importation for their manufactures; the liberty of buying up yearly certain quantities of the corn of Alſace, and other neighbouring provinces of France. Laſtly, the ſame privilege with regard to the ſalt of Franche-Comté, and ſome others, which may be ſeen in the different treaties made between France and the Swiſs cantons, in the reigns of Charles VII. and Lewis XII.

Geneva. The city of Geneva is very conſiderable on account of its antiquity, advantageous ſituation, the great number of its inhabitants, and eſpecially by its great commerce. It lies within the bounds of Savoy, and is allied with the cantons of Fribourg, Berne, and Zurich. See *Geneva.*

Its correſpondence with the traders of Marſeilles and Amſterdam, facilitates for it an intercourſe by ſea; and there is ſcarce a part of the earth, howſoever diſtant, where the nations of Europe ſend ſhipping, but ſome of the Genevians are met with, either in quality of factors, or trading on their own account; ſeveral even freighting entire ſhips, or purchaſing them for long voyages.

As to the commerce by land, the moſt conſiderable is that with France; particularly with Lyons; and next with Italy, Germany, and Holland.

The impreſſion of books at Geneva is in reputation; yet the printers are found fault with for not uſing good paper, and not being exact enough in the corrective part: however, the commerce of books is one of the richeſt carried on there.

The making of clocks is alſo pretty good there, and comes next to that of London, and Paris.

The manufactures moſt in repute there, are gold and ſilver lace; ribbons either of gold, ſilver, ſilk, or even ſimple thread; ſilk ſtuffs, with various kind of jewellers work, and trinkets.

Beſides all theſe merchandiſes manufactured at Geneva, ſtrangers may find there ſeveral others, which the Genevians have from their neighbours; as all kinds of Italian ſilks, Lyons taffetas, other ſilks ſtuffs of the ſame place, callicoes, muſlins, cambrics, fine linens, porcelain, tea, and chocolate brought there by the Dutch; laſtly, all kinds of drugs and ſpices that come from Marſeilles.

SYNDIC, in government and commerce, an officer in ſeveral countries intruſted with the affairs of a city, or other community, who calls meetings, makes repreſentations and ſolicitations to the miniſtry, or magiſtracy, according to the exigence of the caſe. The ſyndic is appointed to anſwer and account for the conduct of the body; makes and receives propoſals for the advantage thereof; controuls and corrects the failings of particular perſons of the body, or at leaſt procures their correction at a public meeting. In effect, the ſyndic is, at the ſame time, both agent and cenſor of the community. Almoſt all the companies in Paris, as the univerſity, and com-

 panies

panies of arts and trades, have their ſyndics; as have moſt of the cities of Provence and Languedoc.

SYNDIC is alſo uſed for a perſon appointed to ſollicit ſome common affair, wherein he himſelf has a ſhare; as happens particularly among ſeveral creditors of the ſame debtor, who fails or dies inſolvent.

The chief magiſtrate of Geneva is alſo called ſyndic; where there are four ſyndics choſen every year, the eldeſt of whom preſides in the council of twenty five, which is the chief council of the city, wherein all affairs are diſpatched, both civil and political: thus the other three elect cannot all come at the office till the four years end; ſo that the ſyndicate rölls among ſixteen perſons, all choſen out of the council of twenty-five.

SYRA. An iſland of the Turkiſh Archipelago. See *Turkiſh* Iſlands.

SYRACUSE. A city and port-town of Sicily, in the province of Valde Noto, ſituated in 15 deg. 5 min. of E. lon. and 37 deg. 25 min. of N. lat. on a fine bay of the Mediterranean, on the eaſt coaſt of the iſland, 65 miles S. of Meſſina.

SYROP, in pharmacy, an agreeable liquor, or compoſition of a moderately thick conſiſtence, made of juices, tinctures, or waters of fruits, flowers, or herbs boiled up, and ſweetened with ſugar or honey, and taken either for health or pleaſure.

There are various kinds of ſyrops, denominated from the various fruits they are extracted from; as ſyrop of violets, of elder, of poppies, and the like; emetic ſyrops, lienteric, and antinephritic ſyrops: chologogue, phlegmagogue ſyrops, and others.

SYROP *of Sapor*, is an ancient medicament, the baſe whereof is apples, with juices of bugloſs, aniſe, and ſaffron; thus called by Sapor king of Perſia, who overcame the emperor Valerian, ſuppoſed to be the inventor thereof.

T.

TAC

TABACCO. See *Tobacco*.

TABAGO. One of the neutral Caribbee iſlands, lying in 59 deg. of W. lon. and in 11 deg. 30 min. of N. lat. 120 miles ſouth of Barbadoes.

TABARCA. An iſland on the coaſt of Barbary, in Africa, ſituated in 8 deg. of E. lon. and 36 deg. 30 min. of N. lat. 50 miles weſt of Tunis.

TABBY, in commerce. A kind of coarſe taffety watered; which is manufactured like the common taffety, excepting that it is ſtronger and thicker, both in the woof and warp. See *Taffety*.

The watering is given by means of a calender; the rolls being either of iron or copper, variouſly engraven; which, bearing unequally on the ſtuff, render the ſurface thereof unequal, ſo as to reflect the rays of light differently.

TABBYING. The paſſing the ſtuff under a calender, to make the repreſentation of waves thereon, as on tabby. It is uſual to tabby mohairs and ribbands; but this tabbying is performed without the addition of any water or dye, and furniſhes the modern philoſophers with a ſtrong proof that colours are only appearances.

TABELLA, or *Tablet*, in pharmacy. A ſolid kind of electuary, or confection, made of dry ingredients, uſually with ſugar, and formed into little flat morſules, or ſquares, more uſually called lozenges, ſometimes morſelli, or troches; powders, fruits, and ſalts, being diſſolved in ſugar, and made into tabulæ, like thoſe of the juice of liquorice, for colds.

TABELLIO, in the Roman law. A ſcrivener; a kind of office often confounded with notary: yet the two differed in this, that the notaries only drew up, and kept the minutes of acts and inſtruments on paper, and in notes, or ſhort-hand; whereas the tabelliones delivered them engroſſed fairly on parchment, and in full executory form; alſo putting the ſeals to contracts, and rendering them authentic: but the domeſtic clerks of theſe tabelliones, who at firſt wrote under them, in proceſs of time, came to be called notaries. See *Notary*.

Paſquier obſerves, that the tabelliones at Rome were public ſlaves, appointed for the keeping of contracts made between private perſons. According to Loyſeau, a contract wrote by a notary, was not perfect or obligatory, till the tabellio had wrote it fair; after which the parties ſubſcribed it, that is, they wrote at the bottom that they approved the contents; for ſignatures were not then in uſe.

TABLE-*diamond*. See *Diamond*.

TABLE-*mountain*, at the Cape of Good Hope. The moſt northern cape or promontory of Africa, which here forms a bay called Table bay.

TABLES *of logarithms and rhumbs*, are uſed in geometry and navigation.

Loxodromic TABLES, are tables wherein the difference of longitude, and quantity of the way run in any rhumb, are exhibited to every ten minutes of every degree of the quadrant variation of the latitude. See *Rhumb*.

TACAMACHA, or *Tacamahaca*. A kind of reſinous gum, diſtilling from the trunk of a very large tree, growing in New Spain; but in greateſt abundance in the iſland of Madagaſcar.

This tree is not unlike the poplar, only bigger and taller, its leaves ſmall and green, its fruit red, of the ſize of walnuts, exceedingly reſinous, and containing a ſtone like peaches. The wood of the tree makes good timber for ſhips, and the gum it yields ſerves for their caulking; though its chief uſe is in medicine.

TAF

There are three kinds of Tacamacha; the ſublime, called alſo tacamacha in the pod; tacamacha in maſs; and tacamacha in tears. The firſt is the natural reſin, as it oozes of itſelf, without any inciſion made in the tree; the good is dry, reddiſh, tranſparent, of a bitter taſte, and a ſtrong ſmell, reſembling that of lavender. The iſlanders gather it in little gourds, divided in two, and covered with a palm-leaf.

The tacamachas in tears, and in the maſs, are thoſe which flow from the tree by inciſions: they muſt be choſen dry and clear, and their ſmell reſembling that of the firſt kind.

Gum Tacamacha, is found good for digeſting and diſſolving tumours, and aſſuaging pains. Burnt upon coals, it is reckoned good for hyſteric fits in women, and likewiſe applied to the belly in form of a plaſter. Some apply it to the temples in the ſame manner, and to the nape of the neck, for pains in the head, defluxions of rheum upon the throat, and inflammation of the eyes, as alſo in the tooth-ach. It is of ſo ſubtile and penetrating a nature, that it is greatly uſed in external applications, to ſuppurate and diſperſe tumours, and is eſteemed effectual in thoſe that are ſcrophulous. It is alſo uſed externally in arthritical pains with ſucceſs: in effect, the Indians uſe it for all kinds of pains; and Schroder affirms, that he has ſeen intolerable pains in the leg removed by it.

TACK *about*, in navigation. A term uſed at ſea, when a ſhip's head is brought about, ſo as to lie the contrary way. To effect this, they firſt make her ſtay; which done, ſhe is ſaid to be paid: they then let riſe and hale; that is, let the lee-tack riſe, and hale aſt the ſheets, and ſo trim all the ſails by a wind as they were before.

TACKLE, or *Tackling*, in navigation, includes all the ropes or cordage of a ſhip, with their furniture, whereby the ſails are managed.

TACKLES, are more properly uſed for ſmall ropes running in three parts, having at one end a pendant, with a block faſtened to them, or elſe a lannier; and at the other end a block and hook, to hang goods upon that are to be heaved into the ſhip, or out of it. There are ſeveral kinds of tackles; as the boat-tackle, ſerving to hoiſt the boat in and out; the tackles belonging to the maſts, ſerving as ſhrouds, to keep the maſts from ſtraining; the gunners tackles, with which the ordnance are hoiſted in and out; and the like.

TACKLE *porters*. See *Porters*.

TAEL, called by the Portugueſe *Telle*, and by the Chineſe *Leam*, is a ſmall Chineſe weight, making about 1 ounce 2 drams avoirdupois; and is particularly uſed at Canton, where 16 taels make 1 catis, and 100 catis the pic, each pic making 125 pounds avoirdupois.

TAEL, is alſo a Japaneſe money of accompt; which likewiſe, as well as at China, may paſs for a real coin; a tael of Japaneſe ſilver being worth about 1 s. 10 d. ſterling.

TAFFAREL, or *Tafferel*, in a ſhip. The uppermoſt part, frame, or rail, abaft, over the poop.

TAFFETY. A kind of fine ſilken ſtuff; having uſually a remarkable luſtre, or gloſs. See *Silk*, *Alamode*, and *Luſtring*.

Taffetas noir luſtre, is our alamode; and *non luſtre*, is our luſtring.

There are taffeties of all colours; ſome plain, others ſtriped, with gold, ſilver, and ſilk; others chequered, others flowered, others in the Chineſe point, others the Hungarian; with various others, to which the mode, or the caprice of the workmen, give ſuch whimſical names, that it would be as difficult as it is uſeleſs to rehearſe them; beſides that, they ſeldom hold beyond the year in

which they roſe. The old names of taffeties, and which ſtill ſubſiſt, are taffeties of Lyons, of Spain, of England, of Florence, and of Avignon.

The chief conſumption of taffeties is in womens dreſſes for ſummer, in linings, ſcarves, coifs, window-curtains, and the like.

There are three things which contribute chiefly to the perfection of taffeties, the ſilk, the water, and the fire. The ſilk is not only to be of the fineſt kind, but it muſt be worked a long time, and very much, before it is uſed. The watering, beſides that it is to be given very ſlightly, ſeems only intended to give that fine luſtre, by a peculiar property not found in all waters. Laſtly, the fire which is paſſed under it to dry the water, has its peculiar manner of application, whereon the perfection of the ſtuff very much depends.

Octavio May, of Lyons, is held the firſt author of the manufacture of gloſſy taffeties; and tradition tells us the occaſion of it. Octavio, it ſeems, going backwards in the world, and not able to retrieve himſelf by the manufacture of taffeties, ſuch as were then made, was one day conſidering on his misfortunes, and, in muſing, chanced to chew a few hairs of ſilk which he had in his mouth. His reverie being over, the ſilk he ſpit out ſeemed to ſhine, and on that account engaged his attention. He was ſoon led to reflect on the reaſon; and, after a good deal of thought, concluded that the luſtre of that ſilk muſt come, 1ſt, From his having preſſed it between his teeth; 2dly, From his having wet it with his ſaliva, which had ſomething glutinous in it; and, 3dly, From its having been heated by the natural warmth of his mouth. All this he executed upon the next taffeties he made; which immediately acquired immenſe riches to himſelf, and to the city of Lyons the reputation it ſtill maintains, of giving the gloſs to taffeties better than any other city in the world.

Herb TAFFETIES. See *Herb* taffeties.

TAFFOUSSA, or *Tafouſi*. A medicinal drug, found in the kingdoms of Camboya and Siam; being eſteemed greatly by the Chineſe, and other eaſtern nations; who make it one of the principal merchandiſe of their cargo of return from Camboya and Siam.

TAGUS. The largeſt river of Spain, which riſes on the confines of Arragon, and runs S. W. through the provinces of New Caſtile and Eſtramadura; paſſing by the cities of Aranjuez, Toledo, and Alcantara: it then croſſes Portugal, and forms the harbour of Liſbon, where it is about three miles over, and falls into the Atlantic ocean eight or ten miles below that city.

TAIL, or *Taile*, is uſed for what is vulgarly called a tally. See *Tally*.

TAINE. A port-town of Scotland, lying in 3 deg. 45 min. of W. lon. and 58 deg. of N. lat. ſituated on the frith of Dornock, in the ſhire of Roſs, oppoſite to the town of Dornock, 12 miles north of Cromarty.

TAITCHEU. A city and port-town of China, in Aſia, lying in 121 deg. of E. lon. and 29 deg. of N. lat. ſituated on the coaſt of the Pacific ocean, 260 miles S. E. of Nanking.

TAKE *and Leave*, in the ſea-language. The ſailors ſay, a ſhip can take and leave upon her when ſhe will, when ſhe ſails ſo well that ſhe can come up with another, or out-ſail her at pleaſure.

TALAMONE. A port-town of Tuſcany, ſituated in 11 deg. 50 min. of E. lon. and 42 deg. 33 min. of N. lat. on the coaſt of Del Preſidii, 15 miles north of Orbitello, ſubject to Spain.

TALC, or *Talk*, in natural hiſtory. A ſhining, ſquamous, fiſſile ſpecies of ſtone, eaſily ſeparable into thin tranſparent ſcales or leaves.

Antiently talc was found in Spain, but afterwards in Egypt and Cappadocia; as alſo in Arabia and Africa: at preſent they dig it in the Alps and Apennines, in ſeveral mountains in Germany, and even in England, particularly in Northamptonſhire.

Two kinds of talc are uſually diſtinguiſhed; namely, white talc of Venice, and red of Muſcovy; to which may be added parget, or the Engliſh talc.

That from Venice is the moſt eſteemed; which is brought in large, ſhining, greeniſh ſtones; but becomes white, and exceedingly tranſparent when wrought. It appears greaſy to the touch, though there is ſcarce any ſtone drier; yet it pulverizes with difficulty, nor is it eaſily calcined. Its chief uſe is as a ſcreen or cover for paintings in miniature and crayons, for which purpoſe thin ſlices thereof are uſed. It is ſometimes alſo uſed for a fucus; in order to which, by reaſon of the difficulty of pulverizing it, they content themſelves to raſp it with the ſkin of a ſea-dog, and to paſs the raſping through a ſieve. Pliny, in his natural hiſtory, lib. 36. cap. 22. obſerves, that the Romans not only uſed it for window-lights, but they alſo paved the circus with the ſame.

The talc brought from Muſcovy is uſually reddiſh in the ſtone; but it ſeldom comes to England otherwiſe than in leaves, which are very hard, ſmooth, gloſſy, and exceedingly tranſparent. It is found in quarries in Ruſſia and Perſia, and is uſed there to make lanthorns, to cover paintings, and the like.

Some chemiſts, and other empirics, have held, that talc might be uſed for many more important purpoſes; and pretend to draw from it that precious oil, ſo much boaſted of by the antients, particularly the Arabs, called oil of talc, which is ſuppoſed a wonderful coſmetic, and preſerver of the complexion: but the truth is, the word talc, among them, ſignified no more than an equal diſpoſition of the humours, which keep the body in good temperament, and perfect health.

Now, as nothing contributes more than health to the preſerving of beauty, this has given occaſion to the chemiſts to ſearch this oil of talc, which is to maintain the body in this diſpoſition, and to engage the ladies to be at the expence of the ſearch.

Some have alſo pretended, that yellow or red talc contained the ſeeds of gold; and that a menſtruum might be drawn from it, to tranſmute metals into gold or ſilver, to fix mercury, and the like; but this is mere charletanery.

TALE. The number or account of any thing.

TALE, is uſed both as a money of accompt, and as a weight, in China; the former being 10 mace, or 100 candarins, or 1000 caxas, or 6 s. 8 d. ſterling; and the latter being 10 mace, or 100 candarins, or 4 ounces and 10 drams.

TALENT. A quantity of gold or ſilver, particularly uſed among the Jews; weighing, according to ſome writers, 114 lb. 15 dwt. troy; though, by others, only 113 lb. 6 oz. 1 dram, 10 gr. and 7 dwt. In ſilver it is eſtimated at 342 l. 3 s. 9 d. ſterling; and in gold 5475 l. ſterling.

TALLAGE. A certain rate, according to which barons and knights were anciently taxed by the king for the expences of the ſtate; and inferior tenants by their lords, on certain occaſions.

This latter tallage of the cuſtomary tenants, was ſometimes fixed and certain, and ſometimes at the pleaſure of the lord; though it was alſo ſometimes compounded for.

Tallages were anciently called cuttings; which name is ſtill retained in Ireland, though in a different ſignification; but tallage, ſays Sir Edward Coke, is a general name, including all taxes.

TALLOW. A ſort of animal fat, melted down and clarified; there being ſcarce any animal that tallow may not be prepared from; but thoſe which yield the moſt, and whereof the moſt uſe is made, are the horſe, bullock, ſheep, hog, goat, deer, bear, and viper: ſome of which tallows, or fats, are uſed in medicine; moſt of the reſt being uſed in making ſoap, and the dreſſing of leather; but chiefly in the making of candles.

By the acts paſſed in the 18th Elizabeth, and 13th and 14th Charles II. tallow, and raw hides, ſhipped with an intent to be tranſported, are forfeited, with treble the value, a year's impriſonment of the maſters and mariners, and loſs of their goods and chattels, if they know of it, and of the ſhip, if with the owners knowledge. Owners, maſters, or mariners, diſcovering within three months after their return, or knowledge thereof, are to be acquitted.

TALLOW-CHANDLER. A perſon who makes candles with tallow.

TALLOW-CHANDLERS *company of London*, was incorporated by letters patent of the 2d of Edward IV. in 1463, by the name of The maſter and keepers, and commonalty of the art and myſtery of tallow-chandlers of the city of London; who anciently not only dealt in candles, but likewiſe in oil, vinegar, butter, hops, ſoap, and other things; at which time great frauds were committed by adulterating oil; for the preventing whereof this company was, by act of parliament, impowered to ſearch the ſame, and to deſtroy all ſuch as ſhould be found bad; but, no reward being aſcertained for the ſearchers, it was ſoon neglected.

Great abuſes being committed in other goods wherein this company dealt, occaſioned them to apply to Queen Elizabeth, for a power to redreſs the ſame; which they obtained by letters-patent, when the execution thereof was vigorouſly oppoſed by the court of lord mayor and aldermen.

This company is governed by a maſter, 4 wardens, and 38 aſſiſtants, with a livery of 170 members; who, when admitted, pay a fine of 15l. and have a ſtately hall on Dowgate-hill, wherein they treat of their affairs.

TALLOW-TREE, in China, is a tree growing in great plenty in that country, which produces a ſubſtance like tallow, and ſerving for the ſame purpoſe. It is about the height of a cherry-tree, bearing leaves in form of a heart, of a deep, ſhining red colour, and the bark very ſmooth. Its fruit is incloſed in a kind of pod, or cover, like a cheſnut, and conſiſts of three round white grains, of the ſize and form of a ſmall nut, each having its peculiar capſula, and within a little ſtone, which is encompaſſed with a white pulp, that has all the properties of true tallow, both as to conſiſtence, colour, and even ſmell: accordingly, the Chineſe make their candles of it; which would doubtleſs be as good as thoſe in England, or any part of Europe, if they knew how to puriſy their vegetable tallow, as well as Europeans do the animal tallow: but all the preparation they give it, is to melt it down, and mix a little oil with it, to make it ſofter, and more pliant. It is true, their candles made of it yield a thicker ſmoak, and a dimmer light, than ours; but thoſe defects are owing, in a great meaſure, to the wicks, which are not of cotton, but only a little rod, or ſwitch of dry light wood, covered with the pith of a ruſh, wound round it; which being very porous, ſerves to filtrate the minute parts of the tallow, attracted by the burning-ſtick, that by this means is kept alive.

TALLY, or *Taillie*. A piece of wood, whereon retail traders uſe to ſcore or mark, by notches or inciſions, the ſeveral quantities of goods they deliver out on credit, to ſave the trouble of writing down ſo many little articles in books.

Each ſcore conſiſts of two pieces of wood, or rather of a ſingle piece cleft length-wiſe, the parts whereof falling in with one another, the things delivered are ſcored on both at the ſame time, the ſeller keeping one, and the buyer the other.

Tallies are taken as evidences in courts of juſtice, as much as books; and the ancient way of keeping all accompts was by tallies; the debtor ſtill keeping one part, and the creditor the other.

There are three kinds of tallies mentioned in the Engliſh ſtatutes, and long uſed in the exchequer.

TALLIES *of loans*. One part whereof is kept in the exchequer, and the other part given to particular perſons, in lieu of an obligation for the money they have lent to the government on acts of parliament. This laſt part is called the ſtock, and the former the counter-ſtock, or counter-tail.

The tallies are numbered, bear the perſon's name, and the ſum lent: thus we ſay, the tallies number have been paid, diſcharged; tallies are riſen, fallen, 4, 5, 6, and the like.

TALLIES, or *Tailes of debt*, are a kind of acquittances for debts paid the king: as for example, the univerſity of Cambridge pays yearly 10l. for ſuch things as are by charter granted them in fee-farm. He that pays this, receives a taile or tally for his diſcharge; with which, or a note of it, he repairs to the clerk of the pipe, and there for the tally receives a full diſcharge on parchment.

TALLYMAN. One who ſells goods to the poorer ſort of people on credit, to be paid a little at a time by weekly payments.

TALWOOD. See *Fuel*.

TAMARINDS. A kind of medicinal fruit, of a tart agreeable taſte, brought from the Eaſt as well as the Weſt Indies; being called by ſome Indian dates, and by others the Indian acacia. The tree which yields it, called by the Indians tamarinds, and the Portugueſe tamarindos, is not unlike the aſh, or walnut-tree; its leaves reſemble thoſe of female fern, and its flowers are joined 8 or ten together, like thoſe of the orange-tree. Its fruit is in a pod, the length of a finger, and the thickneſs of the thumb, covered at firſt with a green rind, which afterwards becomes brown, and contains a blackiſh acid pulp, among which are found ſeeds reſembling lupines. It is this pulp alone that is brought to us, and uſed in medicine.

Tamarinds muſt be choſen big, of a jet colour, a briſk taſte, not too dry, and ſuch as have not been laid in the cellar, nor falſified with molaſſes of ſugar and vinegar. They are found laxative, cooling, and good to quench thirſt. In burning fevers, they are preſcribed to moiſten and cool the mouth.

TAMBAC, or *Tambaqua*. A mixture of gold and copper, which the people of Siam hold more beautiful, and ſet a greater value, on than gold itſelf. Some travellers ſpeak of it as a metal found in its peculiar mines; but upon what authority, is not known. The Abbé de Choiſy, in his journal of Siam, doubts whether it may not be the electrum or amber of Solomon. The ambaſſadors of Siam brought ſeveral works in tambac to Paris, in the reign of Lewis XIV. which were not found ſo beautiful as was expected.

TAMLING. A name given by the Siameſe to a kind of money and weight, called by the Chineſe tael. See *Tael*. The tael of Siam is about one half lighter than the Chineſe; ſo that the Siameſe cati is worth but 8 Chineſe taels, and 20 Siameſe taels but one Chineſe cati.

TAMMY. A ſtrong ſort of worſted ſtuff, or wove manufacture.

TAN. The bark of the oak, chopped, and ground, by a tanning-mill, in a coarſe powder, to be uſed in the tanning, or dreſſing of ſkins.

New tan is the moſt eſteemed; for when old it loſes a deal of its effect, in condenſing or cloſing the pores of the ſkins; ſo that the longer the ſkins are kept in tan, the greater ſtrength and firmneſs they acquire. In effect, not only the bark, but every part of the oak-tree, of what age or growth ſoever, and even oaken coppice, cut in barking-time, makes as good tan as the beſt bark; which muſt be well dried in the ſun, houſed dry, and kept ſo. To uſe it, the greater wood may be ſhaved ſmall, or cleft in little pieces by a tanning-engine for the purpoſe; this done, it is well dried again on a kiln, and then ground by the mill; but where oak is ſcarce, thorns may ſupply the defect. See *Tanning*.

TANAIS. A river. See *Don*.

TANDAGA. One of the moſt eaſterly of the Philippine iſlands in Aſia, lying in 124 deg. of E. lon. and 12 deg. of N. lat. ſubject to the King of Spain. See *Philippine* iſlands.

TANG, is a kind of fine, plain, or flowered muſlin, brought by the Engliſh from the Eaſt Indies; the piece being 16 ells in length, and 3-4ths in breadth.

TANGA. A money of account uſed in ſome parts of the Eaſt Indies, particularly at Goa, and upon the coaſt of Malabar.

There are two ſorts of tangas, the one of good, and the other of bad alloy; the tanga of good is by 1-5th more than the bad; ſo that if 4 tangas of good be given for the pardao xerafin, 5 of the bad muſt be given for the ſame.

TANGIER. A port-town of Africa, in the empire of Morocco, and kingdom of Fez, lying in 7 deg. of W. lon. and 35 deg. 40 min. of N. lat. ſituated on the ſtraits of Gibraltar. It was the capital of the ancient

Mauritania Tingitana, taken from the Moors by the Portugueſe, and by them transferred to Charles II. King of England, in 1661, when he married the Princeſs Catharine, Infanta of Portugal; but the King being at a great charge in keeping up the fortifications, and maintaining a numerous garriſon againſt the continual attacks of the Moors, the works were blown up and demoliſhed, and the garriſon withdrawn from thence in 1683.

TANI. The better kind of the two ſilks brought by Europeans from Bengal; the other, called monta, being only ferret.

TANJEBS. A kind of muſlin, brought from the Eaſt Indies, particularly from Bengal; the piece being generally 16 ells in length, and 3-4ths in breadth.

TANJEBS, are alſo a kind of muſlin handerchiefs, edged with ſilk, brought from the Eaſt Indies.

TANNING. The preparing of ſkins or hides in a pit, with a tan and water, after having firſt taken off the hair, by ſteeping them in lime-water. See *Tan*, and *Hide*.

Method of TANNING *cows, calves, and horſe hides.* The ſkin being flead off the carcaſs, if it is intended to be kept, is ſalted with ſea-ſalt and alum, or with a kind of ſaltpetre called natron: if it is not for keeping, the ſalting is ſaved, as being of no uſe, but to prevent the hide from corrupting before it can be conveniently carried to the tan-houſe. Whether the hide has been tanned or not, the tanner begins with taking off the horns, the ears, and the tail; after, it is thrown into a running water for 30 hours, to waſh off the blood and other impurities adhering to the inſide. This done, it is laid over-night in a lime-pit, already uſed; whence it is taken, and left to drain 3 or 4 days on the edge of the pit; then it is returned to a ſtrong lime-pit for two days, and taken out for four, and thus for ſix weeks alternately, taken out, and put in, twice a week. At the ſix weeks end, it is put into a freſh pit, where it continues 8 days, and is taken out for ſo many, and this alternately for a year or eighteen months. Every freſh lime-pit they throw the ſkins into, is ſtronger and ſtronger. At five or ſix weeks end the tanner ſcrapes off the hair on a horſe, with a knife made for the purpoſe. After a year or eighteen months, when the hair is perfectly gone, he carries it to the river to waſh, and takes off any remains of fleſh and filth on the ſide of the hair. The ſkin is now covered over with tan, as it is ſtretched in the pit, and water let in upon it. If the ſkin be ſtrong, five coverings of tan will be required; for weaker, 3 or 4 will ſuffice. When the hides are ſufficiently tanned, they are taken out of the pit to be dried, by hanging in the air; though, in Champagne, the tanners give the firſt preparation with barley inſtead of lime.

TANNING-*mill*. See *Mill*.

TAORMINA. A port-town of Sicily, ſituated in 15 deg. 30 min. of E. lon. and 38 deg. 15 min. of N. lat. in the province of Demona, 18 miles S. of Meſſina.

TAPER, denotes a kind of ſmall wax-candle, placed in a candleſtick, and burnt at ſeveral proceſſions, or in other church-ſolemnities. See *Candle*.

Tapers are made of different ſizes; in ſome places, as in Italy, they are cylindrical; but in England, France, and moſt other countries, they are conical, or taper, whence poſſibly their name; unleſs we rather chuſe to derive taper in the adjective ſenſe from the ſubſtantive *taper*, in the Saxon tapen, or tapon, *cereus*, a wax-candle. Both kinds are pierced at bottom for a pin in the candleſtick to enter.

TAPESTRY, or *Tapiſtry*. A curious kind of manufacture, ſerving to adorn a chamber, or other apartment, by hanging or lining the walls thereof. Some uſe the word tapeſtry as a general name for all kinds of hangings, whether woven or wrought with the needle; and whether of ſilk, wool, linen, leather, or paper, in which they are countenanced by the etymology of the word, formed from the French *tapiſſer*, to line, or of the Latin *tapes*, the cover of a bed: but, in the common uſe of our language, the term is now appropriated to a kind of woven hangings, of wool and ſilk, frequently raiſed and enriched with gold and ſilver, repreſenting the figures of men, animals, and landſkips.

The invention of tapeſtry ſeems to have come from the Levant; and what makes this more probable is, that formerly the workmen concerned herein, were called, at leaſt in France, ſarazins, or ſaraſinois.

It is ſuppoſed that the Engliſh and Flemiſh, who were the firſt that excelled herein, might bring the art with them from ſome of the croiſades, or expeditions againſt the Saracens.

Be this as it will, it is certain thoſe two nations, particularly the Engliſh, were the firſt who ſet on foot this noble and rich manufacture in Europe, now one of the fineſt ornaments of palaces, baſilicæ, and churches. Hence, if they be not allowed the inventors, they have at leaſt the glory of being the reſtorers of ſo curious and admirable an art, as gives a kind of life to wools and ſilks, in no reſpect inferior to the paintings of the beſt maſters. It was late before the French applied themſelves to tapeſtry; the firſt eſtabliſhment of that kind was under Henry IV. in the year 1607, in the fauxbourg St. Michael; but this fell with the death of that prince. Under Lewis XIV. the manufacture was retrieved by the care and addreſs of the great Mr. Colbert, to whom the eſtabliſhment of the Gobelins is owing, a royal tapeſtry manufacture, which has produced works in this kind ſcarce inferior to the fineſt Engliſh or Flemiſh tapeſtry, either with regard to the deſign, the colours, or the ſtrength. See *Gobelins*.

The tapeſtry-men diſtinguiſh two kinds of work, namely, tapeſtry of the high and low; though the difference is rather in the manner of working, than in the work itſelf, which is in effect the ſame in both; only the looms, and conſequently the warps, are differently ſituated; thoſe of the low warp being placed flat, and parallel to the horizon; and thoſe, on the contrary, of the high warp, erected perpendicularly.

The Engliſh formerly excelled all the world in their tapeſtry of the high warp; and they yet retain their former reputation, though with ſome little change: their low warps are ſtill admired; but as for the high ones, they are quite laid aſide.

The French have three conſiderable tapeſtry-manufactures beſide that of the Gobelins, the firſt at Aubuſſon in Avergne, the ſecond at Felletin in the Upper Marche, and the third at Beauvois; which were all equally eſtabliſhed for the high and the low warp; but have all laid aſide the former, excepting the Gobelins. There are admirable low warps in Flanders, generally exceeding thoſe of France; but the chief, and almoſt only Flemiſh manufactories, are at Bruſſels, Antwerp, Oudenarde, Liſle, Tournay, Bruges, and Valenciennes.

At Bruſſels and Antwerp they ſucceed both in human figures, in animals, and landſkips; both with regard to the deſigning, and the workmanſhip. At Oudenarde their landſkips and animals are good, but their human figures bad. Liſle, and the other cities named, come behind Oudenarde. The French manufacture of Felletin does tolerably well in landſkips, Aubuſſon in figures, and Beauvois in both.

There are but two things to add; the firſt, that this high warp goes on much more ſlowly than the low warp, and takes almoſt double; the ſecond, that all the difference the eye can obſerve between the two kinds conſiſts in this, that in the low warp there is red fillet, about 1-12th of an inch broad, running on each ſide from top to bottom, which is wanted in the high warp.

What is very remarkable in the manufacture of the low warp, and which is common to it with the high, is, that it is all wrought on the wrong-ſide; ſo that the workman cannot ſee the right-ſide of his tapeſtry till the piece is finiſhed and taken out of the loom.

A manufactory of tapeſtry has been lately eſtabliſhed at Fulham in Middleſex, under the direction of Mr. Priſcot; but it does not ſeem to be properly encouraged.

TAPSEL. A ſtriped coarſe cotton cloth, uſually blue, brought from the Eaſt Indies, particularly from Bengal; the piece is 10 ells in length, and 3-4ths in breadth; being one of the beſt merchandiſes the Europeans can bring to the coaſts of Guinea for the negro trade.

TAQUIS. Cotton cloths manufactured at Aleppo, and in its neighbourhood.

TAR, or *Tarr*. A groſs, pitchy liquor, iſſuing from the trunks of old pines, or firs. See *Pitch*.

When theſe trees are on the turn, and only fit for burning, they cut off the bark all round towards the root; and through theſe inciſions, there continues flowing for a conſiderable time a blackiſh liquor, which is the tar. When this ceaſes, it is a ſure indication the pine is quite dead, and only fit for the fire. The chief uſe of tar, is for the coating and caulking of ſhips; and it alſo ſerves to make roſin. See *Roſin*.

TARAGON. A city and port-town of Spain, in the province of Catalonia, lying in 1 deg. 15 min. of E. lon. and 41 deg. 6 min. of N. lat. ſituated on the Mediterranean ſea, 45 min. S. W. of Barcelona.

TARANTO. A port-town of Italy, in the kingdom of Naples, ſituated in 18 deg. 15 min. of E. lon. and 40 deg. 32 min. of N. lat. on the gulph of Otranto, 45 miles weſt of the city of Otranto.

TARE *and Tret*, in commerce, is any defect, waſte, or diminution in the weight, the quantity, or the quality of goods; the ſeller being uſually to account to the buyer for the tare and tret. See *Tret*.

TARE, is more particularly uſed for an abatement, or deduction, in the price of the commodity, on account of the weight of the cheſts, caſks, bags, and frails. See *Diſcount*.

The tare is very different in different merchandiſes, and in ſome there is none at all allowed. It is a thing much more regarded in Holland, than in England, or elſewhere. Mr. Ricard, treating of the commerce of Amſterdam, obſerves, that the tares are one of the moſt conſiderable articles a merchant is to be acquainted with, if he would trade with ſecurity. Sometimes the tare is, as it were, regulated by cuſtom; but generally, to avoid all diſpute, the buyer and ſeller make a particular agreement about it. It may be here neceſſary to add, from the fore mentioned author, ſome inſtances of tares allowed at Amſterdam; referring the reader, for a more ample account, to his *Negoce d'Amſterdam*, edit. 1722.

Spaniſh wools are ſubject to a kind of double tare; for, firſt, they deduct the tare marked on the bales, and after that 24 lb. tare for every every 175 lb. weight, beſide the rebate for prompt payment. Indeed, for the common wools, the ſeller will ſeldom allow above 14 *per cent.* for the whole tare; for which reaſon the bargain is to be agreed on before.

Tare of Roman allum is 4 lb. *per* ſack.
— of Iriſh beef and butter, 20 *per cent.*
— of crude borax, 15 lb. *per cent.*
— of cinnamon, 17 lb. the burthen.
— of capers, 33 *per cent.*
— of white pepper, 40 lb. *per* barrel.
— of black pepper, 5 lb.

The tares and allowanees now in the practice in the port of London are as follow.

A.

Allum, in caſks, tare 12 lb. *per cent.*
Aſhes, called pot-aſhes, 10 lb. *per cent.*
Argol, in caſks, 14 lb. *per cent.*

B.

Backs for chimneys of half a hundred weight, and downwards, to be accounted ſmall, and all above that weight large.
Baſket-rods, the bundle, 3 feet about at the band.
Barilla, in double ſerons, 314 lb. weight, tare 28 lb.
Battery, in fats, tare 8 lb *per cent.*
Books unbound, 800 make a maund.
Brimſtone, in caſks, tare 8 lb. *per cent.*
Briſtles, in fats, about 500 lb. weight, tare 84 lb.
Bulruſhes, the load 60 bundles.

C.

Capers, for tare 1-3d part.
Cheſts of iron, large, 1 yard 1-4th long.
——— middle, 1 yard long,
——— ſmall, 1-4th of a yard.
Cochineel, in cheſts covered with ſkin, about 100½, tare 50 lb.

D.

Drugs. Aloes ſocotrina, in cheſts, about 300½, tare 80 lb.
Epatica, in gunny, about 100, 8 lb.; about 2 or 300 weight, 14 lb.
Antimony, in caſks, tare 6 lb. *per cent.*
Argentum ſublimatum, or quickſilver, in boxes, barrels, and leather, about 100 and a quarter, and 100 and a half, for tare 36 lb.
——— in barrels, the ſame weight, 14 lb.
Aſſa fœtida, in baſkets, about a quarter of a hundred, for tare 3 lb. *per* baſket.
Benjamin, in cheſts, about 300½, 90 lb.; in gunny, about 100 weight, 8 lb.; about 200 and 300, 14 lb.
Bole, in caſks, for tare 8 lb. *per cent.*
Camphire, in tubs, about half or three quarters of a hundred, for tare 18 lb.
Carraway ſeeds, in canvas bales, about 300 weight, tare 10 lb.
Cardamoms, in bales, about 200 weight, 14 lb.
Cinabrium, or vermillion, in tubs, about 300½, tare 36 lb.
Coloquintida, in cheſts, tare 1-3d.
Cubebs, in bags, tare 4 lb.
Green ginger, in jars, about 100 weight, tare 28 lb.
Iſinglaſs, in fats, about 300½ or 400 weight, for tare 84 lb.
Jujubes, in fats, tare 16 lb. *per cent.*
Lack, gum and ſeed, in gunny, about 100, 7 lb.; 2 or 300, 14 lb.
Myrrh, in cheſts, from 300½ to 400 weight, for tare 92 lb.
Olibanum, in gunny, 2 or 300 weight, for tare 14 lb. 100 weight, tare 8 lb.
Pitch, called Burgundy pitch, in ſtands, about 200¾, tare 56 lb.
Prunelloes, in boxes, about 14 lb. weight, for tare 3 lb. *per* box.
Tinckul, in duppers, about 100 or 100¼, for tare 16 lb.; about 100½, 20 lb.
Turmerick, in gunny, about 100½, 14 lb. tare; about 100 weight, for tare 10 lb.
Verdigreaſe, in leather, about a quarter of a hundred and 14 lb. for tare 3 lb.
Vitriolum Romanum, in duppers, about 100 weight, 14 lb.

F.

Flax, the laſt to contain 1700 weight.
Feathers, for tare 4 lb. *per cent.*
Fruit, in baſkets, for tare 4 lb. *per* baſket.

G.

Grocery. Galls, in double bags, from Aleppo and Smyrna, for tare 7 lb. *per* double bag; in ſingle bags, 4 lb. *per* bag.
Almonds, in caſks, tare 14 lb. *per cent.*; in bags, 4 lb. *per* bags; in ſerons and bags, about 200 weight, for tare 18 lb. and ſo proportionably.
Aniſeeds, in ſerons and bags, about 300¾, for tare 18 lb.
——— from Smyrna, with felts, about 300½, for tare 20 lb. without felts, the ſame weight, 14 lb.
Cinnamon, in gunny, about three quarters of 100, for tare 12 lb.
Currants, in buts and caroteels, for tare 16 lb. *per cent.* in quarterol, 20 lb. *per cent.*; in bags, about 400 weight, 10 lb. *per* bag.
Figs, in barrels, tare 14 lb. *per cent.*
Mace, in caroteels, about 6 or 700 weight, for tare 70 lb.
Pepper, in bags, for tare 4 lb. *per* bag, about 300.
Prunes, in puncheons, or uncertain caſks, 19 lb. *per cent.*
Raiſins, in frails, tare 6 lb. *per* frail.
——— of Lippera, in barrels, about 100 weight, 14 lb. tare.
——— ſolis, in caſk, tare 12 lb. *per cent.*
Sugar, in bales, from India, 36 lb. tare; in cheſts, 1-3d part; in caſks, 1-6th; in caſks, St. Thome, 1-5th part;

part; loaf-ſugar, in caſks, with paper, thread, and ſtraw, for tare 16 lb. *per cent.*; ſugars in caniſters, for tare 1-6th.

H.

Harneſs-plates, or breaſts, to be accounted for iron doubles.

Hemp, called ſteel-hemp, in fats, for tare 14 lb. *per cent.*

Hair, called goats hair, in canvas, for tare 4 lb. *per cent.*

Hops, in bags, for tare, 4 lb. *per cent.*

I.

Indico, in cheſts, covered with ſkins, about 100¾, for tare 48 lb.

—— in bales, with skins, about 100½, 16 lb.

K.

Kettle fats, for tare 8 lb. *per cent.*

L.

Lattin, or round bottoms, in fats, for tare 8 lb. *per cent.*

Linen, Flemiſh and Dutch meaſure, to be allowed 2 *per cent.* except Gentiſh meaſure brown, to which add 5 *per cent.*

M.

Madder, in bales great and ſmall, ſingle and double bags, for tare 28 lb.; in fats, for tare 10 lb. *per cent.*

O.

Oils, in certain casks, 1 in 20 allowed for leakage, under 10 none; in candy-barrels, tare 29 *per* barrel; in uncertain casks, 28 *per cent.* 7½ lb. make a gallon, 252 gallons make a tun.

S.

Safflower, in bales, about 600 weight, for tare 84 lb. in bags, from 200 to 300, 16 lb. *per* bag.

Saltpetre, in cask, tare 12 lb. *per cent.* in gunny, about 100¼, tare 16 lb.

Sumach, in bags, about 300½, 10 lb.; from 200 to 300, for tare 8 lb.; about 700 weight, 14 lb.

Silk thrown, or orgazine, and raw. In ſhort bales of Bolognia, with ſear-cloth, and cotton-wool, about 200 weight, tare 28 lb.; in long bales, with ſear-cloth and cotton-wool, the ſame weight, 30 lb.

In Naples bales, with ſear-cloth, about 200 weight, 18 lb.; tangot of Naples, about 100½, with ſear-cloth, tare 14 lb. and ſo downwards proportionally.

In Meſſina bales, double canvas, thrown and raw, about 200 weight, 10 lb.; with ſear-cloth and cotton-wool, the ſame weight, 22 lb.

In long bales of Aleppo, with cotton-wool, about 300¼, and downwards to 200¼, for tare 32 lb

In fangots of Aleppo, about 200¼ or 200½, with cotton-wool, 24 lb.

In fangots of Aleppo, about 100¾ or 200, tare 20 lb.; about 100¼, or 100¾, 18 lb.

Ardas ſilk of Aleppo, in ſhort bales, with cotton-wool, from 300¼ to 200¾, for tare 30 lb.

Of Smyrna and Cyprus, about 300 weight and upwards, for tare 16 lb.; downwards to 200 weight, 14 lb. from 200 downwards, 12 lb.

In bales of Perſia, 200¼, 20 lb.

Smalts, or powder-blue, in casks, for tare 10 lb. *per cent.*

Sope, called Caſtile ſope, in double ſerons, about 300 weight, for tare 30 lb.; in ſingle ſerons, the ſame weight, 26 lb.; in cheſts, about 200½ or 300 weight, 40 lb.

Succads, in cheſts, about 100½, 40 lb. tare.

T.

Tallow, from Ruſſia and Ireland, in casks, for tare 12 lb. *per cent.*

Teazels, the half pack contains 10,000.

Siſters-Thread, to have no allowance.

Thread, called whited brown, outnal, and black and brown, or bridges, to have allowance of 6 *per cent.* for want of weight; Spaniſh, in barrels, about 200¼, for tare 28 lb.; in half barrels, about 100¼, 18 lb.; in potaccoes, without canvas, 14 lb.; in potaccoes, covered with canvas, 16 lb.; and in potaccoes, covered with skins, 26 lb.

Tobacco, Virginia, in hogſheads, weighing under 300 weight, for tare 70 lb.; from 300 to 400, 80 lb. from 400 to 500, 90 lb. from 500 weight and upwards, 100 lb.

—Barbadoes, in rolls upon ſticks, about a quarter of a hundred, 6 lb. *per* ſtick.

—Bermudas, in cheſts, 20 lb. *per cent.*; in casks, about 300 weight, tare 60 lb.; about 200½ and downwards 200, or 100¾, 50 lb.

Turpentine, in casks, tare 1-5th part.

W.

Wire of Lattin, and iron in casks, for tare 6 lb. *per cent.*

Wool, called beaver-wool, in hogſheads and brizles, for tare 75 lb.; in crobies, tare the cover, which is 1-3d of the whole; cotton-wool, for tare 4 d. *per cent.*; Spaniſh, in bales, for cloth, about 200 weight, for tare 28 lb.; ditto, in bales for felts, about 200¼, the ſame; Segovia, Spaniſh, for felts, for about 200 tare 15 lb. Lambs, Eſtridge, and Poliſh, for tare 4 lb. *per cent.*

Wormſeeds, in bales, with felts, from Smyrna, about 300¼, tare 24 lb.; from Aleppo with cotton-wool, 24 lb.

Y.

Yarn, called cable-yarn, in winch from Ruſſia, for tare 28 lb.; cotton-yarn, in bales from India, about 300½, for tare 43 lb.; in bags from Turkey, for tare 5 lb. *per cent.*; grogram, and mohair-yarn, in bales from Aleppo, with cotton-wool, 28 lb. tare, and ſo downward proportionably; from Smyrna with felts, about 400 weight, 28 lb.; without felts, about the ſame weight, 18 lb.; in fangots, without felts, about 100¾, or 200, for tare 14 lb.; with felts, skins, and cottons, 16 lb.; without felts, about 100½, 12 lb.; linen-yarn in fats, tare 12 lb. *per cent.*

TARE, or *Tarre*, is alſo a ſmall ſilver coin of India, current on the coaſt of Malabar; 16 tares being equivalent to 1 fanon, a ſmall piece of gold, worth 7 d. ſterling. *Tare of heads*, is a term at Smyrna for one of the tares in each bale of ſilk, which is 40 drachms *per* batman in the Ardaſſine ſilk, and 20 in the fine.

TARIF, or *Tariff*, book of rates. A table, or catalogue, drawn uſually in alphabetical order, containing the names of ſeveral kinds of merchandiſe, with the duties or cuſtoms to be paid for the ſame, as ſettled by authority, and agreed on between the ſeveral princes and ſtates that hold commerce together. See *Duties*, and *Cuſtoms*.

TARIFFA. A port-town of Spain, in the province of Andaluſia, ſituated in 6 deg. 15 min. of W. lon. and 36 deg. of N. lat. at the entrance of the ſtraits of Gibraltar, 18 miles weſt thereof, and 24 north of Tangier.

TARIN. A ſilver coin of Sicily, being 120 pichilis, or 3 1/13 d. ſterling.

TARIN, is alſo a money of accompt uſed in Naples, Sicily, and Malta. At Naples the tarin is worth about 8 d. ſterling; and at Malta 20 grains, which is much the ſame.

TARKU. A port-town of Perſia, in the province of Chirvan, and territory of Dagiſtan, ſituated in 51 deg. of E. lon. and 42 deg. of N. lat. on the weſt ſide of the Caſpian ſea, 300 miles N. E. of Tauris, and as much S. of Aſtracan.

TARNANTAN-CHAVONIS. A very white clear muſlin, or cotton-cloth, brought from the Eaſt Indies; the piece being 6 ells and a half in length, and 3-4ths in breadth.

TARNISHING. A diminution of the natural luſtre of any thing, eſpecially a metal.

Gold and ſilver, when tarniſhed, reſume their brightneſs, by ſetting them over the fire with certain leys.

Copper, braſs, and pewter, that are tarniſhed, recover their luſtre with tripoli and pot-aſhes.

TAROTS. A ſort of playing cards, uſed by the Spaniards, Germans, and ſome other foreigners; which, inſtead of being marked with hearts, diamonds, ſpades, and clubs, have cups, deniers, ſwords, and ſticks, called by the Spaniards copas, dineros, eſpadillas, and baſtos.

TARPAULIN, or *Tarpawling*, is a piece of canvas, well pitched and tarred over, to keep off the rain from any place. The term is alſo uſed in deriſion for a perſon bred at ſea, and educated in the mariners art.

TARRACE, *Tarraſs*, or *Terrace*. A coarſe ſort of plaiſter,

plaiſter, or mortar, durable in the weather; chiefly uſed to line baſons, ciſterns, wells, and other reſervoirs of water.

TARTANE. A kind of bark, uſed for fiſhing and carriage; having neither a raiſed poop nor prow, but uſing oars: they are common in the Mediterranean, having only a main-maſt and a mizzen, with triangular ſails. When a tartane puts up a ſquare ſail, it is called a ſail of fortune.

TARTAR, in chemiſtry. A kind of ſalt which riſes from wines, and, ſticking to the top and ſides of the caſks, forms a cruſt, which hardens to the conſiſtence of a ſtone. Tartar, ſays an ingenious author, has the juice of the grape for its father, fermentation for its mother, and the caſk for its matrix.

Its goodneſs rather depends on the number of repeated fermentations, which is made by a ſucceſſion of new wines in the ſame cask for ſeveral years, than on the ſoil or climate where the wine is produced. It is either white or red, according to the colour of the wine it is raiſed from. That brought from Germany is the beſt, as being taken out of thoſe great tuns, ſome whereof hold a thouſand pipes of wine; ſo that the ſalt has time to come to its conſiſtence, which is one of the chief qualities to be regarded in tartar. That of Montpelier is the next in order; then that of Lyons and Paris. The white tartar is preferable to the red, being really better, as containing leſs of the droſſy, or earthy part. The marks of good tartar of either kind, are its being thick, brittle, brilliant, and little earthy.

Tartar is of conſiderable uſe among dyers, as ſerving to diſpoſe the ſtuffs to take their colours the better.

The chemiſts make abundance of preparations from tartar; as cream, or cryſtal of tartar, which is nothing but tartar powdered, and reduced by means of boiling water, a ſtraining bag, and a cellar, into little chryſtals. See *Cream* of tartar.

Salt of TARTAR, is made of tartar waſhed, ground, purified, and calcined, by a reverberatory fire; or it is made by pulverizing what remains in the retort after the diſtilation of tartar, and calcining it as above by a reverberatory fire, to make it yield its ſalt, when put into hot water. On the one or the other of theſe preparations, they pour a great quantity of hot water, to make a lee of it, which they filtrate and evaporate by a ſand-heat, till the fixed ſalt be found at the bottom of the veſſel, which is the alkali, or fixed ſalt of tartar.

Oil of TARTAR, is the ſalt of tartar expoſed to the air for ſome days, in an open veſſel, in a moiſt place, till it diſſolves into an oil; though it is improperly called an oil, being no more than a diſſolved ſalt. Oil of tartar *per deliquium*, is held the beſt counter-poiſon to corroſive ſublimate.

TARTAR *foliated*, is a preparation of tartar with diſſolved vinegar, which reduces it into white leaves.

TARTAR *vitriolated*, which ſome call magiſtery of tartar, is oil of tartar mixed with rectified ſpirit of vitriol; upon mixing the two, there ariſes a great evaporation, by means whereof from liquids they become ſolids.

TARTARIZING. A term uſed by ſome writers, for the act of refining or purifying, by means of ſalt of tartar.

TARTARY, part of the ancient Scythia, is bounded by the frozen ocean on the north; the eaſtern ocean, and the land of Jeſſo, on the eaſt; by China, India, Perſia, and the Caſpian ſea, on the ſouth; by the river Oby, and an imaginary line drawn from thence to the mouth of the Volga, on the weſt.

Tartary may be divided into north and ſouth; and the north part again into Chineſian Tartary on the eaſt, and Muſcovite Tartary on the weſt. Southern Tartary may be thrown into four large diviſions, namely, Mogul Tartary, and Thibet, on the eaſt; and the Calmucks, and Uſbeck Tartars, on the weſt. There are alſo the Circaſſian Tartars, and Tartars of Aſtracan, which lie farther weſt; but theſe are included in Muſcovite Tartary, being for the moſt part ſubject to the Ruſſian empire.

Muſcovite Tartary is generally held to extend as far eaſtwards as the river Argun, in 105 deg. of E. lon. and the weſtern boundary, from the mouth of the Tanais, lies in the 39th deg. of lon: ſo that Muſcovite Tartary takes up about 4400 miles in length, and is about 1800 in breadth; which, with the Ruſſian dominions in Europe, makes it a country of the largeſt extent in the known world ſubject to one prince.

The principal rivers are the Oby, the Volga, the Jeniſa, the Jeniſka, the Lena, and the Argun.

The ſeas of that part of Aſiatic Tartary which belongs to Ruſſia, are the frozen ocean, and the gulph of Mangaſia; both which lie on the north of it. Beſides theſe, there are ſeveral great lakes in the country, as that of Baikal, ſome hundreds of miles in length, and between 20 and 30 broad, of clear freſh water, into which the river Selinga empties itſelf. All that part of Muſcovite Tartary, which lies to the eaſtward of the river Oby, may be comprehended under the general name of Siberia; though the north-weſt part of it frequently goes by the name of Samoieda, and the north-eaſt part of it is called the country of the Oſtiacks.

The principal towns in Siberia, are Tobolski, the capital, ſituated near the confluence of the rivers Tobol and Irtis, in 63 deg. of E. lon. and 57 deg. of N. lat. About 600 miles to the ſouthward of Tobolski, ſtands the city of Tara, upon the ſame river Irtis; which is but a ſmall town, and, inſtead of other fortifications, ſurrounded only with a paliſade. The next remarkable town on the road to China is Tomskoi; afterwards Janſeiska; and, between 4 and 500 miles to the eaſtward of Janſeiska, Bratskoy; to the ſouthward of Bratskoy, Irkutskoy; beſides ſome others, as Kabonski, Udenskoy, and Silinginskoi, which is the laſt town in the Ruſſian dominions towards China, having a fort and garriſon commanded by a Ruſſian governor.

On the north-ſide of the ſtraits of Waigats, and the gulph of Mangaſia, lies Nova Zembla, or New-land, which the Dutch call the iſland of Waigats.

Along the river Irtis, to the ſouth-eaſt of Tobolski, live ſome hords of Mahometan Tartars, who are wealthy in cattle, having numerous flocks and herds. They have their own princes; but pay a tribute to Ruſſia of ſables, fox-skins, and other furs.

Beyond this people, in the great deſert of Baraba, live certain hords, called the Barbanisky Tartars. In winter they hunt for ſables; but in ſummer remove to the banks of their rivers, and employ their time in fiſhing.

A man may purchaſe any thing they have for a little tobacco, as they ſcarce know the uſe of money. Their cloaths are made of pieces of fur patched together; and they alſo pay tribute to Ruſſia.

At Tomskoi, to the eaſtward of this country in the road to China, there are plenty of fiſh, corn, and other proviſions. They have alſo a particular kind of furs, which the Ruſſians call Telansky Bielky, as white as ſnow, and larger than any other. The neighbouring mountains alſo yield lead, iron, and copper; and the Swediſh priſoners, who were confined in this part of the country, relate that gold-duſt has been found in ſeveral places.

Beyond the river Jenſeiska, in the road to China, live the Kamski Tartars; and more eaſterly the Bratskoy Tartars, who are a more ſubſtantial people; a private man being frequently maſter of 4 or 500 horſes, and a proportionable number of other cattle.

The government of Ruſſia monopolizes almoſt all the Siberian commodities; under which denomination are comprehended, not only ſuch things as are of the produce of Siberia, but whatever comes through that country from China. The produce of Siberia is principally the ſkins of foxes, ſables, hyenas, ermins, lynxes, and other furs; Chineſe gold and ſilks; and the teeth of a beaſt called maman, not unlike elephants teeth. The governors of towns, upon the leaſt ſuſpicion, will take to pieces the very carriages, to prevent the carrying off of any gold-duſt: but if a paſs be obtained from the governor of Siberia, which is not very difficult to get, a merchant may purchaſe almoſt any thing.

Since the defeat of the Swedes at the battle of Pultowa, Siberia has been greatly improved in the knowledge of mechanic arts, and the politer ſciences; becauſe the

part; loaf-ſugar, in caſks, with paper, thread, and ſtraw, for tare 16 lb. *per cent.*; ſugars in caniſters, for tare 1-6th.

H.

Harneſs-plates, or breaſts, to be accounted for iron doubles.

Hemp, called ſteel-hemp, in fats, for tare 14 lb. *per cent.*

Hair, called goats hair, in canvas, for tare 4 lb. *per cent.*

Hops, in bags, for tare, 4 lb. *per cent.*

I.

Indico, in cheſts, covered with ſkins, about 100¾, for tare 48 lb.

—— in bales, with skins, about 100½, 16 lb.

K.

Kettle fats, for tare 8 lb. *per cent.*

L.

Lattin, or round bottoms, in fats, for tare 8 lb. *per cent.*

Linen, Flemiſh and Dutch meaſure, to be allowed 2 *per cent.* except Gentiſh meaſure brown, to which add 5 *per cent.*

M.

Madder, in bales great and ſmall, ſingle and double bags, for tare 28 lb.; in fats, for tare 10 lb. *per cent.*

O.

Oils, in certain casks, 1 in 20 allowed for leakage, under 10 none; in candy-barrels, tare 29 *per* barrel; in uncertain casks, 28 *per cent.* 7½ lb. make a gallon, 252 gallons make a tun.

S.

Safflower, in bales, about 600 weight, for tare 84 lb. in bags, from 200 to 300, 16 lb. *per* bag.

Saltpetre, in cask, tare 12 lb. *per cent.* in gunny, about 100¼, tare 16 lb.

Sumach, in bags, about 300½, 10 lb.; from 200 to 300, for tare 8 lb.; about 700 weight, 14 lb.

Silk thrown, or orgazine, and raw. In ſhort bales of Bolognia, with ſear-cloth, and cotton-wool, about 200 weight, tare 28 lb.; in long bales, with ſear-cloth and cotton-wool, the ſame weight, 30 lb.

In Naples bales, with ſear-cloth, about 200 weight, 18 lb.; tangot of Naples, about 100½, with ſear-cloth, tare 14 lb. and ſo downwards proportionally.

In Meſſina bales, double canvas, thrown and raw, about 200 weight, 10 lb.; with ſear-cloth and cotton-wool, the ſame weight, 22 lb.

In long bales of Aleppo, with cotton-wool, about 300¼, and downwards to 200¾, for tare 32 lb

In fangots of Aleppo, about 200¼ or 200½, with cotton-wool, 24 lb.

In fangots of Aleppo, about 100¾ or 200, tare 20 lb.; about 100¼, or 100¾, 18 lb.

Ardas ſilk of Aleppo, in ſhort bales, with cotton-wool, from 300¼ to 200¾, for tare 30 lb.

Of Smyrna and Cyprus, about 300 weight and upwards, for tare 16 lb.; downwards to 200 weight, 14 lb. from 200 downwards, 12 lb.

In bales of Perſia, 200¼, 20 lb.

Smalts, or powder-blue, in casks, for tare 10 lb. *per cent.*

Sope, called Caſtile ſope, in double ſerons, about 300 weight, for tare 30 lb.; in ſingle ſerons, the ſame weight, 26 lb.; in cheſts, about 200½ or 300 weight, 40 lb.

Succads, in cheſts, about 100½, 40 lb. tare.

T.

Tallow, from Ruſſia and Ireland, in casks, for tare 12 lb. *per cent.*

Teazels, the half pack contains 10,000.

Siſters-Thread, to have no allowance.

Thread, called whited brown, outnal, and black and brown, or bridges, to have allowance of 6 *per cent.* for want of weight; Spaniſh, in barrels, about 200¼, for tare 28 lb.; in half barrels, about 100¼, 18 lb.; in potaccoes, without canvas, 14 lb.; in potaccoes, covered with canvas, 16 lb.; and in potaccoes, covered with skins, 26 lb.

Tobacco, Virginia, in hogſheads, weighing under 300 weight, for tare 70 lb.; from 300 to 400, 80 lb. from 400 to 500, 90 lb. from 500 weight and upwards, 100 lb.

—Barbadoes, in rolls upon ſticks, about a quarter of a hundred, 6 lb. *per* ſtick.

—Bermudas, in cheſts, 20 lb. *per cent.*; in casks, about 300 weight, tare 60 lb.; about 200½ and downwards 200, or 100¾, 50 lb.

Turpentine, in casks, tare 1-5th part:

W.

Wire of Lattin, and iron in casks, for tare 6 lb. *per cent.*

Wool, called beaver-wool, in hogſheads and brizles, for tare 75 lb.; in crobies, tare the cover, which is 1-3d of the whole; cotton-wool, for tare 4 d. *per cent.*; Spaniſh, in bales, for cloth, about 200 weight, for tare 28 lb.; ditto, in bales for felts, about 200¼, the ſame; Segovia, Spaniſh, for felts, for about 200 tare 15 lb. Lambs, Eſtridge, and Poliſh, for tare 4 lb. *per cent.*

Wormſeeds, in bales, with felts, from Smyrna, about 300¼, tare 24 lb.; from Aleppo with cotton-wool, 24 lb.

Y.

Yarn, called cable-yarn, in winch from Ruſſia, for tare 28 lb.; cotton-yarn, in bales from India, about 300½, for tare 43 lb.; in bags from Turkey, for tare 5 lb. *per cent.*; grogram, and mohair-yarn, in bales from Aleppo, with cotton-wool, 28 lb. tare, and ſo downward proportionably; from Smyrna with felts, about 400 weight, 28 lb.; without felts, about the ſame weight, 18 lb.; in fangots, without felts, about 100¾, or 200, for tare 14 lb.; with felts, skins, and cottons, 16 lb.; without felts, about 100½, 12 lb.; linen-yarn in fats, tare 12 lb. *per cent.*

TARE, or *Tarre*, is alſo a ſmall ſilver coin of India, current on the coaſt of Malabar; 16 tares being equivalent to 1 fanon, a ſmall piece of gold, worth 7 d. ſterling.

Tare of heads, is a term at Smyrna for one of the tares in each bale of ſilk, which is 40 drachms *per* batman in the Ardaſſine ſilk, and 20 in the fine.

TARIF, or *Tariff*, book of rates. A table, or catalogue, drawn uſually in alphabetical order, containing the names of ſeveral kinds of merchandiſe, with the duties or cuſtoms to be paid for the ſame, as ſettled by authority, and agreed on between the ſeveral princes and ſtates that hold commerce together. See *Duties*, and *Cuſtoms*.

TARIFFA. A port-town of Spain, in the province of Andaluſia, ſituated in 6 deg. 15 min. of W. lon. and 36 deg. of N. lat. at the entrance of the ſtraits of Gibraltar, 18 miles weſt thereof, and 24 north of Tangier.

TARIN. A ſilver coin of Sicily, being 120 pichilis, or 3 1/13 d. ſterling.

TARIN, is alſo a money of accompt uſed in Naples, Sicily, and Malta. At Naples the tarin is worth about 8 d. ſterling; and at Malta 20 grains, which is much the ſame.

TARKU. A port-town of Perſia, in the province of Chirvan, and territory of Dagiſtan, ſituated in 51 deg. of E. lon. and 42 deg. of N. lat. on the weſt ſide of the Caſpian ſea, 300 miles N. E. of Tauris, and as much S. of Aſtracan.

TARNANTAN-CHAVONIS. A very white clear muſlin, or cotton-cloth, brought from the Eaſt Indies; the piece being 6 ells and a half in length, and 3-4ths in breadth.

TARNISHING. A diminution of the natural luſtre of any thing, eſpecially a metal.

Gold and ſilver, when tarniſhed, reſume their brightneſs, by ſetting them over the fire with certain lees.

Copper, braſs, and pewter, that are tarniſhed, recover their luſtre with tripoli and pot-aſhes.

TAROTS. A ſort of playing cards, uſed by the Spaniards, Germans, and ſome other foreigners; which, inſtead of being marked with hearts, diamonds, ſpades, and clubs, have cups, deniers, ſwords, and ſticks, called by the Spaniards copas, dineros, eſpadillas, and baſtos.

TARPAULIN, or *Tarpawling*, is a piece of canvas, well pitched and tarred over, to keep off the rain from any place. The term is alſo uſed in deriſion for a perſon bred at ſea, and educated in the mariners art.

TARRACE, *Tarraſs*, or *Terrace*. A coarſe ſort of

plaiſter, or mortar, durable in the weather; chiefly uſed to line baſons, ciſterns, wells, and other reſervoirs of water.

TARTANE. A kind of bark, uſed for fiſhing and carriage; having neither a raiſed poop nor prow, but uſing oars: they are common in the Mediterranean, having only a main-maſt and a mizzen, with triangular ſails. When a tartane puts up a ſquare ſail, it is called a ſail of fortune.

TARTAR, in chemiſtry. A kind of ſalt which riſes from wines, and, ſticking to the top and ſides of the caſks, forms a cruſt, which hardens to the conſiſtence of a ſtone. Tartar, ſays an ingenious author, has the juice of the grape for its father, fermentation for its mother, and the caſk for its matrix.

Its goodneſs rather depends on the number of repeated fermentations, which is made by a ſucceſſion of new wines in the ſame cask for ſeveral years, than on the ſoil or climate where the wine is produced. It is either white or red, according to the colour of the wine it is raiſed from. That brought from Germany is the beſt, as being taken out of thoſe great tuns, ſome whereof hold a thouſand pipes of wine; ſo that the ſalt has time to come to its conſiſtence, which is one of the chief qualities to be regarded in tartar. That of Montpelier is the next in order; then that of Lyons and Paris. The white tartar is preferable to the red, being really better, as containing leſs of the droſſy, or earthy part. The marks of good tartar of either kind, are its being thick, brittle, brilliant, and little earthy.

Tartar is of conſiderable uſe among dyers, as ſerving to diſpoſe the ſtuffs to take their colours the better.

The chemiſts make abundance of preparations from tartar; as cream, or cryſtal of tartar, which is nothing but tartar powdered, and reduced by means of boiling water, a ſtraining bag, and a cellar, into little chryſtals. See *Cream* of tartar.

Salt of TARTAR, is made of tartar waſhed, ground, purified, and calcined, by a reverberatory fire; or it is made by pulverizing what remains in the retort after the diſtilation of tartar, and calcining it as above by a reverberatory fire, to make it yield its ſalt, when put into hot water. On the one or the other of theſe preparations, they pour a great quantity of hot water, to make a lee of it, which they filtrate and evaporate by a ſand-heat, till the fixed ſalt be found at the bottom of the veſſel, which is the alkali, or fixed ſalt of tartar.

Oil of TARTAR, is the ſalt of tartar expoſed to the air for ſome days, in an open veſſel, in a moiſt place, till it diſſolves into an oil; though it is improperly called an oil, being no more than a diſſolved ſalt. Oil of tartar *per deliquium*, is held the beſt counter-poiſon to corroſive ſublimate.

TARTAR *foliated*, is a preparation of tartar with diſſolved vinegar, which reduces it into white leaves.

TARTAR *vitriolated*, which ſome call magiſtery of tartar, is oil of tartar mixed with rectified ſpirit of vitriol; upon mixing the two, there ariſes a great evaporation, by means whereof from liquids they become ſolids.

TARTARIZING. A term uſed by ſome writers, for the act of refining or purifying, by means of ſalt of tartar.

TARTARY, part of the ancient Scythia, is bounded by the frozen ocean on the north; the eaſtern ocean, and the land of Jeſſo, on the eaſt; by China, India, Perſia, and the Caſpian ſea, on the ſouth; by the river Oby, and an imaginary line drawn from thence to the mouth of the Volga, on the weſt.

Tartary may be divided into north and ſouth; and the north part again into Chineſian Tartary on the eaſt, and Muſcovite Tartary on the weſt. Southern Tartary may be thrown into four large diviſions, namely, Mogul Tartary, and Thibet, on the eaſt; and the Calmucks, and Uſbeck Tartars, on the weſt. There are alſo the Circaſſian Tartars, and Tartars of Aſtracan, which lie farther weſt; but theſe are included in Muſcovite Tartary, being for the moſt part ſubject to the Ruſſian empire.

Muſcovite Tartary is generally held to extend as far eaſtwards as the river Argun, in 105 deg. of E. lon. and the weſtern boundary, from the mouth of the Tanais, lies in the 39th deg. of lon: ſo that Muſcovite Tartary takes up about 4400 miles in length, and is about 1800 in breadth; which, with the Ruſſian dominions in Europe, makes it a country of the largeſt extent in the known world ſubject to one prince.

The principal rivers are the Oby, the Volga, the Jeniſa, the Jeniſka, the Lena, and the Argun.

The ſeas of that part of Aſiatic Tartary which belongs to Ruſſia, are the frozen ocean, and the gulph of Mangaſia; both which lie on the north of it. Beſides theſe, there are ſeveral great lakes in the country, as that of Baikal, ſome hundreds of miles in length, and between 20 and 30 broad, of clear freſh water, into which the river Selinga empties itſelf. All that part of Muſcovite Tartary, which lies to the eaſtward of the river Oby, may be comprehended under the general name of Siberia; though the north-weſt part of it frequently goes by the name of Samoieda, and the north-eaſt part of it is called the country of the Oſtiacks.

The principal towns in Siberia, are Tobolski, the capital, ſituated near the confluence of the rivers Tobol and Irtis, in 63 deg. of E. lon. and 57 deg. of N. lat. About 600 miles to the ſouthward of Tobolski, ſtands the city of Tara, upon the ſame river Irtis; which is but a ſmall town, and, inſtead of other fortifications, ſurrounded only with a paliſade. The next remarkable town on the road to China is Tomskoi; afterwards Janſeiska; and, between 4 and 500 miles to the eaſtward of Janſeiska, Bratskoy; to the ſouthward of Bratskoy, Irkutskoy; beſides ſome others, as Kabonski, Udenskoy, and Silinginskoi, which is the laſt town in the Ruſſian dominions towards China, having a fort and garriſon commanded by a Ruſſian governor.

On the north-ſide of the ſtraits of Waigats, and the gulph of Mangaſia, lies Nova Zembla, or New-land, which the Dutch call the iſland of Waigats.

Along the river Irtis, to the ſouth-eaſt of Tobolski, live ſome hords of Mahometan Tartars, who are wealthy in cattle, having numerous flocks and herds. They have their own princes; but pay a tribute to Ruſſia of ſables, fox-skins, and other furs.

Beyond this people, in the great deſert of Baraba, live certain hords, called the Barbanisky Tartars. In winter they hunt for ſables; but in ſummer remove to the banks of their rivers, and employ their time in fiſhing.

A man may purchaſe any thing they have for a little tobacco, as they ſcarce know the uſe of money. Their cloaths are made of pieces of fur patched together; and they alſo pay tribute to Ruſſia.

At Tomskoi, to the eaſtward of this country in the road to China, there are plenty of fiſh, corn, and other proviſions. They have alſo a particular kind of furs, which the Ruſſians call Telansky Bielky, as white as ſnow, and larger than any other. The neighbouring mountains alſo yield lead, iron, and copper; and the Swediſh priſoners, who were confined in this part of the country, relate that gold-duſt has been found in ſeveral places.

Beyond the river Jenſeiska, in the road to China, live the Kamski Tartars; and more eaſterly the Bratskoy Tartars, who are a more ſubſtantial people; a private man being frequently maſter of 4 or 500 horſes, and a proportionable number of other cattle.

The government of Ruſſia monopolizes almoſt all the Siberian commodities; under which denomination are comprehended, not only ſuch things as are of the produce of Siberia, but whatever comes through that country from China. The produce of Siberia is principally the ſkins of foxes, ſables, hyenas, ermins, lynxes, and other furs; Chineſe gold and ſilks; and the teeth of a beaſt called maman, not unlike elephants teeth. The governors of towns, upon the leaſt ſuſpicion, will take to pieces the very carriages, to prevent the carrying off of any gold-duſt: but if a paſs be obtained from the governor of Siberia, which is not very difficult to get, a merchant may purchaſe almoſt any thing.

Since the defeat of the Swedes at the battle of Pultowa, Siberia has been greatly improved in the knowledge of mechanic arts, and the politer ſciences; becauſe the

Swediſh officers, who were baniſhed there, having no means left for their ſubſiſtence, were obliged to turn their genius this way; and it is ſurpriſing to what a degree of perfection they arrived in their reſpective employments.

Circaſſian TARTARY, is bounded by Aſtracan, and the Caſpian ſea, towards the eaſt; by Georgia, and Dageſtan, towards the ſouth; by the river Don, the Palus Meotis, and the Black ſea, towards the weſt; and by Ruſſia, towards the north. The inhabitants generally acknowledge themſelves dependent on the empire of Ruſſia; though ſuch as lie next to Perſia, and Turky, may be reckoned under the dominion of the one or other of theſe empires: but nothing is more common, than to put themſelves ſometimes under the protection of one prince, and ſometimes under another. Their moſt conſiderable town is Terki, ſituated in 52 deg. of E. lon. and 43 deg. 41 min. of N. lat. which is inhabited chiefly by Ruſſians; for the Tartars live in tents; and the greateſt traffic of the country ſeems to be in young ſlaves, which they take in their excurſions; though they make no manner of ſcruple of ſelling their own children into Turky and Perſia, eſpecially their daughters, who will part with their parents without any reluctance; having been frequently entertained with relations of the preferment of thoſe who have been ſold before them to princes and baſhaws; as alſo that ſome of them have arrived to the honour of ſultanas, in the harams of the Grand Signior and the King of Perſia.

The country of the *Calmuck Tartars*, is bounded by Siberia, on the north; Mongul Tartary, on the eaſt; Thibet, and Uſbec Tartary, on the ſouth; and the Caſpian ſea, and the kingdom of Aſtracan, upon the weſt. The inhabitants are not under any one ſovereign, but are divided into ſeveral hords, or tribes; though, for the moſt part, they are in amity with Ruſſia, and many of them tributary to it. During the winter, they hunt ſables, martins, ermins, and other beaſts which afford furs. In the reign of the late Czar, they traded to Aſtracan, and to Tobolski, the capital of Siberia, with tea and China goods; bringing with them alſo great quantities of very fine ſalt, which their country afforded; receiving Ruſſia leather, and iron-ware, in exchange, and ſome money. But the Czar commanded one of his generals to march into their country, and take poſſeſſion of their ſalt-works, and build a fort there; which the Calmucks ſo highly reſented, that they forebore to reſort to the fair of Tobolski ever ſince. They alſo choked up the mouth of the river Duria, which falls into the Caſpian ſea, where the Muſcovites uſed to come in ſearch of gold-duſt.

Uſbec Tartary, is bounded by the country of the Calmucks, towards the north; by Thibet, towards the eaſt; by the Mogul's empire, towards the ſouth; and by the kingdom of Perſia, and the Caſpian ſea, towards the weſt. The chief town is Samarcand, ſituated in 66 deg. of E. lon. and 40 deg. of N. lat.; the inhabitants of the country, like their neighbours, being at this day divided into ſeveral hords or tribes, who have their reſpective princes.

Perſia, and India, are ſupplied from this country with their beſt ſoldiers; it being from hence that India is alſo furniſhed with the moſt ſerviceable horſes, camels, and other cattle.

The *Mongul Tartars* have Muſcovite and Chineſian Tartary, on the north; the great ſtep, or deſert, which ſeparates them from China, on the eaſt; Thibet, on the ſouth; and Calmuck Tartary, towards the weſt: but they have little to diſtinguiſh them from the Uſbec, except their religion.

Thibet Tartary, is bounded by the Calmucks, and Mongalia, towards the north; by China, towards the eaſt; by India, on the ſouth; and Uſbec, on the weſt. Theſe people, as they border upon China, imitate the Chineſe in their cuſtoms and manners; but are governed by their reſpective princes, and are perpetually in motion with their flocks and herds.

There are ſome other countries in Europe, which ſtill retain the name of Tartary: but theſe are ſeparated from the others by the Palus Meotis, and the Black ſea; being Little Tartary, Crim Tartary, and Budziac Tartary; which are all ſubject to Turky.

TASOT, is the 24th part of the cobit, or Surat ell; each taſot containing ſomewhat more than an inch; ſo that the cobit is about two feet.

TASSO, or *Tharſus*. One of the ſmalleſt iſlands in the Turkiſh Archipelago, or Egean ſea, ſituated in 27 deg. of E. lon. and 40 deg. 30 min. of N. lat. near the coaſt of Romania, or Thrace, 30 miles north of Lemnos, and 40 S. E. of Conteſſa.

TAUGHT, or *Taut*, in the ſea-language, is the ſame as tight, ſtiff, or faſt: thus they ſay, ſet taught the ſhrouds, the ſtays, or any other ropes, when they are too ſlack or looſe.

TAUNT. A ſea-term: when the maſts of a ſhip are too tall for her, the ſailors ſay, ſhe is taunt-maſted.

TAWING, or *Skinning*. The art or manner of preparing or dreſſing skins in white, to fit them for uſe in ſeveral manufactures, particularly gloves and purſes.

All kinds of ſkins may be tawed; but it is chiefly thoſe of horſes, ſheep, lambs, kids, and goats, that are uſed to be dreſſed this way; theſe laſt being the fitteſt for gloves.

Method of tawing. The wool or hair being well got off the skins, by means of lime, they are laid in a large vat of wood or ſtone ſet in the ground, full of water, wherein quick-lime has been ſlaked; where they continue a month or ſix weeks, as the weather is more or leſs hot, or as the skins are required to be more or leſs ſoft and pliant

TAY. A river of Scotland, which divides it into north and ſouth Scotland, riſing from the loch or lake of Tay, in Broadalbin, in the ſhire of Perth; it then runs eaſt through Athol; afterwards turns S. E. dividing the county of Angus from that of Fife; and falls into the frith of Tay.

TAYLOR. A man who cuts out cloth, and makes it into cloaths, fit for perſons to wear.

TAYLORS *company*. See *Merchant*-taylors.

TAX. A public impoſition, or rate, ſet upon perſons or things. See *Cuſtoms*, *Duties*, *Exciſe*, and *Subſidy*.

The ancient tax was what the ſubſidy is at preſent, excepting that the tax is now fixed to a certain ſum, being the 15th part of the place anciently valued at; whereas the ſubſidy is variable, as occaſion offers; and that the tax was levied upon the cities and towns, but the ſubſidy on perſons. See *Subſidy*.

Anciently the tax ſeems to be impoſed by the King at his pleaſure: but Edward I. bound himſelf, and his ſucceſſors, from that time forward, not to levy it without the conſent of the realm.

The people of France were ſtrangers to tallies, or taxes, till the time of St. Lewis; when they were firſt impoſed in form of ſubſidies, neceſſary for the ſupport of the war in the holy land; there being extraordinary levies, which were raiſed by capitation, but were afterwards made perpetual under Charles VII. and Philip the Fair.

Taxes are not to be laid upon the neceſſaries of life; but on things that ſerve for luxury, curioſity, ornament, and pomp. So that whenever exceſs is chaſtiſed, the greateſt burden falls upon the rich and powerful; while labourers and mechanicks, who are a branch of the commonwealth, whom it is moſt our intereſt to ſupport, are relieved and made eaſy. It is in ſome meaſure a reformation, to render luxuries expenſive. The greateſt evil in taxes and royal revenues, proceeds from the receivers and collectors; for oftentimes they lay heavier burdens, than the revenue itſelf; nor do ſubjects bear any thing with ſo much reluctance, as the oppreſſion of officers in collecting the duties.

If the wars Great Britain engaged in were abſolutely neceſſary for us to carry on in the manner we did; ſurely, every man in England, had he foreſeen the conſequence, would have ſubmitted to a juſt and equal pound-rate upon his annual income, whether from land, trade, or buſineſs; rather than ſubject himſelf, the trade, and people of his country, to ſo many dangers and difficulties, by obliging our rulers to raiſe taxes upon conſumption. Nay, this would have been for the particular intereſt of every man in the kingdom; for it might be demonſtrated, that from

a pound rate of 2 s. in the pound only, juſtly and equally aſſeſſed, and effectually carried into execution, we ſhould, with moderate taxes upon luxury, ſo as not to occaſion ſmuggling, have raiſed more money annually than the war coſt us, even in the laviſh manner it was carried on; whereas it is now generally admitted that every man in the kingdom one with another, pays 8 s. in the pound, on account of our taxes upon conſumption.

But when that which we call a land-tax was firſt thought of, there were many miſtakes in the methods propoſed for carrying it into execution, particularly that of laying the whole upon the landlord; whereas one moiety only ſhould have been laid upon the land, and the other upon the tenant. It will be ſaid, that a tax upon the tenant is really a tax upon the landlord, becauſe it diſables the tenant from paying ſuch a high rent as he otherwiſe might: but does not a tax of equal amount, upon conſumption, produce the ſame effect? In this reſpect, therefore, they are equal. What then muſt be the conſequence of a tax on conſumption of quadruple the amount? And, in general, we ought to conſider, that a tax, like every other burden, is the more eaſily borne the more ſhoulders it is put on, unleſs put on ſuch ſhoulders as cannot bear any part of it; for then you are forced to bear the bearer, as well as his ſhare of the burden: which will always be the conſequence of laying taxes upon workmen, labourers, and ſervants, or upon any thing they muſt neceſſarily conſume; for ſuch taxes only ſerve to enhance the price of labour, and conſequently the price of every thing thereby produced; which of courſe leſſens our exportation, and injures every branch of our trade.

Many other miſtakes might be pointed out; but perhaps ſome of the courtiers of thoſe days deſigned, that this method of raiſing money ſhould not prove effectual, in order to reduce us to the neceſſity of taxing conſumption: firſt, Becauſe ſuch taxes muſt always lie heavy upon trade, fiſheries, and manufactures, and conſequently prevent our being ſuch formidable rivals to the the Dutch: 2dly, Becauſe ſuch taxes increaſe the power of miniſters, and give them the abſolute diſpoſal of large ſums of money; as they have the power not only of naming the officers employed in the collection, but of appointing what number of officers, and what ſalaries, they think fit. Theſe are reaſons for ſuch an opinion; and the then Marquis of Halifax ſeems to have been of the ſame opinion; as appears from a tract of his, publiſhed in the hiſtory of England, by an impartial hand.

The deſign of the court, therefore, being to render taxes upon conſumption neceſſary, they gave themſelves no trouble about the aſſeſſment that was to be made, in order to raiſe money by a pound-rate: but, on the contrary, connived at moſt of the lands in the kingdom, being aſſeſſed at leſs than half their yearly value; and at aſſeſſing ſtock in trade, inſtead of aſſeſſing the yearly profits, made by trade, or any other ſort of employment; as to both which, indeed, they were warranted by the practice of former times; but the circumſtances of the nation were now very different. In former times, before the reſtoration, or rather before the civil wars, in the reign of Charles I. annual taxes were not neceſſary. Our aids and ſubſidies, 10ths and 15ths, were granted only on particular occaſions, when war, or any other misfortune, required an extraordinary public expence; and as war was then generally but of ſhort duration, theſe taxes did not often require to be annually renewed: but now, when we muſt have annual taxes, ſuch taxes muſt be impoſed either upon conſumption, or upon annual profits. It is therefore ridiculous to talk of ſtock in trade; becauſe ſome employments require a great ſtock, and yet may yield but very little profits; and others yield a great annual profit, without any ſtock. As experience is the beſt inſtructor, it is eaſy to ſhow the miſchiefs that muſt be brought upon a free trading country by taxes upon conſumption, eſpecially when raiſed by exciſes.

Theſe miſchiefs every thinking man in the kingdom is now ſenſible of; but our landed gentlemen having once got their eſtates aſſeſſed at ſuch an undervalue, they would never think of effectual methods of taxing any other ſort of yearly income; becauſe, if they had, they muſt have conſented to a new aſſeſſment, and indeed to frequent aſſeſſments of their own eſtates; and as taxes upon conſumption give miniſters ſuch an addition of power, it is not to be expected that they will ever think of raiſing money for the public ſervice by any other method.

This is the true cauſe of our having ſo long, and ſo obſtinately perſiſted in this method of raiſing the neceſſary and annual ſupplies. It is true, that by this method the people are not ſo ſenſible of the public expences, or of what they pay towards them, eſpecially as every tax is mortgaged as ſoon as impoſed: but for this very reaſon every honeſt man ought to be againſt it; for the people ought always to be made ſenſible of both; becauſe they will then look more narrowly into the public accompts; they will be more cautious of involving themſelves in war; they will prevent miniſters engaging in any wild and deſtructive ſchemes, or periſhing in them, after experience has ſhown them to be impracticable; for any man of parts will allow, that by this method alone it was poſſible for our miniſters to bring the nation under ſuch a load of debts, as are incredible to a ſtranger to enumerate. See National *Debt*.

It is therefore only proper to ſubjoin a liſt of ſuch things as are either charged with high duties at their importation, or high exciſes at home, being ſuch as every family almoſt is either more or leſs obliged to make uſe of, and then leave it to the judgment and deciſion of every conſidering man, whether this matter is over-rated or not.

Velvets, and all foreign wrought ſilks, lace, callicoes, muſlins, and all foreign linen, all foreign wines, arrack, rum, and brandy; all home diſtilled ſpirits, beer, ale, cyder, mum, perry, ſweet wines, and vinegar, china-ware, wrought-plate, wire, cards, and dice; hides, leather, parchment, vellum, paper, paſteboard, whale-fins, and oil; coffee, tea, and chocolate; cinnamon, cloves, nutmegs, mace, ginger, and pepper; all manner of apothecaries drugs; almonds, raiſins, plumbs, and all ſorts of grocery-ware; moloſſes, ſugar, ſoap, candles, ſnuff, ſtarch, tobacco, ſalt, and hops.

Now, when we take a view of this formidable liſt, and conſider the large quantities of ſome of theſe things which are uſed and conſumed in the families of noblemen, gentlemen, tradeſmen, merchants, ſhopkeepers, and farmers, and that no family can ſubſiſt without the uſe and conſumption of many others of them, we may be tempted to think, that the calculation is too low, which places it at an average of 20 s. a year each perſon, and at 14 l. a year each family, taking one family with another. See *Land*, and *Manufacture*.

TAXERS. Two officers yearly choſen in Cambridge, to ſee the gauge of all weights and meaſures obſerved. The name had its riſe from taxing and rating the rents of houſes, which was anciently the duty of their office.

TCHEOUZE. A kind of Chineſe taffety, pretty cloſe, and ſo pliable as not to be folded when preſſed; and the conveniency of waſhing it like linen, occaſions its uſe for the ſame purpoſes.

TEA, *Thea*, or as the Japaneſe call it *Tcha*. The leaf of a tree or ſhrub, growing in ſeveral provinces of China, Japan, and Siam, whoſe infuſion is in general uſed as a drink. The plant affects vallies, the feet of mountains, and a ſtony ſoil.

Its ſeed is uſually ſown in places expoſed to the ſouth, and bears three years after; the root reſembles that of the peach-tree; the leaves are green, longiſh at the point, pretty narrow, an inch and a half in length, and jagged all around.

The flower is much like that of the wild-roſe; the fruit is of different forms, ſometimes round, ſometimes long, ſometimes triangular, of the ordinary ſize of a bean, containing two or three peas of a mouſe-colour, including each a kernel; theſe peas being the ſeeds by which the plant is propagated.

The tree is of various heights from 1 foot to 100; and there are ſome which two men cannot fathom, while others ſcarce exceed the feebleſt ſhrub in a garden. The beſt time to gather the leaves of tea, is while they are ſmall,

ſmall, young, and juicy; when gathered, they are paſſed over the ſmoak of boiling water, to moiſten them; then they are laid on copper-plates, which are heated; and thus the leaves drying, they are curled up in the manner they are brought to Europe; though it is very rare to find the tea perfectly pure, the Chineſe always mixing other herbs with it, to increaſe the quantity. Indeed the price it is ſold at among them is reaſonable enough; being uſually about 3 d. ſterling a pound, and never more than 9 d. The Chineſe know nothing of imperial tea, flower of tea, and many other names, which are uſed in Europe to diſtinguiſh the goodneſs, and the price of this faſhionable commodity; and yet, beſide the common tea, they diſtinguiſh two other kinds, the voui and the ſoumlo, which are reſerved for people of the firſt quality, and thoſe who are indiſpoſed.

There are two general ſorts of tea in Europe:

Green TEA, being the common tea of the countries where it grows, which F. le Compte calls bing-tree, and ſays it is gathered from the plant in April. This is held a very good digeſtive, and a little corroſive; giving a pale greeniſh tincture to water, and its leaves are much twiſted.

The ſecond is,

Bohea TEA, which is the voui tea, or bou tea of the Chineſe. F. le Compte makes this only to differ from the green tea, by its being gathered in March, a month before it, and while in the bud; hence the ſmallneſs of the leaves, as well as the depth of the tincture it gives the water. Others take it for the tea of ſome particular province; the ſoil being found to make an alteration in the properties of it, as much as the ſeaſon of gathering. There is alſo a red tea, called honan tcha, which tinges the water of a pale red, and is ſaid to be extremely digeſtive; by means whereof the Tartars are ſaid to be able to feed on raw fleſh. It has an earthy taſte, and much the leaſt agreeable of them all; but ſcarce known in England.

Tea is to be choſen green, of the briskeſt ſmell, as whole as poſſible, and the greateſt care taken that it has not been expoſed to the air to pall and evaporate. The drink tea is made in China, and throughout the greateſt part of the Eaſt, after the ſame maner as in Europe, by infuſing the leaves in boiling water, and drinking the infuſion hot. Indeed, with us, it is uſual to temper its bitterneſs with ſugar, of which the orientals uſe little or none. However, the Japaneſe are ſaid to prepare their liquor ſomewhat different, by pulveriſing it, and ſtirring the powder in hot water, drinking it as Europeans do coffee. The Chineſe are always making tea, eſpecially at meals, which is the chief treat wherewith they regale their friends. The moſt moderate take it at leaſt three times a day, others ten times, or more; and yet it is computed the conſumption of tea among the Engliſh and Dutch is as great in proportion as among the Orientals; though, in France, the uſe of tea is much declined, and coffee is now become the prevailing liquor.

The properties of tea are ſtrangely controverted, and the eaſtern nations are altogether as much poſſeſſed with them as the Europeans; but it is perhaps becauſe imagination bears as great a ſway there as here. The reaſon why the gout and ſtone are unknown in China, is aſcribed to the uſe of this plant; which is ſaid further to cure indigeſtions of the ſtomach, to carry off a debauch, and to give new ſtrength for drinking; as alſo to diſpel wind, and cure the vapours.

Sim. Pauli, phyſician to the King of Denmark, in an expreſs treatiſe on this plant, endeavours to ſhew, that theſe virtues aſcribed to it in the Eaſt are local, and hold not with the inhabitants of Europe. According to him, thoſe paſt their fortieth year ſhould never uſe it, as being too deſiccative; that tea has no other virtues but thoſe of betony; and adds, with Bauhin, that it is only a ſpecies of myrtle, found in Europe as well as the Indies. But this opinion is refuted by Pechlin, in a treatiſe of tea; where he maintains, that it is good to prevent ſcorbutic diſeaſes, and that its gentle aſtringent virtues ſtrengthen the tonic motions of the inteſtines; but he blames the drinking it with milk, and eſpecially after a full meal, or after much wine.

By an act of the 11th of George I. tea may not be imported but from the place of its growth, though formerly exported from hence, or upon any other pretence, upon forfeiture thereof.

By the 12th of George I. tea ſeized, which cannot be ſold at a public ſale for 5 s. *per* pound, may be burnt, or otherwiſe deſtroyed; and the ſeizer rewarded as the commiſſioners ſhall think fit, not exceeding 18 d. *per* pound.

By the 14th of George II. any dealers in tea, who ſhall dye, fabricate, or manufacture any ſloe-leaves, liquorice-leaves, or leaves of tea that have been uſed, or of any other tree, ſhrub, or plant, in imitation of tea, or ſhall mix or dye ſuch leaves with Terra Japanica, ſugar, meloſſes, clay, logwood, or any other ingredients or materials, or ſhall ſell, or expoſe to ſale, or have in their poſſeſſion any ſuch leaves, are to forfeit 10 l. for every pound weight.

The ſmuggling of tea being a great detriment to the public revenue, an act of parliament was paſſed in 1745 for reducing this duty to one-half what it was before, which brought a great increaſe to the revenue: for, before this period, the tea-revenue had been gradually ſinking from 200,000 l. a year to about 140,000 l.; which laſt ſum aroſe from about 600,000 lb. weight only of tea, being all that then paid duty: but, ſince the act, the ſtate of the revenue ſtands thus:

	lb. of tea.	Exciſe.	Cuſtom.	
1746,	1,900,000	200,000	28,000	
1747,	2,000,000	210,000	28,000	
1748,	2,600,000	280,000	50,000	—Here commenced the 5 *per cent.* on dry goods.
1749,	2,700,000	280,000	50,000	
1750,	2,700,000	280,000	50,000	
1751,	2,800,000	310,000	58,000	
1752,	3,000,000	315,000	58,000	
1753,	3,200,000	325,000	58,000	
In 8 years	20,900,000	2,200,000	380,000	
		380,000		

L. 2,580,000 total exciſe and cuſtom.

So that deducting 1,120,000 l. from this total for eight years, at 140,000 l. *per annum*, the revenue has benefited by this act 1,460,000 l. in eight years, excepting only the 5 *per cent.* on dry goods, which took place in 1747.

TEAZEL, or *Fullers thiſtle*. A plant uſed by the fullers, cloth-workers, and ſtocking-weavers. See *Fuller*.

TECCALIS. A weight uſed in the kingdom of Pegu, where 100 teccalis make about 40 ounces avoirdupois.

TEES. A river which riſes on the confines of Cumberland; and running eaſtward, divides the county of Durham from Yorkſhire, falling into the German ſea below Stockton.

TAGAPATAN. A port-town of the Hither India, in Aſia, lying in 76 deg. of E. lon. and 8 deg. of N. lat. near Comorin, the moſt ſouthern promontory of that peninſula, 80 miles ſouth of Cochin, and 160 miles N.W. of Columbo in Ceylon, where the Dutch have a factory.

TEIRCE. The third part of a pipe of wine, containing 42 gallons.

TELA. A kind of coin, or rather a gold medal, ſtruck at the coronation of every Perſian King, and diſtributed among the people; being of the ſame weight with the German gold ducats; but of no currency in commerce, and worth more or leſs, purſuant to their ſcarcity, or the deſire of perſons for them; though there are alſo telas ſtruck in the beginning of every new year.

TELARSKI-*Bielki*. A ſort of very white fur brought from Siberia, and ſome other Ruſſian territories, of an extraordinary ſize; being much eſteemed by the Muſcovites, who reſerve them almoſt all for the warehouſes, and uſe of their ſovereign: however, ſeveral of this ſort paſs into China.

TELESCOPE. An optical inſtrument, conſiſting of ſeveral glaſſes, or lenſes, fitted into a tube; through which remote

remote objects are ſeen as if nigh at hand. In teleſcopes, the lens, or glaſs, turned towards the object, is called the object-glaſs, and that next the eye the eye-glaſs; though, if the teleſcope conſiſts of more than two lenſes, all but that next the object, are called eye-glaſſes. The invention of the teleſcope is one of the nobleſt and moſt uſeful theſe ages have to boaſt of; by means whereof the wonders of the heavens are diſcovered to us, and aſtronomy brought to a degree of perfection, of which former ages could have no notion.

The diſcovery is rather owing to chance than to thought; ſo that we are rather indebted to the good fortune of the diſcoverer, than to his ſkill or ability: on which account it concerns us the leſs to know who it was firſt diſcovered this admirable invention. It is certain it muſt be caſual, ſeeing the theory it depends upon was not then known. However, none of the firſt artificers made teleſcopes above a foot and a half; it being Marius in Germany, and Galileo in Italy, who firſt made long ones, fit for celeſtial obſervations.

Teleſcopes are of various kinds, diſtinguiſhed by the number of their lenſes or glaſſes, and denominated from their particular uſes; as the terreſtrial or land teleſcope, the celeſtial or aſtronomical teleſcope; to which may be added, the Galilean or Dutch teleſcope, the reflecting teleſcope, and the aerial teleſcope. Galileos', or the Dutch teleſcope, conſiſts of a convex object-glaſs, and a concave eye-glaſs; which, of all others, is the moſt ancient form, being the only kind made by the inventors Galileo and Huygens.

Aſtronomical teleſcope, conſiſts of an object-glaſs and eye-glaſs, both convex; and has its name from being wholly uſed in aſtronomical obſervations.

Land-teleſcope, or *day-teleſcope*, of more than two lenſes, commonly of a convex object-glaſs, and three convex eye-glaſſes; or a teleſcope that exhibits objects, yet different from that of Galileo; which has its name from being uſed to view objects in the day-time, on or about the earth.

The *reflecting teleſcope*, inſtead of lenſes, conſiſts chiefly of mirrors, and exhibits remote objects by reflection inſtead of refraction; which inſtrument is the invention of the great Sir Iſaac Newton.

Aerial teleſcope, is a kind of aſtronomical inſtrument, the lenſes whereof are uſed without a tube. However, in ſtrictneſs, this is rather a particular manner of mounting long teleſcopes for celeſtial obſervations in the night-time, whereby the trouble of long unwieldy tubes is ſaved, than any particular kind of teleſcope, contrived by the great Huygens.

Teleſcopial ſtars, are ſuch as are not viſible by the naked eye, but diſcoverable only by the help of a teleſcope; all ſtars leſs than the 6th magnitude being teleſcopic to a middling eye.

TELLE. See *Tael*.

TELLER. An officer in the exchequer; of which there are four; whoſe buſineſs is to receive all monies due to the crown, and thereupon to throw down a bill through a pipe into the tally-court, where it is received by the auditor's clerks, who attend there to write the words of the ſaid bill on a tally, and then deliver it to be entered by the clerk of the pells, or his clerk. See *Exchequer*, and *Tally*.

The tally is then ſplit or cloven by the two deputy-chamberlains, who have their ſeals; whilſt the ſenior deputy reads the one part, and the junior examines the other with the other two clerks.

The tellers places are in the King's gift; and they have, beſides their chief clerks, or deputy, four other clerks, for the diſpatch of buſineſs.

TELLICHERRY. A port-town on the Malabar coaſt, in the Hither India, ſituated in 75 deg. of E. lon. and 12 deg. of N. lat. 30 miles north of Calicut; having an Engliſh factory, ſubject to Bombay.

TELLONG. A weight uſed at Anjengo, on the Malabar coaſt, in India; being 16 lb. avoirdupois.

TEMAN. A liquid meaſure uſed at Mocha in Arabia: 32 memeedas make the teeman, and each memeeda is 3 Engliſh pints.

TEMIN. A term in the Levant for the French pieces of 5 ſols; which, at the requeſt of the French ambaſſador, were cried down at Conſtantinople, upon account of their adulteration by other Europeans.

TEMPERING, in the mechanic arts. The preparing of ſteel and iron ſo as to render them more compact, hard, and firm, or even more ſoft and pliant, according to the reſpective occaſions. See *Iron*, and *Steel*.

Theſe metals are tempered by plunging them, while red hot, in ſome liquor prepared for the purpoſe; ſometimes pure water is uſed for that purpoſe; and, in effect, lockſmiths and blackſmiths ſcarce ever uſe any other: ſometimes a compoſition of various juices or liquors is uſed, which differs according to the manner and experience of the workman; ſuch as vinegar, mouſe-ear water, nettle, or Spaniſh raddiſh water, the water oozing from broken glaſſes, ſoot, ſalt, oil, diſtilled wine, and ſal armoniac. To harden and temper Engliſh, Flemiſh, and Swediſh ſteel, you muſt give them a pretty high heat; then ſuddenly quench them in water to make them hard; but Spaniſh and Venice ſteel requires only a blood-red heat before it is quenched.

If the ſteel is brittle, or too hard for an edge-tool, let it down by rubbing a piece of grindſtone or whetſtone hard upon the rock, to take off the ſcurf; then brighten, or heat it in the fire; and, as it grows hotter, you will ſee the colour change by degrees, coming firſt to a ſtraw, or light goldiſh colour, then to a darker goldiſh colour, and at laſt to a blue colour. The light gold colour is for files, cold chiſſels, and punches, to cut or punch iron and ſteel; the dark gold colour for punches to uſe on braſs, copper, or the like; and the blue colour gives the temper for ſprings.

TENBY. A port-town of Pembrokeſhire, ſituated in 4 deg. 45 min. of W. lon. and 51 deg. 40 min. of N. lat. on the Briſtol channel, 8 miles eaſt of Pembroke.

TENDER, in a legal ſenſe, ſignifies as much as to offer, or endeavour the performance of any thing, in order to ſave the penalty or forfeiture incurred by non-performance. Thus, to tender rent, is to offer it at the time and place where and when it ought to be paid; which will ſave the condition for that time, though the landlord refuſe to accept it.

TENDER, in the ſea-language, is a veſſel attending on ſome other larger and more conſiderable ones. See *Boat*.

TENEDOS. One of the ſmalleſt iſlands of the Turkiſh Archipelago, ſituated in 27 deg. of E. lon. and 39 deg. 30 min. of N. lat. near the coaſt of the Leſſer Aſia, a little weſt of the ruins of Troy.

TENERIF. One of the largeſt of the Canary iſlands, ſituated in 17 deg. of W. and 28 deg. of N. lat. in the Atlantic ocean, 350 miles weſt of Morocco in Africa. See *Canary* iſlands.

TENT, among vintners. A ſort of rich red Spaniſh wine.

TENTER. A machine uſed in the cloth-manufactory, to ſtretch out the pieces of cloth and ſtuff, or only to make them even, and ſet them ſquare.

This machine is uſually about four feet and a half high, and for length exceeds that of the longeſt piece of cloth; conſiſting of ſeveral long ſquare pieces of wood, placed like thoſe which form the barriers of a manege, but ſo as the lower croſs-piece of wood may be raiſed or lowered, as is found requiſite, to be fixed at any height, by means of pins. Along the croſs-pieces, both the upper and under one, are hooked nails, called tenter-hooks, driven in from ſpace to ſpace.

TEPIS. A cotton and ſilk ſtuff manufactured in the Eaſt Indies; being from five to ſeven ells in length, and 2-3ds in breadth.

TERCERA. One of the largeſt of the Azores, or Weſtern iſlands, lying in 28 deg. of W. lon. and 39 deg. of N. lat. in the Atlantic ocean, almoſt in the mid-way between the continents of Europe and America. See *Azores*.

TERINDANNES. A muſlin, or fine cotton cloth, brought from the Eaſt Indies, particularly from Bengal; the pieces being 16 ells in length, and 3-4ths in breadth.

TERKI. A port-town of Circaſſia, in Aſia, ſituated in

52 deg. of E. lon. and 43 deg. 40 min. of N. lat. on a river of the ſame name, near the Caſpian ſea; being the frontier-town of the Ruſſians againſt Perſia, 100 miles north of Derbent, and 140 ſouth of Aſtracan.

TERNATE. The moſt northerly of the Molucca or Clove iſlands, in the Indian ſeas, in Aſia, ſituated in 125 deg. of E. lon. and 1 deg. 15 min. of N. lat. a little weſt of the iſland of Gilolo, and 100 miles eaſt of the iſland of Celebes, or Macaſſar; being in poſſeſſion of the Dutch. See *Moluccas*.

TERRA *a Terra*. Galleys, and other veſſels, are ſaid to go *terra a terra*, when they never go far from the coaſt.

TERRA DEL FOGO. An iſland of South America, bounded by the ſtraits of Magellan, on the north; by the Atlantic ocean, on the eaſt; and by the South ſea, on the ſouth and weſt; being of a triangular figure, the baſe whereof is the ſtrait of Magellan. It is 300 miles in length from eaſt to weſt, and about as much from north to ſouth, the point or ſummit of the pyramid lying in 80 deg. of W. lon. and 57 deg. 30 min. of S. lat. This is the moſt ſouthern cape or promontory of South America, about which all ſhips ſail at preſent into the Pacific ocean, inſtead of going through the ſtraits of Magellan, as the firſt diſcoverer did, who gave his name to that ſtrait. Terra del Fogo is a mountainous, woody country, the tops of the mountains being almoſt always covered with ſnow. There are ſome good harbours on the coaſt, where ſhips may lie ſecure from ſtorms, which theſe ſeas are very much ſubject to; but our mariners chuſe to keep at a diſtance from the land, in their paſſage round Cape Horn, that they may have ſea-room, rather than come near it. There are ſome few inhabitants on the iſland, as there are upon the continent on the north ſide of the ſtraits, who are repreſented as a brave hardy race, naturally of dark olive complexions; painting both their faces and bodies, and having no other cloathing but a mantle they make of the ſkins of animals, and a cap of feathers: they live in little huts, which they make with the boughs of trees, eating what they take in hunting and fiſhing. Their arms are bows and arrows, pointed with ſharp flints or bones; and their nets made of the ſinews of animals, or the fibres of the bark of ſome trees. Their country ſeems to have little in it to invite foreigners to ſettle among them; at leaſt the Europeans have thought fit, hitherto, to leave them to their natural liberty, as well as the natives of the oppoſite continent of Patagonia. See *Spaniſh* America.

TERRA FIRMA, in geography, is uſed for a continent, in contra-diſtinction to iſlands. See *Continent*.

TERRA FIRMA, is alſo a province of New Spain. See *Spaniſh* America.

TERRA MERITA, in Latin *Curcuma*, called alſo ſaffron of the Indies, Malabar, and Babylon, is a root which ſerves for dying yellow, being of that colour both within and without, and like ginger in figure and thickneſs; its leaves are broad, long, and green, with flowers like blades of corn.

It is brought from the Eaſt Indies, and the iſland of Madagaſcar; but it ſhould be choſen thick, new, reſinous, hard to be broken, heavy, and not worm-eaten.

TERRAQUEOUS. An epithet given to our globe or earth, conſidered as conſiſting of land and water, which together conſtitute one maſs.

Mr. Derham obſerves, that the diſtribution of land and water is admirable; the one being laid over the other ſo ſkilfully all the world over, that there is a juſt equipoiſe or balance of the whole globe. Thus the northern balances the ſouthern; and the American continent is a counterpoiſe to the Eurepean, African, and Aſiatic. See *Ocean*.

TERRA SAPONARIA, is the Latin name for a kind of glazed earth, which may ſerve inſtead of ſoap for the ſcowering of wool.

TERRA SIGILLATA, called alſo *Lemnian earth*. See Terra *Sigillata*.

TERRIS *et catallis tentis ultra debitum levatum*. A writ judicial, for the reſtoring lands or goods to a debtor, who is diſtrained beyond the quantity of the debt.

TERVERE. A port-town of the United Netherlands,

in the province of Zealand, ſituated in 3 deg. 35 min. of E. lon. and 51 deg. 38 min. of N. lat. on the N. E. coaſt of the iſland of Walcheren, 4 miles N. E. of Middleburg, once ſubject to the Prince of Orange; but the ſtates have lately deprived him of it.

TESCARET, or *Theskere*, is a term in the Levant port-towns, particularly at Smyrna, for a certificate given by the cuſtomhouſe-officers, when the duties of entry have been paid for merchandiſe; by virtue of which certificate they are to paſs free throughout the extent of the farm, or diſtrict, where they have paid; for in other ports, as in Cairo, they are to pay new duty.

TEST, among chemiſts and refiners. The ſame with cupel, or coppel, an inſtrument uſed in the purifying of gold and ſilver.

TESTACEOUS, in natural hiſtory. An epithet given to a ſpecies of fiſh, which are covered with a ſtrong thick ſhell, as tortoiſes, oyſters, and pearl-fiſh. See *Fiſh*. In ſtrictneſs, however, teſtaceous is only applied to fiſh whoſe ſtrong and thick ſhells are entire, and of a piece; thoſe which are ſoft, thin, and conſiſt of ſeveral pieces jointed, as the lobſter, being called *cruſtaceous*.

But, in medicine, all preparations of ſhells, and ſubſtances of the like kind, are called teſtaceous powders; ſuch are powders of crabs eyes and claws, hartſhorn, and pearl. Dr. Quincy, and others, ſuppoſe the virtue of all teſtaceous powders to be alike; that they ſeldom or never enter the lacteals; but that the chief of their action is in the firſt paſſages; in which caſe they are of great uſe in abſorbing acidities. Hence they become of uſe in fevers, and eſpecially in rectifying the many diſtempers in children, which generally owe their origin to ſuch acidites.

TESTICACO. A great lake of Peru in America, more than 200 miles in circumference, ſituated in the province of Callao; the towns ſituated on this lake being eſteemed the moſt delightful abodes in South America.

TESTOON. A ſilver coin of Italy: the teſtoon of Venice is 648 pichilis, or 1 s. $5\frac{163}{184}$ d. ſterling; that of Naples is 120 quatrins, or 1 s. 4 d. ſterling; that of Rome is 96 quatrins, or 1 s. 6 d. ſterling; that of Bologna is 180 quatrins, or 1 s. 6 d. ſterling; and that of Genoa is 360 deniers, or 1 s. $3\frac{1}{5}$ d. ſterling.

But the teſtoon is alſo a ſilver coin of Portugal, being 100 rees, or $6\frac{3}{4}$ d. ſterling; and 48 teſtoons make the moidore, or 1 l. 7 s. ſterling.

TETUAN. A town of the empire of Morocco in Africa, ſituated in 6 deg. 35 min. of W. lon. and 35 deg. 40 min. of N. lat. about 60 miles S. E. of Tangier, 8 miles from the bay of Tetuan, juſt within the ſtraits of Gibraltar. See *Morocco*.

TEUTONIC. Something belonging to the Teutones, an ancient people of Germany, inhabiting chiefly along the coaſts of the German ocean.

TEUTONIC *language*, is the ancient language of Germany, which is ranked among the mother-tongues, and now called the German or High Dutch; being diſtinguiſhed into Upper and Lower. The Upper has two notable dialects: 1. The Scandian, Daniſh, or perhaps Gothic; to which belong the languages ſpoke in Denmark, Sweden, Norway, and Iceland: 2. The Saxon; to which belong the ſeveral languages of the Engliſh, Scotch, Friſian, and thoſe on the north of the Elbe. To the Lower belong the Low Dutch and Flemiſh, ſpoke through the Netherlands.

TEUTONIC *order*. A military religious order of knights eſtabliſhed towards the cloſe of the 12th century, and thus called becauſe conſiſting principally of Germans or Teutons.

This order was maſter of all Pruſſia, and built the cities of Elbing, Marienbourg, Thorn, Dantzick, Koningſberg, and ſome others. As the order grew in power, the knights took more ſtate on them; and at length, inſtead of friars, brothers, as at firſt, would be called knights. Though the grand maſter, Conrade Zolnera of Rotenſteine, oppoſed this innovation, his ſucceſſor Conrade Wallerod not only approved it, but procured himſelf to be treated with honours only rendered to the greateſt princes. Diviſions being got into the order, the Kings

of Poland made their advantage of them; for the Pruſſians revolted; and, after ſeveral wars between the knights and the Poles, the former yielded to King Caſimire the Upper Pruſſia, and did homage to him for the Lower. Laſtly, at the time of the reformation, Albert Marquis of Brandenburgh, then grand maſter, becoming a Lutheran, renounced the dignity of grand maſter, diſſolved the commanderies, and drove the knights out of Pruſſia: moſt of the knights followed his example, and embraced the reformation; the reſt transferring the ſeat of their order to Margentheim, or Marendal, in Franconia, which they ſtill retain. They there elected Walter of Cromberg their grand maſter, formed a proceſs againſt Albert, and the Emperor put him to the ban of the empire. The order, however, could never recover their domains; but are now little more than the ſhadow of what they formerly were, having only three or four commanderies, ſcarce ſufficient for the ordinary ſubſiſtence of the grand maſter and the knights.

TEXEL. An iſland of Holland, ſituated in 4 deg. 25 min. of E. lon. and 53 deg. 12 min. of N. lat. at the entrance of the Zuyder ſea, parted from the continent of Holland by a narrow channel, through which moſt ſhips bound for Amſterdam paſs. See *United* Provinces.

TEXTURE, properly denotes the arrangement and coheſion of ſeveral ſlender bodies or threads interwoven, or entangled among each other, as in cloths, ſtuffs, and the webs of ſpiders.

THAMALAPATRA, called ſometimes *Malabatrum*, is the leaf of a tree, which grows in the Eaſt Indies, and enters the compoſition of the theriaca.

THAMES. A great navigable river of England, compoſed chiefly of the rivers Iſis and Thame; of which the Iſis is much the larger, and runs the longer courſe, riſing on the confines of Glouceſterſhire, a little ſouth-weſt of Cirenceſter, and at Lechlade becomes navigable; from whence it continues its courſe north-eaſt to Oxford, where it receives the Charwell; from Oxford it runs ſouth-eaſt to Abington, and thence to Dorcheſter, where it receives the Thame, and continues its courſe ſouth-eaſt by Wallingford to Reading; after which it viſits Marlow and Windſor, and from thence runs eaſt by Brentford and Richmond to London; continuing the ſame courſe to the ſea, and receiving the river Medway near the mouth of it. The Thame is but a ſmall river, which, riſing near Tring in Hertfordſhire, croſſes the county of Bucks, and falls into the Iſis at Dorcheſter, before which it is a ſmall unnavigable ſtream.

THANET. A little iſland of Eaſt Kent, formed by the branches of the river Stour and the ſea.

THAPSIE. A plant of an extraordinary acrimonious nature, which only enters violent remedies; and is of two ſorts, white and black. The white has leaves like fennel, with yellow flowers, and a broad ſeed: it is alſo called grey turbit; and fraudulent apothecaries ſubſtitute it in the place of the real turbit. The black is different only in colour from the white. See *Turbit*.

THELONIUM, ſignifies toll. See *Toll*.

Breve eſſendi quieti de thelonio, is a writ lying for the citizens of a city, or burgeſſes of a town, that have a charter or preſcription to free them from toll, againſt the officers of any town or market, who would conſtrain them to pay it, contrary to the grant or preſcription.

THERIACA, in medicine. A name given by the ancients to various compoſitions, eſteemed good againſt poiſons; but now chiefly reſtrained to what, by way of diſtinction, is called theriaca andromachi, or Venice treacle; which is a compound of no leſs than 64 drugs, prepared, pulverized, and reduced, by means of honey, into a liquid electuary; the baſis, or foundation of the compoſition, being viper's fleſh. M. Charas has wrote a particular hiſtory of the animals, plants, and minerals, entering the compoſition of this remedy, which is found ſovereign againſt the bites of venomous beaſts, and in the wind-colic; being alſo uſed in intermitting fevers, and in caſes requiring perſpiratives and diaphoretics; alſo in continual fevers, eſpecially ſuch as are malignant, and where the pulſe is low and ticking; in the ſmall pox, and meaſles: and, as moſt of the ingredients thereof are very hot, it is proper to be given in diſeaſes, where the natural heat is weak and languid. Andromachus, Nero's phyſician, paſſes for the inventor of theriaca; at leaſt it was he who gave the firſt deſcription thereof in elegiac verſes; his ſon did the ſame in proſe, and Democrates in iambic. Anciently the treacle made at Venice had all the reputation; and many people ſtill retain the ancient prejudice: but it is now prepared at Montpelier, Paris, and London, with as much advantage as at Venice.

There is another vulgar kind of theriaca, called *diateſſaron*; becauſe only conſiſting of four ingredients.

Treacle-water, and treacle-vinegar, are found good preſervatives againſt putrid air, whether by being only ſmelt, or rubbing the wriſts, temples, and noſe therewith.

THERMOMETER. An inſtrument ſhewing, or rather meaſuring, the increaſe and decreaſe of the heat and cold of the air.

THERMOSCOPE. An inſtrument ſhewing the changes happening in the air, with reſpect to heat and cold.

THIMELA. A plant, whoſe root is ranked among the number of medicinal drugs.

The leaves of the thimela are green, thick, and glutinous, not unlike thoſe of the olive-tree; and it produces a fruit of the bigneſs of a grain of pepper, which is green at firſt, and of a beautiful red when ripe. Its root is light, and fibrous, reddiſh on the outſide, and white within; of an agreeable taſte when firſt put into the mouth, but cauſtic, and exceeding hot, when it remains there for ſome time. It is uſed in France for purging the head, and drawing off defluxions from the eyes; but the beſt ſort is that of Languedoc.

THISTLE. A name common to ſeveral plants; whoſe flowers conſiſt of ſeveral little, longiſh, narrow leaves, ranged cloſe together in a ſort of head; and whoſe proper leaves are uſually ſquammoſe and prickly; but the moſt known of theſe plants is the bleſſed thiſtle. See *Fuller*.

THLAPSI. A plant, which grows in the ſouthern provinces of France; being of two ſorts; one riſing about a foot in height, whoſe leaves are of a deep blue; the flowers white, and the ſeed yellow, bordering upon red: the other has not ſo high a ſtalk; but, in all other reſpects, is like the firſt, except that its ſeed is entirely yellow.

The ſeed of the thlapſi of the firſt kind, which ſhould be choſen new, clean, reddiſh, ſharp, and poignant, is proper for medicine; for, when pulveriſed, and taken faſting, it is reputed ſovereign for diſſolving the ſtone in the bladder, curing the gout, and expelling coagulated blood in the breaſt or ſtomach.

THOMAS, *St.* An iſland in the Atlantic ocean, ſituated under the equator, in 8 deg. of E. lon. 240 miles N.W. of the city of Loango in Africa; and, with four other adjacent iſlands, is ſubject to the King of Portugal; all of which furniſh ſhipping with water and proviſions as they paſs by; but are not conſiderable on any other account. The iſland of St. Thomas, which the negroes of the coaſt of Africa call *Poncas*, took its name from the diſcovery the Portugueſe made of it, towards the middle of the 16th century, on St. Thomas's day.

The ſituation of St. Thomas, though under the line, appeared ſo commodious to the Dutch for the commerce of Angola, and the other neighbouring coaſts, that they twice made themſelves maſters of it, firſt in 1610, and next in 1641; but they could not maintain themſelves there, and were obliged to abandon it to the Portugueſe, after laying the iſland deſolate with fire and ſword. The Portugueſe were the firſt who inhabited and cultivated St. Thomas; but at preſent the negroes exceed them in number, and could eaſily poſſeſs themſelves of the iſland, had not their natural cowardice, and habitude to ſlavery, rendered them incapable of ſuch an enterprize.

Sugar canes and ginger grow there as well as in any other part of the world, and make the principal object of the interior commerce of the iſland; for the harveſt of both, notwithſtanding the great heats, never fail once a month. There are 45 or 50 ſugar-mills, which have each their month for working; and, from all the iſlands, are ex-

ported yearly for Portugal, about a hundred thouſand arobes of ſugar, each arobe weighing 32 lb. avoirdupois.

The other merchandiſe of the growth or manufacture of the iſland are ſeveral cotton ſtuffs fit for the negro-coaſt trade; fruits, particularly that called cola, which is a kind of nut reſembling the taſte of a cheſnut, and bartered with great profit in the kingdoms of Angola and Congo.

The European merchandiſe brought by the Portugueſe to St. Thomas, are Dutch and Rouen linens, threads of all colours, ſerges, ſilk ſtockings, Leyden camblets, Niſmes ſerges, hatchets, and other iron utenſils, ſalt, oil of olives, copper veſſels, pitch, and tar, cordage, ſugar-mills, brandy, all ſorts of diſtilled liquors, Canary wine, olives, capers, flour, butter, and cheeſe.

Beſides the great iſland, ſome pilots give the general name of *the iſlands of St. Thomas*, to ſeveral other iſlands, which are very near, and even others at a good diſtance. Of theſe iſlands, the principal are Prince's iſland, Fernando-Po, Aſcenſion, Anaboa or Anabon, and even St. Helen, though at a conſiderable diſtance.

As to the four firſt, they have little trade; and the ſhips, on their way to the Eaſt Indies, put in there only for water and wood, or the fiſhing of turtle, when they want proviſions, or have a great many ſick aboard; though Anaboa may be excepted, where the Portugueſe eſtabliſhed a trade in the cotton, which they gather there in abundance; as alſo in hogs, veniſon, fowls, and ſeveral excellent fruits, as oranges, lemons, citrons, figs, cocos, and ananas; to which may be added, millet, and Turky corn.

St. THOMAS, is alſo a city of India, on the coaſt of Coromandel, 3 miles ſouth of Fort St. George, ſituated in 80 deg. of E. lon. and 13 deg. of N. lat. ſubject to Portugal.

St. THOMAS. See *Daniſh* America.

THORA. A plant, which grows on the higheſt mountains, and is a kind of aconite, whoſe poiſon is very dangerous. Its leaves are long, firm, and indented, ſupported by very ſlender ſtalks; and its flowers are of a yellow colour, compoſed only of four leaves.

Nature has prepared for it a counterpoiſon in another kind of aconite, called, upon account of its ſpecific property, anthora; whoſe root has two ſhort diviſions, very bitter, white within, brown without, and fibrous. Its ſtalk riſes about two feet in height, its leaves reſemble the claws of a lark, and its flowers a head covered with a helmet; its ſeeds being blackiſh, and wrinkled, incloſed within membranous pods.

The anthora, beſides its ſpecific virtue againſt thora, is reputed ſovereign againſt the biting of mad dogs, and the colic.

THORNEY *iſland*, is an iſland ſituated in a bay of the Eaſt channel, between Chicheſter and Portſmouth.

THOULON, or *Toulon*. A port-town of Provence in France, ſituated in 6 deg. of E. lon. and 43 deg. 5 min. of N. lat. on a bay of the Mediterranean ſea, 400 miles S. E. of Paris, 25 miles S. E. of Marſeilles, and 80 miles S. W. of Nice. This is the moſt ſecure and capacious harbour of any port in France, where the largeſt ſhips of the royal navy are built and ſtationed: there are vaſt magazines of all manner of naval ſtores, and timber for ſhipping, with fine docks and yards for the fitting out and furniſhing ſhips of war. See *France*.

THOULOSE, or *Touloſe*. A city of France, capital of the province of Languedoc, lying in 1 deg. 5 min. of E. lon. and 43 deg. 30 min. of N. lat. on the river Garonne, 90 miles W. of the Mediterranean, 60 N. of the Pyrenees, and 300 S. of Paris. See *France*.

THREAD. Small twine, of flax, wool, or ſilk, ſpun or twiſted together, for making cloth and ſtuffs, and for ſewing things together. See *Gold* and *Silver* thread, *Flax*, and *Hemp*.

THRYLING. A ſmall money, uſed at Hamburgh, 48 of which make the ſchilling Lubs, or $1\frac{1}{8}$ d. ſterling; and 1536 make the dollar, or 3 s. ſterling.

THYME. A ſmall odoriferous herb, too well known to require a deſcription; but a very agreeable oil is extracted from its leaves and flowers.

TIBER. A great river of Italy, which runs from north to ſouth through the Pope's territories, paſſing by Perugia and Orvietto; and having viſited Rome, falls into the Tuſcan ſea at Oſtia, 15 miles below the city.

TIBIR. A name given to gold-duſt in ſeveral parts of the coaſts of Africa.

TIBOSE. One of the rupees current in the Mogul's territories, worth the double of the rupee Gaſana, which makes about 1 s. 3 d. ſterling.

TICAL. A ſilver coin, ſtruck and current in the kingdom of Siam, weighing 3 drams 23 grains, and worth about 1 s. 4 d. ſterling.

The tical is alſo a weight uſed in the ſame kingdom, weighing exactly as much as the tical coin; but the Siameſe call it baat, the word tical being Chineſe.

TICKET. A note, piece of coin, metal, or the like, ſo made as not to be eaſily counterfeited; by which a perſon is admitted to ſee a comedy, tragedy, ball, opera, or the like; alſo to receive money for ſervice done on ſhipboard: alſo a label to put on goods, and bags of money, to know the value, quantity, or ſort: likewiſe a piece of ſtamped ſilver, worn by the licenſed porters in the city of London, that, if they ſhould go away with any parcel of money, goods, or parcels, with which they are entruſted, upon application to their proper office, their ſureties ſhall be obliged to make good the damage, ſo that it does not exceed 300 l. See *Porter*.

TIDE, or *Tides*. Two periodical motions of the waters of the ſea, called alſo the flux and reflux, or ebb and flow. See *Flux*.

When the motion of the water is againſt the wind, it is called a windward tide; when wind and tide go the ſame way, leeward tide; and when it runs very ſtrong, it is called a tide-gate.

To tide over, or up into any place, is to go in with the tide, either ebb or flood, as long as it laſts; then to ſtay at anchor all the time of the contrary tide, and thus to ſet in again with the return of the next tide. It is ſaid to flow tide and half-tide, when the tide runs three hours in the offing longer than it does by the ſhore; but by longer, they do not mean more hours, only, that if it is high water aſhore at 12, it will not be ſo in the offing till 3. If it ebb and flow longer, they ſay it runs half-tide and half-quarter. When the moon is in the firſt and third quarter, that is, when ſhe is new and full, the tides are high and ſwift, and called ſpring-tides; when ſhe is in the ſecond and laſt quarter, the tides are lower and ſlower, and called neap-tides.

A table, ſhewing, by the moon's age, the time of high water at ſome of the principal ports in Great Britain.

The moon's age.		*London, Tinmouth, Whitby.*		*Birlington Bay.*		*Scarbor. 2. Tide, Severn.*		*Newcaſtle, Falmouth, Dartm.*

Phenomena of the TIDES. The ſea is obſerved to flow, for certain hours, from ſouth towards north; in which motion or flux, laſting about ſix hours, the ſea gradually ſwells; ſo that entering the mouths or rivers, it drives back the river-waters towards their heads or ſprings.

After a continual flux of ſix hours, the ſea ſeems to reſt for about a quarter of an hour; when it begins to ebb or retire back again from north to ſouth for ſix hours more; in which time the water ſinks, and the rivers reſume their natural courſe. After a ſeeming pauſe of a quarter of an hour, the ſea again begins to flow as before, and thus alternately: ſo does the ſea ebb twice a day, and flow as often; but not in the ſame hours thereof. Now, 12 hours 50 minutes is a lunar day; that is, the moon paſſes the meridian of the earth later and later each day by 50 minutes. So that the ſea flows as often as the moon paſſes the meridian, both the arch above, and that below the horizon; and ebbs as often as ſhe paſſes the horizon, both the eaſtern and weſtern point thereof.

This further agreement is found between the moon and the ſea, that the tides, though conſtant, are not equal; but are greateſt, when the moon is in conjunction, or oppoſition to the ſun, and leaſt when in quadrature thereto. Laſtly, thoſe tides are the greateſt, which happen in the new and full moon, at the times of the equinoxes. The ſame things are obſerved throughout moſt of the coaſts of Europe; only the tides are ſo much the leſs, and happen the later, as the coaſts are more northerly. Theſe phenomena of the tides are admirably accounted for from the principle of gravitation. All required to their ſolution is, that the earth and moon, and every particle thereof, mutually gravitate towards each other.

The ingenious Kepler indeed, long ago, conjectured this to be the occaſion of tides: "If, ſays he, the earth "ceaſed to attract its waters towards itſelf, all the wa- "ter of the ocean would riſe and flow into the moon; "the ſphere of the moon's attraction extends to our "earth, and draws up the water." Thus thought Kepler, in his *Introd. ad Theor. Mart.*; and his ſurmiſe, for it was then no more, is now abundantly verified by Dr. Halley, from the Newtonian Principles.

In effect, there are two tides every day from the action of the ſun, as there are in the lunar day from that of the moon, all governed by the ſame laws; only thoſe cauſed by the ſun are much leſs than thoſe of the moon; becauſe though the ſun is ten thouſand times bigger than both the earth and the moon, yet he is at ſo immenſe a diſtance, that the earth's diameter bears no proportion thereto: hence the different tides depending on the particular actions of the ſun and moon are not diſtinguiſhed, but confounded. The lunar tide is ſomewhat changed by the action of the ſun; and this change varies every day, by reaſon of the inequality of the natural and lunar day.

Since the greateſt tides about the equinoxes ariſe from the ſun and moon being in the equinoctial, and thoſe about the ſolſtices from the ſun and moon being in the tropics; for this reaſon, thoſe greateſt tides about the equinoxes are greater than thoſe about the ſolſtices; ſince the greater the circle is, wherein the waters move, the greater is their agitation. And if the moon ſtood ſtill in the pole, the ſwelling would become immoveable about the pole, and the high water be fixed therein.

Since the tides are ſomewhat changed by the libration of the waters, which uſe to retain a motion impreſſed upon them for ſome time; for this reaſon the higheſt tides are not preciſely in the very conjunction and oppoſition of the moon, but two or three tides afterwards.

Since the greateſt of the two tides happening in every diurnal revolution of the moon, is that wherein the moon is neareſt the zenith, or nadir; for this reaſon, while the ſun is in the northern ſigns, the greater of the two diurnal tides in our climates, is that ariſing from the moon above the horizon; for when the ſun is in the ſouthern ſigns, the greateſt is that ariſing from the moon below the horizon.

Such would the tides regularly be, if the earth was covered with the ſea very deep; but, by reaſon of the ſhoalneſs of ſome places, and the narrowneſs of the ſtraits in others, by which the tides are propagated, there ariſes a great diverſity in the effect, not to be accounted for, without an exact knowledge of all the circumſtances of the places, ſuch as the poſition of the land, and the breadth and depth of the channels. For a very ſlow and imperceptible motion of the whole body of water, where, for example, it is two miles deep, will be ſufficient to raiſe its ſurface 10 or 12 feet in a tide's time; whereas, if the ſame quantity of water was to be conveyed through a channel of 40 fathoms deep, it would require a very great ſtream to effect it in ſo large inlets as are the channel of England, and the German ocean; whence the tide is found to ſet ſtrongeſt in thoſe places where the ſea grows narroweſt, the ſame quantity of water being in that caſe to paſs through a ſmaller paſſage. This is moſt evident in the ſtraits between Portland, and Cape la Hogue in Normandy, where the tide runs like a ſluice; and would be yet more between Dover and Calais, if the tide coming round the iſland did not check it. And this force being once impreſſed upon the water, continues to carry it above the level of the ordinary height in the ocean, particularly where the water meets a direct obſtacle, as it does in St. Maloes; and where it enters into a long channel, which running far into the land, grows very ſtrait at its extremity, as it does in the Severn ſea at Chepſtow and Briſtol.

This ſhoalneſs of the ſea, and the concurrent continents, are the reaſons that, in the open ocean, high water is not at the time of the moon's appulſe to the meridian; but always ſome hours after it, as is obſerved on all the weſtern coaſt of Europe and Africa, from Ireland to the Cape of Good Hope; in all which a ſouth-weſt moon makes high water; and the ſame is reported to hold in the weſt of America. It would be endleſs to recount all the particular ſolutions, which are eaſy corollaries from this doctrine; as, why the lakes and ſeas, ſuch as the Caſpian ſea, the Mediterranean ſea, the Black ſea, and the Baltic, have no ſenſible tides? for lakes, having no communication with the ocean, can neither increaſe nor diminiſh their water, whereby to riſe and fall; and ſeas that communicate by ſuch narrow inlets, and are of ſo great an extent, cannot, in a few hours time, receive and empty water enough to raiſe or ſink their ſurface any thing ſenſibly.

To demonſtrate the excellency of this doctrine, the example of the tides in the port of Tunking in China, which are ſo extraordinary, and different from all others, may ſuffice. In this port, there is but one flood and ebb in 24 hours; and twice in each month, when the moon is near the equinoctial, there is no tide at all, but the water is ſtagnant; yet, with the moon's declination, there begins a tide, which is greateſt when ſhe is in the tropical ſigns; only with this difference, that when the moon is to the northward of the equinoctial, it flows when ſhe is above the earth, and ebbs when ſhe is under, ſo as to make high water at moon-ſetting, and low water at moon-riſing: but, on the contrary, the moon being to the ſouthward, makes high water at riſing, and

low water at ſetting, ebbing all the while ſhe is above the horizon.

The cauſe of this odd appearance is ſuggeſted by Sir Iſaac Newton, to ariſe from the concurrence of two tides; the one propagated, in ſix hours, out of the great South ſea, along the coaſt of China; the other out of the Indian ſea, from between the iſlands, in 12 hours, along the coaſts of Malacca and Camboya. The one of theſe tides being produced in north latitude is, as has been ſaid, greater, when the moon being to the north of the equator, is above the earth, and leſs when ſhe is under the earth. The other of them, which is propagated by the Indian ſea, being raiſed in ſouth latitude, is greater when the moon declining to the ſouth is above the earth, and leſs when ſhe is under the earth. So that of theſe tides, alternately greater and leſſer, there comes always ſucceſſively two of the greater, and two of the leſſer together every day; the high water falling always between the arrival of the two greater floods, and the low water between the times of the arrival of the two leſſer floods: beſides, the moon coming to the equinoctial, and the alternate floods becoming equal, the tide ceaſes, and the water ſtagnates; but when ſhe has paſſed to the other ſide of the equator, thoſe floods, which in the former order were the leaſt, now becoming the greateſt, that which before was the time of the high water, now becomes low water, and the converſe. So that the whole appearance of theſe ſtrange tides is, without any forcing, naturally deduced from theſe principles, and is a great argument for the certainty of the whole theory.

TIDEWAITERS, or *Tidemen*. Certain officers belonging to the cuſtomhouſe, appointed to watch or attend on ſhips coming from abroad, to ſee that nothing is landed till the cuſtoms be paid. See *Cuſtom*.

They are thus called, becauſe they go aboard the ſhips at their arrival in the mouth of the Thames, or other rivers, and come up with the tide.

TIDOR. One of the Molucca or Clove iſlands, ſituated in 125 deg. of E. lon. and 1 deg. of N. lat. 100 miles E. of the iſland of Celebes. See *Molucca* iſlands.

TIERCE, or *Teirce*. A meaſure of liquid things, as cyder, wine, oil, or the like, containing the third part of a pipe, or 42 gallons. See *Meaſure*, and *Gallon*.

TIGER. A wild and fierce animal, whoſe eyes are brilliant, neck ſhort, teeth and nails very ſharp, and ſkin variegated with ſeveral ſpots.

Of all the eaſtern countries, they are moſt abundantly met with on the coaſt of Malabar in India; and they are of three ſorts, diſtinguiſhed by their ſize.

The ſmalleſt is like a large Spaniſh cat, whoſe cries are terrible, and like the bellowing of an ox.

The tiger of the ſecond kind is as large as a ſheep, or ſmall calf, and is the moſt common, very cruel, but not ſo much as the third kind, which is called the royal tiger, and is as big as a ſmall horſe.

The ſkins of all ſorts of tygers are much of the ſame colour; and their agreeable variety makes them of a conſiderable value.

TIGHT. The ſeamen ſay a ſhip is tight, when ſhe is ſo ſtaunch as to let in but little water; which is known by the ſmell of the water pumped out: for if ſhe lets in but little, it will always ſtink; if otherwiſe not.

TIGRIS. A river of Turky in Aſia, which riſes in the mountains of Armenia; and running ſouth, divides Diarbeck or Meſopotamia, from Curdeſtan, the ancient Aſſyria; it then paſſes by Bagdat, and joins the Euphrates in Eyraca Arabic, the ancient Chaldea; the united ſtream falling into the gulph of Perſia, below Baſſora, ſuppoſed to be the river which encompaſſed paradiſe.

TILE. See *Tyle*.

TILLER *of a ſhip*, is a ſtrong piece of wood, faſtened to the rudder, called alſo the *helm*. The name is chiefly given to that which ſerves for the helm in a boat, and which in a ſhip would be called the helm.

TILLING, in gardening and agriculture. A moving or ſtirring of the ground with the plough or ſpade; which being performed on the ſurface, enters to a certain depth, and makes the lower and upper parts change place; by which means the goodneſs of the earth is kept from being ſpent in feeding ill plants.

TIMBER, includes all kinds of felled and ſeaſoned woods, uſed in the ſeveral parts of building, as carpentery, joinery, and turnery.

The kinds of timber are numerous; but it is neceſſary to mention only ſome of the moſt uſeful and uſual.

1. The oak; the uſes whereof need no enumerating; for to endure all ſeaſons and weathers, there is no wood like it: hence its uſe in pales, ſhingles, poſts, rails, and boards. For water-works it is ſecond to none; and where it lies expoſed both to air and water, there is none equal to it: but its chief uſe is in ſhipbuilding.

2. Elm; this felled between November and February, is all ſpine or heart, and no ſap; but of ſingular uſe in places where it is always wet or dry: its toughneſs alſo makes it of uſe to the wheelwrights, and millwrights; nor muſt it muſt be omitted, that its not being liable to break and fly in chips, makes it fit for dreſſers and planks to chop on.

3. Aſh, whoſe uſe is almoſt univerſal; it is good for building, or other occaſions, where it may lie dry; it ſerves the carpenter, cooper, turner, wheelwright, plough-wright, and gardener; as alſo, at ſea, for oars, hand-ſpikes, and various other uſes.

4. Beech; its chief uſe is in turnery, joinery, upholſtery, and the like; as being of a clean, white, fine grain, not apt to bend nor ſlit; yet it is ſometimes, eſpecially of late, uſed for building-timber, and, if it lie conſtantly wet, is judged to outlaſt oak.

5. Fir, commonly known by the name of deal, and of late much uſed in building, eſpecially within doors, for ſtairs, floors, wainſcot, and moſt ſorts of ornament.

6. Walnut-tree, which is of univerſal uſe, except for the outſides of buildings: there is none better for joiners uſe, on account of its curious brown colour; for which it is preferred to beech, and is indeed leſs ſubject to worms.

7. Cheſnut-tree; which, next to oak, is the timber moſt ſought after by carpenters and joiners; being very laſting.

8. Service-tree, uſed in joinery, as being of a delicate grain, and fit for curioſities; yielding alſo beams of a conſiderable bigneſs for building.

9. Poplar, abele, and aſpen, all aquatics, differing very little from one another, are much uſed of late inſtead of fir; looking full as well, and being tougher and harder.

10. Alder, much uſed for ſewers, or pipes, to convey water; when always wet, it grows hard like a ſtone; but where ſometimes wet, and ſometimes dry, it rots preſently.

Felling of TIMBER. The ſeaſon uſually commences about the end of April, in regard the bark then riſes the more freely; ſo that where a quantity of timber is to be felled, the ſtatute requires it to be done then, for the advantage of tanning. See *Tanning*.

However, the opinions and practice of authors are very different as to the beſt ſeaſon for felling timber. Vitruvius recommends an autumnal fall, others adviſe December and January. Cato was of opinion, that trees ſhould have borne their fruit before felled, at leaſt their fruit ſhould be firſt ripe; which falls in with the ſentiments of Vitruvius.

In effect, though timber unbarked is the moſt obnoxious to worms, yet we find the wild oak, and many others, if felled too late, when the ſap begins to be proud, to be very ſubject to worms; whereas, about mid-winter, it is neither caſts, rifts, nor twines. It would be happy therefore, if a method of tanning without bark could be invented, that trees, being felled more early, the timber might be the better ſeaſoned.

The ancients had a great regard to the age of the moon in the felling their timber. Pliny orders it to be in the very article of the change; which happening on the laſt day of the winter-ſolſtice, the timber, ſays he, will be immortal.

TIMBER-*trees*. The wood of timber, before it be felled, particularly that of oak.

TIMBER-*meaſure*. Timber is uſually meaſured or eſtimated by the load or tun, which is a ſolid meaſure containing 40 feet of round timber, or 50 of hewn timber.

ber. The denomination of *load*, we ſuppoſe, ariſes hence, that 40 or 50 ſolid feet of ſuch timber weighs about a tun, that is, 20 hundred weight, which is uſually accounted a cart-load.

In meaſuring round timber for ſale, they uſually caſt away an inch out of the ſquare for bark, if oak; ſo that if a tree is 10 inches ſquare, they only account as if 9; but for aſh, elm, beech, and the like, an inch is too much.

TIMBER, or *Timmer of furs*, as ermins, martens, ſables, and the like, denotes 40 ſkins, or 20 couple; but of other ſkins ſix ſcore.

TIMMIN. A ſmall ſilver coin current in the iſland of Scio, and worth about 2 d. ſterling.

TIMOR. An iſland in the Indian ocean, in Aſia, ſituated between 122 and 126 deg. of E. lon. and between 8 and 10 deg. of S. lat. ſaid to have gold mines; in poſſeſſion of the Dutch, as are the reſt of the iſlands between this and Java. See *Celebes*.

TIN. A whitiſh metal, ſofter than ſilver, yet much harder than lead.

The chemiſts hold tin a ſpecies of imperfect metal, generated of two different ſeeds, that of ſilver, and that of lead; which renders it a kind of compound of both; accordingly, it is frequently found in both lead and ſilver mines.

Tin, however, has its proper mines; of which Cornwall and Devonſhire are an abundant evidence, the greateſt part of the tin conſumed in Europe being procured from thence; and Camden even ſuppoſes this abundance of tin in thoſe two counties to have given the original denomination of Britain to the whole country. In the Syriac language, *varatanac* ſignifies the land of tin; from which Bochart derives the name Britain.

The principal characters or properties of tin, enumerated by Boerhaave, are, that it is the lighteſt of all metals; very little ductile or elaſtic; the moſt fuſible and volatile of all metals; ſcarce diſſoluble by acids, unleſs the weaker ſorts; and eaſily and intimately miſcible with other metals, the ductility whereof becomes diminiſhed by ſuch mixture. The ſame author concludes, that ſulphur is a prevailing ingredient in tin, and deduces ſeveral of its particular properties therefrom. He adds, that, could the metal be perfectly purged of this heterogeneous ſulphur, it is probable it would be found no other than ſilver.

Several authors have before obſerved a great conformity, in many particulars, between the two metals; as, that both grow bitter when diſſolved by acids; that, when fuſed together, there is ſcarce any ſeparating them again, not even by lead. Beſides, Mr. Boyle, and others, give us ſeveral inſtances of ſilver being actually produced in conſiderable quantity from tin-ore.

Yet ſome naturaliſts judge the analogy greater between tin and lead, contending that tin is only lead under a leſs degree of coction; but if there are ſome marks of agreement between them, there are as many of diſagreement. The calx of tin, for inſtance, eaſily fuſes and vitrifies; but that of lead, not without the utmoſt difficulty. If tin and lead be mixed by a vehement fire, a vehement colluctation enſues, and they both run into a calx; to which may be added, that tin is eaſily vitrified, but lead with much labour.

The working of the tin-mines is very hard and difficult, not only by reaſon of the great depth to which the veins deſcend, even as low as 60 fathom; but alſo becauſe the rocks through which paſſages are frequently to be cut, are often ſo hard, that the workmen cannot dig a foot in a week. Nor is the ſoft ſhaking earth found in the tin-mines much leſs inconvenient to the workmen, both by reaſon of the fetid malignant vapours it exhales, and of the current of waters ſo frequently met with herein; all which inconveniencies render it impracticable for the workmen to continue their buſineſs above four hours together.

The mineral ſtone or ore being dug, and drawn out of the mine, is there broke to pieces with large iron mallets; then brought to a ſtamping mill, where it is ſtill pounded ſmaller with ſtampers, much like thoſe of paper-mills; and the water paſſing through it, waſhes away the earthy parts, leaving the metal behind; the lotion being repeated twice, to make the better ſeparation. When this is done, they dry it in a furnace on iron plates, and grind it very fine in a craſing-mill; then waſh it again, and dry it; in which ſtate the metallic matter is called block-tin. To convert it into white tin, they carry it to a furnace, or blowing-houſe, where, by means of a charcoal fire, kept up by great bellows worked with water, it is ſmelted: after paſſing all theſe preparations, and becoming cold, they forge it, which is the laſt operation. The droſs, or ſcoria ſcummed off the tin infuſion, being melted down with freſh ore, runs into metal; and even the caſualty, which is the matter waſhed and ſeparated from the metal in the mill, being thrown up in heaps, after reſting 6 or 7 years, may be brought over again, and yield as good tin as any of that of Germany.

The workmen diſtinguiſh ſeveral kinds of tin; as moor-tin, which is the beſt ſort, a fool whereof weighs 80 pounds; mine-tin, which is the next, a fool thereof weighing about 52 or 50 pounds. The tin got from the ſoft or gravelly earth, they call pryan-tin, to diſtinguiſh it from that got from the ſtones, which is as good again. Two pounds of block tin, when melted, yield one of white.

Method of aſſaying TIN. To find whether tin is ſoft and ductile, or harſh and brittle, there are two kinds of aſſays; the firſt is by putting the tin into a mould of caſt braſs, and there melting it. If the metal is harſh, it will come out heavier than before; otherwiſe it would be lighter. The ſecond is, by caſting the melted tin into a little mould, made of the thunder-ſtone. This mould has a little canal of moderate length, which conducts the water into a cavity, capable of containing half a billiard-ball: if the tin is harſh, it appears whitiſh towards the entry of the mould; otherwiſe it is tinged ſuperficially with a very faint bluiſh brown.

For the uſe of tin in the compoſition of pewter, ſee *Pewter*.

By the analyſes made of tin, they hold it compounded of earth, ſulphur, a metallic ſalt, and mercury. The chief chemical preparations from it are, ſalt of tin, flower of tin, and diaphoretic of tin.

The importation of Engliſh tin is prohibited in France, by an arret of the 12th of April 1723, in favour of the Siameſe and Malacca tin, imported by the French Eaſt India company.

By the 25th and 33d of Henry VIII. tin-wares made of, or mixed with tin, as platters, diſhes, ſaucers, pots, baſons, ewers, flaggons, goblets, ſalts, ſalt-ſellers, ſpoons, or any other thing made of tin or pewter, may not be bought or bartered for, upon forfeiture thereof, and the value.

TIN-*Plate-worker*, or *Tinman*, an artificer who works in tin, and makes all manner of utenſils of that metal.

TIN-*Plate-workers company* of *London*, was incorporated by letters patent of the 22d of Charles II. dated the 29th of December 1670, by the name of The maſter, wardens, aſſiſtants, and commonalty of the art and myſtery of tin-plate-workers of the city of London; who conſiſt of a maſter, two wardens, and 20 aſſiſtants; but have neither hall nor livery.

Calx of TIN, is the metal reduced into powder, either by of fire, or by being diſſolved in an acid menſtruum, and precipated with an alcali.

Ceruſs of TIN, is a white powder procured from tin, of which a fucus is made, called Spaniſh white. This ceruſs is not made with vinegar, as that of lead is: but with the urine of a young perſon: the powder is alſo uſed to colour delft ware.

Diaphoretic of TIN, is fine tin and regulus of antimony, melted firſt together, and then both with ſaltpetre; whence, after various lotions, is drawn a powder, held to be ſovereign againſt many diſeaſes.

Flower of TIN, is a kind of white coſmetic, or paint for the complexion, drawn with ſal armoniac, by means of a ſublimation.

Salt of TIN, or of *Jupiter*, is tin calcined, and diſtilled vinegar poured thereon, from which, by means of fire, and

then

then of a cool place wherein it is put, a very white ſalt is drawn.

TIN-*Glaſs*, or *Tin of Glaſs*, is what is properly call biſmuth. See *Biſmuth*.

TINCTURE, in pharmacy and chemiſtry, a ſeparation of the finer or more volatile parts of a mixed body, made by means of a proper menſtruum, diſſolving the ſame.

TINCTURE, is more properly uſed for an extract of part of the ſubſtance of a body, eſpecially its virtue and colour; which are hereby communicated to the menſtruum.

The tincture of metals, ſo much talked of by the chemiſts and alchemiſts, are not proper tinctures; being only diſſolutions, wherein the metal is divided and attenuated to a greater degree than it is in its natural and ordinary diſſolvent.

There are cephalic tinctures, antiſcorbutic tinctures, ſtomachic tinctures, anticolic tinctures, and invigorating tinctures; as alſo tinctures drawn from roſes, from corals, and the like.

TINE. A river compoſed of two rivers; the one called North Tine, which riſes on the borders of Scotland; and the other South Tine, which riſes on the confines of Cumberland; the firſt running S. E. and the other N. E. uniting their waters at Hexham, and continuing to run E. divide the counties of Durham and Northumberland, paſſing by Newcaſtle, and falling into the German ſea at Tinmouth.

TINF. See *Tinſe*.

TINIAN. See *Marian* Iſlands.

TINMOUTH. A port-town of Northumberland, ſituated on the German ſea at the mouth of the river Tine, in 1 deg. of W. lon. and 55 deg. of N. lat. 7 or 8 miles E. of Newcaſtle, near which the ſhips take in their lading of coals and ſalt.

TINNING. The covering or lining of any thing with melted tin, or with tin reduced to a very fine leaf. See *Tin*.

Looking-glaſſes are foliated or tinned with thin tables of beaten tin, the whole bigneſs of the glaſs, applied and faſtened thereto by means of quickſilver.

Kettles, ſaucepans, and other kitchen utenſils, are tinned with melted tin; as alſo locks, bits, and ſpurs, with leaf tin, by help of fire.

TINO. An iſland of the Turkiſh Archipelago, ſituated in 26 deg. of E. lon. and 37 deg. 15 min. of N. lat. 60 miles W. of Samos.

TINSE. A ſilver coin of Poland, worth 9 d. ſterling; 6 tinſes making the rixdollar of 4 s. 6 d. ſterling.

TINTENAQUE. A kind of copper brought from China; being the beſt of all the copper produced in the mines of this great empire: but little of it is imported to Europe; the Dutch, who drive on a conſiderable trade thereof, reſerving it all for the Eaſt, where they exchange it for the richeſt merchandiſe. Some think that it is this copper which enters the compoſition of the famous tambac. See *Tambac*.

TIRE, or as the ſeamen pronounce it *Tier*, of guns, is a row of guns placed along a ſhip's ſide, either above, upon deck, or below: the former of which are called the upper tire, the latter the lower tire.

TISSUE. A name given by the manufacturers of gold, ſilver, and ſilk cloth, to all gold or ſilver ſtuffs, full and plain, without flowers and faſhion: but ſome alſo uſe it as a general appellation for all gold and ſilver cloths.

TITHES. The tenth part of all profits or fruits, both predial, perſonal, and mixt.

Perſonal TITHES. Are thoſe due or accruing from the profits of labour, art, trade, navigation, and induſtry of man.

Predial TITHES. Thoſe which ariſe either from the fruits of the ground; as corn, hay, underwood, flax, and hemp: or from the fruits of trees, as apples, pears, plumbs, and cherries; or from the produce of the garden.

Mixt TITHES, are ſuch as ariſe from beaſts, and other animals fed with the fruits of the earth; as cheeſe, milk, lambs, calves and fowls.

Predial TITHES, again, are either great or ſmall.

Great TITHES, are thoſe of corn, hay, and wood.

Small TITHES, are of thoſe which are predial; and thoſe of milk, wool, cheeſe, lambs, and the like, which are mixt.

The tithes of lands newly broke up and cultivated, are called *decimæ novales*, and always belong to the vicar, as well as the ſmall tithes.

TNEK. An edged muſlin for the making of cravats; brought by the Engliſh from the Eaſt Indies; of 16 ells in length, and 3-4ths in breadth.

TOBACCO. A medicinal herb, not known in Europe till after the diſcovery of America by the Spaniards; and firſt imported about the year 1560: but the Americans of the continent called it petun; and thoſe of the iſlands yoli: the Spaniards, who gave it the the name tabaco, took it from Tabaco, a province of Yucatan, where they firſt found it, and firſt learned its uſe.

The French, at its firſt introduction among them, gave it ſeveral names; as nicotiana, or the embaſſador's herb, from John Nicot, the ambaſſador of Francis II. in Portugal, who brought ſome of it with him from Liſbon, which he preſented to a grand prior of the houſe of Lorrain, and to Catherine de Medicis; whence it was alſo called queen's herb, and grand prior's herb. They alſo gave it other names, which are now all reduced to the original name tabaco, or tobacco, from Tabaco, given it by Hernandez de Toledo, who firſt ſent it into Spain and Portugal.

Culture and preparation of TOBACCO. Tobacco is cultivated in ſeveral parts of America, particularly in the Caribbee iſlands, Maryland and Virginia, where they are obliged to mix aſhes with the ſoil, to prevent its riſing too thick. After ſowing, they water it every day; and, on very hot days, cover it up, to prevent its being ſcorched by the ſun. When it is riſen to a convenient pitch, they tranſplant it, as Europeans do lettice; only at a diſtance of three feet, and in a ſoil prepared with great care: when replanted, it is kept continually weeding, the ſtem frequently cleanſed, and the loweſt leaves, with the ſuckers it puts forth, taken off; that 10 or 15 of the fineſt leaves may have all the nouriſhment. The leaves thus reſerved being ripe, which is known by their breaking when bent, the ſtalks are cut and left to dry two or three hours in the ſun; after which they are tied two by two, and hung up on ropes under a ſhed to be dried by the air. When the leaves are ſufficiently dried, they are pulled from off the ſtalks, and made up into little bundles; which, being ſteeped into ſea-water, or for want thereof, in common water, are twiſted in manner of ropes, and the twiſts formed into rolls, by winding with a kind of mill, around a ſtick; in which condition it is imported into Europe, where it is cut by the tobacconiſts for ſmoaking, formed into ſnuff, and the like.

Beſides the tobacco of the Weſt Indies, there are conſiderable quantities cultivated in the Levant, the coaſts of Greece, and the Archipelago, the iſland of Malta, Hungary, and Italy. The marks of good twiſt tobacco, are a fine ſhining cut, an agreeable ſmell, and that it has been well kept.

Tobacco is taken by way of ſnuff, as a ſternutatory, or as a maſticatory, by chewing it in the mouth, or by ſmoaking it in a pipe.

Sig. Paulli, phyſician to the king of Denmark, in an expreſs treatiſe on tobacco obſerves, that the merchants frequently lay it in bog-houſes, that, by becoming impregnated with the volatile ſalt of the excrements, it may be rendered the briſker, more fetid, and ſtronger.

About 200 ſail of Britiſh ſhipping, and a proportional number of mariners, are annually employed in the trade to the tobacco colonies, which take from the mother country about 300,000 l. a year in Britiſh manufactures; and the balance of the general trade of the nation receives about 600,000 l. a year from the tobacco exported to different parts of Europe; however, the article of tobacco is, perhaps, more burthened and oppreſſed with duties than any other commodity whatſoever; for, when the ſubſidy of 1747 took place, it amounted to 4 l. on a hogſhead of tobacco, which was not worth above 5 l. to the planter; and though the real value of tobacco, in the hands of the planter, is not worth above two pence, or two pence halfpenny a pound, the duty on importation amounts to above ſix pence a pound.

By the ſtatute of the 12th of Q. Anne, tobacco, not of the

the Britiſh plantations. The impoſt having been ſecured at importation, if the importer is afterwards deſirous to diſcharge his bond before the expiration of the firſt fifteen months, he is to be allowed a diſcount after the rate of 10 l. *per cent. per annum*, for ſo much of the ſaid fifteen months as remain unexpired.

By the 10th and 11th of Will. III. imported from the Britiſh plantations on the continent of America, in bulk, or otherwiſe than in caſks, cheſts, or caſes, containing each two hundred weight, or 224 lb. at the leaſt, is forfeited, and 6 d. *per* pound weight, exccept ſmall quantities for the crew's ſmoaking: 2-3ds to his majeſty, and 1-3d to the ſeizer or ſuer.

By the 9th of Geo. I. the importer of tobacco of the Britiſh plantations may, if he is not willing to pay ready money, become bound with one or more ſufficient ſureties, to be approved by the collector and comptroller of the port of importation, in one or more bonds, for payment of the additional duty, new ſubſidy, 1-3d ſubſidy and impoſt, within eighteen months, to commence at the end of thirty days after the maſter's report of the ſhip, or from the merchant's entry within thoſe thirty days, which ſhall firſt happen.

If after ſuch ſecurity be given for payment of the duties in eighteen months, the importer be deſirous to diſcharge his bond in ready money, any time before the expiration thereof, he ſhall be abated upon ſuch bond ſo much as the diſcount, at the rate of 7 l. *per cent. per annum*, ſhall amount unto, in proportion to the time unexpired.

Damaged or mean is not to have any allowance, either at the ſcale or otherwiſe; but upon the merchant's refuſing to pay the duty, he may ſeparate ſuch damaged tobacco, by cutting off, from the hogſheads, ſo much as he ſhall refuſe to pay or ſecure cuſtom for; and any three or more of the principal officers of his majeſty's cuſtoms, ſhall cauſe ſuch tobacco to be burnt or deſtroyed: but the ſtalks may not be ſeparated from the leaves, on pretence that the ſame is damaged or mean tobacco.

Having received damage on board by ſtreſs of weather at ſea, or by the ſhip's being on ſhore in Great Britain, or by any accident after her arrival in port; the chief officers of the cuſtoms may allow the importer one halfpenny *per* pound; upon his refuſing to pay or ſecure the duties, and ſeparating it from the ſound in order to be burnt, or deſtroyed by the officers: ſo as ſuch allowance does not exceed 30 s. upon any one ſingle hogſhead.

Allowance for draught at the ſcale, to be only 8 lb. upon every hogſhead of 350 lb. or more. Which allowance is not to be deducted upon exportation.

By the 6th of Q. Anne, only tobacco of the Britiſh plantations, that has paid the duties, and been manufactured in Great Britain, may be conſumed on board Britiſh ſhips of war in any part of Europe; upon forfeiture of their reſpective places of the commanders, or purſers, and 3 s. *per* pound weight.

Tobacco of the growth of Europe, or mixed therewith, may not be ſold or delivered to the ſeamen on board any of his majeſty's ſhips of war.

By the 12th of Geo. I. the ſtalks or ſtems ſtripped from the leaf, may not be imported; and upon ſeizure and condemnation, the commiſſioners of the cuſtoms may cauſe them to be publickly burnt, allowing the ſeizer 1 d. *per* pound weight, clear of all charges of condemnation.

By the 9th of Geo. I. the ſtalks or ſtems, when ſeparated from the reſt of the leaf, and exported by themſelves, are not to have any drawback.

Exported in any package, but caſks of three hundred weight or more; is not to be allowed any drawback, except tobacco cut or rolled.

By the 8th of Q. Anne, exported in ſhips under the burthen of 20 tons, is not to be allowed any drawback.

By the 6th of Geo. I. Exported to Ireland. If, upon producing a certificate, leſs appears to be landed there than ſhipped from hence, an allowance not exceeding 2 *per cent.* may be made for waſte during the voyage.

Entered for other foreign parts, if landed in Ireland, is forfeited, and double the drawback; and the debenture for the drawback is to be void.

Entered out for any other place than Ireland; the exporter is to ſwear that the ſame is not landed in any part of Great Britain or Ireland.

By the 12th of Geo. I. ſeized for being prohibited, or for non-payment of duty, after condemnation, is to be publickly ſold, at ſuch places as the commiſſioners of the cuſtoms ſhall think proper. The ſeizer is to be allowed 1-3d part of the public groſs ſale, free from all charges of condemation and ſale.

Tobacco that will not ſell for the duties, may be burnt, or otherwiſe deſtroyed; and the ſeizer rewarded as the commiſſioners ſhall think proper, not exceeding 1 d. *per* pound.

By the ſtatutes of the 12th, 15th, and 22d of Cha. II. and 5th of Geo. I. tobacco may not be planted in Great Britain, Ireland, Guernſey, or Jerſey; upon forfeiture thereof or the value, and 40 s. for every rod or pole of ground planted; one half to the king, and one half to the ſuer: and alſo 10 l. more; one third to the king, one third to the poor of the pariſh, and one third to the ſuer; except in phyſic gardens; and not exceeding half a rod in any one garden.

By the ſtatute of the 1ſt of Geo. I. leaves of walnut-trees, hops, ſycamore, or any other leaves, herbs, plants, or materials, may not be cut into the form, or in imitation of any of the uſual ſizes or cuts of tobacco of the Britiſh plantations, or coloured or cured to reſemble ſuch tobacco for ſale, or knowingly ſold or offered to ſale as ſuch tobacco; upon forfeiture of 5 s. *per* pound weight.

Such leaves, &c. may not be exported with intent to obtain a drawback as for tobacco; upon forfeiture of 5 s. *per* pound weight, beſides former penalties.

They may, with all engines, utenſils, and tools, be ſearched for, and ſeized by officers of the cuſtoms, at ſeaſonable hours, and with a warrant from the juſtices; who at their quarter-ſeſſions are to determine ſuch ſeizure, and after condemnation, cauſe them to be burnt.

Servants employed in cutting, manufacturing, &c. or ſelling them; upon conviction before two juſtices, may be committed to the houſe of correction, there to remain not exceeding 6 months.

By the ſtatute of the 24th of K. Geo. II. the dealers in tobacco were put under ſome reſtrictions, little better than thoſe of exciſe.

TOBACCONIST. A dealer in tobacco.

TOBACCO-*pipe*. An inſtrument made of clay, for ſmoaking tobacco.

TOBACCO-*pipe-maker*. A perſon who makes tobacco pipes to ſmoak tobacco.

TOBACCO-*pipe-makers company of London*, was incorporated by letters-patent of the 15th of Charles II. dated the 29th of April 1663, by the ſtile of The maſter, wardens, aſſiſtants, and fellowſhip of the company of pipe-makers of the cities of London and Weſtminſter: who have a maſter, two wardens, and 18 aſſiſtants; but neither livery nor hall.

TOBAGO. A ſmall iſland in the bay of Panama, in South America, ſituated in 82 deg. of E. lon. and 8 deg. of N. lat. about 18 miles S. of the city of Panama, and ſupplies that city with fruit and garden ſtuff, ſubject to Spain.

TOBAGO, is alſo one of the neutral Caribbee iſlands.

TOCAT. A city of Aſiatic Turky, ſituated in 37 deg. of E. lon. and 41 deg. 30 min. of N. lat. the capital of the province of Amaſia, anciently part of the kingdom of Pontus, 100 miles S. of Sinope, and the Black ſea, and 250 S. W. of Trebiſond.

TOCOUY, called by the Spaniards *Lienzo de la Terra*, a ſort of coarſe linen manufactured in Spaniſh America, which ſerves the Indians and Negroes.

TOD *of Wool*, is mentioned in the ſtatute of the 12th of Charles II. as a weight containing 28 pounds, or two ſtone, at 14 pounds the ſtone.

TOILET. A fine cloth of linen, ſilk, or tapeſtry, ſpread over the table in a bed-chamber, or dreſſing-room, to undreſs and dreſs upon. They are now made of ſatin, velvet, brocade, and point de France; but anciently were much plainer; whence the name, which is formed from the French, *toilette*, a diminutive of *toile*, any thin ſtuff.

TOISE. A French meaſure, containing ſix of their feet, or a fathom.

TOL-BOOTH, or *Toll-booth*, a place in a city where goods are weighed, to aſcertain the duties or imports thereon.

TOLESBURG. A port town of Livonia, ſituated in 26 deg. of E. lon. and 59 of N. lat. on the gulph of Finland, 60 miles weſt of Narvâ, ſub. to Ruſſia.

TOLL. A Saxon term which, has two acceptations: 1. The liberty of buying and ſelling within the bounds of a manor. 2. The tax or cuſtom paid for paſſage, or for vending goods in a market, fair, or the like. Some records make mention of toll-thoro, or thorough-toll, which is money paid for paſſage in or through ſome highways, or over ferries and bridges. Toll-travers, for paſſing or driving cattle over a private man's ground. Toll-turn, or turn-toll, paid at the return of beaſts from fairs and markets, tho' they were not ſold.

By the ancient law, the buyers of corn and cattle in fairs and markets, ought to pay toll to the lord of the market, in teſtimony of the contract lawfully made there in open market; becauſe private contracts were held unlawful.

Some interpret toll, a liberty, as well to take, as to be free from toll; for that they who are enfeoffed with toll, are cuſtom free. Of this freedom from toll, the city of Coventry boaſts an ancient charter, granted them by Leofrick, or Luriche, earl of the Mercians, in the time of Edward the Confeſſor, who at the importunity of Godeva, his lady, granted this freedom to the city.

TOLL, is alſo the ſmalleſt weight, and meaſure uſed on the coaſt of Coromandel in India; 24 of which make the ceer, and 40 ceers the maund of 25 lb. avoirdupoiſe.

TOLLER. The Swediſh copper rix-dollar, being half a foot in length, 1 foot in breadth, and 1 inch in thickneſs; of the value of a ſilver rixdollar, or 1 s. 6 d. $\frac{2}{3}$ ſterling.

TOLU. A port town of Terra Firma in America, ſituated in 77 deg. of W. lon. and 9 deg. 30 m. of N. lat. on a bay of the north-ſea, 100 miles S. W. of Carthagena.

TOLU, balſam. See *Balſam.*

TOMAN, or *Touman.* A kind of imaginary money, uſed among the Perſians in the keeping of their books, and to facilitate the reduction of money in the payment of conſiderable ſums.

The toman conſiſts of 50 abaſſis, or 100 mamoudi's, or 200 ſhahees, or 10,000 dinars, which amounts to about 3 l. 6 s. 8 d. ſterling.

Dr. Herbelot derives the word from the language of the Moguls, where it ſignifies the number 10,000. Eben Arabſchah ſays, that the word touman, when uſed to expreſs a weight, or money, contains 10,000 ſilver Arab drachmas, called metcal, which are a third lighter than the Attic.

TOMIN. A ſmall weight uſed in Spain, and Spaniſh America, for weighing gold; 8 tomins making the caſtillan, and 6 caſtillans and 2 tomins the ounce.

TOMOLO, or *Tomalo.* A corn meaſure uſed at Naples, as alſo in ſome other parts of Italy; making about one third of the Paris ſeptier, and 19 ſeptiers of Paris being equal to 10 $\frac{3}{4}$ quarters of London.

TON. See *Tun.*

TONALCHILES, one of the four kinds of pepper, brought by Europeans from Guinea.

TONNAGE. See *Tunnage* and *Cuſtoms.*

TONNINGEN. A port-town of Sleſwick, or South Jutland; ſituated in 8 deg. 40. min. of E. lon. and 54 deg. 40 min. of N. lat. near the German ſea at the mouth of the river Eyder, 34 miles W. of Gottorp, ſubject to the Duke of Holſtein. See *Denmark.*

TONQUIN. A kingdom of the further India. See *India.*

White TONQUIN. A ſilk ſtuff, uſually white; brought from China.

TONSA. See *Japaneſe* iſlands.

TONSBURG. A port town of Norway, in the province of Aggerhuys; ſituated in 10 deg. 30 min. of E. lon. and 59 of N. lat. on the Scaggerack ſea, 30 miles W. of Frederickſtat, ſubject to Denmark.

TOOLS. Simple and popular inſtruments, uſed in the more obvious operations; and particularly in the making of other more complex iſtruments: tools being divided into edge-tools, ſpring-tools, and pointed tools.

By the ſtatute of the 23d of Geo. II. for preventing the exportation of tools, or utenſils made uſe of in the woollen and ſilk manufactures, from G. Britain or Ireland into foreign parts; it was enacted, That if any perſon of G. Britain, or Ireland, ſhould, upon any pretence whatſoever, load or put on board any veſſel, not bound directly to ſome port or place in G. Britain or Ireland, or to ſome other dominions of the crown of G. Britain, any tools or utenſils, or any parts or parcels thereof uſed in, or proper, for either the ſilk or woollen manufactures, he ſhould forfeit the ſame, and 200 l.

That if the captain, or maſter of any veſſel, or boat, in G. Britain or Ireland, ſhould knowingly permit any of the ſaid tools, ſo prohibited to be exported, to be put on board his ſhip or veſſel, he ſhould forfeit 100 l. And if ſuch ſhip or veſſel belongs to the king, the captain or maſter thereof ſhould forfeit 100 l. and his employment; as alſo be incapable of any office under the crown.

TOPAZ. A ſort of gem or precious ſtone; the third in order after the diamond; being tranſparent, of a beautiful yellow, or gold colour, very hard, and takes a fine poliſh. It is the true chryſolite of the ancients, found in ſeveral parts of the Indies, in Ethiopia, Arabia, Peru, and Bohemia. The oriental topazes are moſt eſteemed, whoſe colour borders on the orange; thoſe of Peru are ſofter, but their colour much the ſame: the yellow of thoſe of Bohemia is a little blackiſh, being the ſofteſt of all, and their poliſh the coarſeſt. Thoſe of Madagaſcar were in much eſteem, but are now held good for little. Tavernier mentions a topaz, in the poſſeſſion of the Great Mogul, weighing 157 carats, which coſt 20,300 l. ſterling: and Boetius de Boot, in his treatiſe of precious ſtones, affirms to have ſeen, in the cabinet of the emperor Rudolphus, whoſe phyſician he was, a topaz above three feet long, and ſix inches broad; but, probably, it might be ſome marble, a little tranſparent, of a topaz colour. This gem is eaſily counterfeited; and there are factitious ones, which to the eye do not come behind the natural. The topaz, if we may believe the ancients, has very ſingular virtues; but thoſe are now in diſcredit: and yet the topaz is of ſome uſe in medicine, reduced into an impalpable powder and applied in water. Some ſay it takes its name from an iſland in the Red-ſea, of the ſame name, where it was firſt found by Juba, king of Mauritania; but it was known to the Hebrews before, as appears from the 118th pſalm.

TOPICS, in medicine, are commonly uſed for what are otherwiſe called external remedies; that is, ſuch as are applied outwardly to ſome particular diſeaſe, or painful part; ſuch as plaiſters, cataplaſms, bliſters, unguents, ſalves, and collyriums.

TOPSHAM. A port-town of Devon; ſituated in 3 deg. 40 min. of W. lon. and 50 deg. 37 min. of N. lat. on the river Ex, four miles S. of the city of Exeter, and about as much N. of the Engliſh channel.

TOQUE. A term in China, for the manner of valuing the ſtandard or fineneſs of ſilver, divided into toques, as in England into penny-weights. The fineſt ſilver is of 1 toques, and the coarſeſt of 24; under which none is current in trade.

TOQUE, is alſo a muſlin, brought from the Eaſt Indies, particularly from Bengal; the piece being 16 ells in length and $\frac{7}{12}$ and half an ell in breadth.

TOQUE, is likewiſe a money of accompt, uſed at Judda, and in ſome other parts of the coaſt of Africa, where the Bouges, or Coris, are received in the negroe trade. A toque of Bouges being compoſed of 40 of theſe ſhells. See *Cari*

TORBAY. A fine bay in the Britiſh channel, on the coaſt of Devon, a little E. of Dartmouth, formed by the two capes called Bury-point and Bob's-noſe.

TORCELLA. A port-town of Spain, in the province of Catalonia; ſituated in 2 deg. 50 min. of E. lon. and deg. of N. lat. on the Mediterranean ſea, at the mouth of the river Ter, 15 miles E. of Gironne.

TORCH. A ſort of luminary; being properly a ſtick of fir, or other reſinous or combuſtible matter, as pine, linden, more or leſs thick and long, which being lighted yield a kind of gloomy brightneſs; and are uſed in ſome church ceremonies, particularly at the proceſſions of the holy ſacraments; as alſo at the interment of the poor people

people. Formerly, they were uſed at the funerals of thoſe of the firſt rank; but tapers and flambeaux are now introduced in their ſtead.

TORMENTILLA. A plant brought from the Alps, and Pyreneans, whoſe root is tubercular, garniſhed with ſmall filaments, reddiſh or brown on the outſide; its taſte ſharp and ſtyptic, being in medicine as a ſudorific, and excellent in the dyſentery.

TORNADO, or *Turnado*. A violent and ſudden guſt of wind, from all points of the compaſs, frequent on the coaſt of Guinea.

TORNE. A river, riſing on the confines of Norwegian Lapland, which runs from the N. W to the S. E. thro' the province of Torne, falling into the bottom of the Bothnic gulph at the town of Thorne; being a very large rapid river, with a great many cataracts in it.

TORRES. A port-town in Spain, in the province of Granada; ſituated in 4 deg. 16 min. of W. lon. and 36 deg. 45 min. of N. lat. on the mediterranean, 45 miles S. W. of Granada.

TORREFACTION, in pharmacy. A kind of roaſting or aſſation, wherein a drug is laid to dry, on a metalline plate placed over coals, till it becomes friable to the fingers.

TORRID-*Zone*, that tract of earth lying under the line, and extending on each ſide to the two tropics, or to 23 deg. and a half of lat. The ancients believed it uninhabitable; but, from the late navigations, we know that the exceſſive heat of the day there is tempered by the coldneſs of the night.

TORTOISE-*ſhell*, the ſhell, or rather the ſcales of a teſtaceous animal, called a tortoiſe or turtle, uſed in inlaying, and in various other works, ſuch as for ſnuff-boxes, and combs. There are two kinds of Tortoiſes, the land, and the ſea tortoiſe; the land tortoiſe, again, is of four kinds, namely, the freſh tortoiſe, the caretta, the cahohanna, and the lager-hu; but it is only the caretta which furniſhes that beautiful ſhell, ſo much admired in Europe; and it is the under ſhell alone which is uſed. The whole ſpoils of the caretta conſiſt in 13 leaves or ſcales, 8 of them flat, and five a little bent: of the flat ſort, there are 4 large ones, about a foot long, and 7 inches broad.

The beſt tortoiſe-ſhell is thick, clear, and tranſparent, of the colour of antimony, ſprinkled with brown and white; but, when uſed in marquetry, the workmen give it what colour they pleaſe, by means of coloured leaves which they put underneath.

In generation, Rondeletius obſerves, the embraces of the male and female ſea-tortoiſe continue for a whole lunar month; and that they ſquirt water out of their noſtrils in the ſame manner with the dolphin. On the Braſilian ſhore, they are ſaid to be ſo big, as ſometimes to dine fourſcore men; and that in the Indian ſea, the ſhells ſerve the natives for boats. De Laet obſerves, that in the iſland of Cuba, they are of ſuch a bulk, that they will creep along with five men on their backs: and the iſland of Aſcenſion is remarkable for great quantities of them, which afford a good ſupply for navigators to the Eaſt Indies.

TORTUGA. An iſland in the American ocean; ſituated in 73 deg. of W. lon. and 20 deg. of N. lat.

TORTUGA. Another iſland in the American ocean, near the coaſt of Terra Firma; ſituated in 64. deg. of W. lon. and 11 deg. 30 min. of N. lat. 40 miles W. of the iſland of Margaretta, about 30 miles in circumference; being a barren iſland, and only valuable for the great quantities of ſalt made here, from whence it has taken its name of Salt-Tortuga, which abounds in tortoiſes, as the other Tortuga does.

TOSA. A port-town of Spain, in the province of Catalonia; ſituated in 2 deg. 46 min. of E. lon. and 41 deg. 35 min. of N. lat. 37 miles N. E. of Catalonia.

TOTTED. A good debt to the king, is, by the foreign appriſer, or other officer in the exchequer, noted for ſuch, by writing the word Tot, which is as much as to ſay, *tot pecuniæ regi debentur*; whence it is ſaid to be totted: alſo that which is paid is to be totted.

TOUANSE. A Chineſe kind of ſatin, either plain, flowered or figured with birds, trees and clouds.

TOUCH *the wind*, in the ſea language, is when the ſteerſman at the helm is bid to keep the ſhip as near the wind as may be.

TOUCHSTONE. A black, ſmooth, gloſſy ſtone, uſed to try metals upon. The ancients called it *lapis lydius*, or the Lydian ſtone, from Lydia, a country of Aſia minor, whence it was brought; but the moderns call it touchſtone, in regard the proof they make of metals, chiefly ſilver, is by touching or rubbing the metal to be tried on this ſtone, and comparing the colour of the mark it leaves thereon, with the mark of another piece of metal of the ſame ſpecies, whoſe goodneſs has been aſcertained.

TOUL. A city of Lorrain; ſituated in 5 deg. 40 min. of E. lon. and 48 deg. 45 min. of N. lat. on the river Moſelle, 12 miles W. of Nancy, ſubject to France.

TOULON. See *Thoulon*.

TOURC, or *Turq*. A ſilver coin current in Lorrain, worth about 9 d. ſterling.

TOURS. A city in France, in the province of Orleanois, capital of Tourain; ſituated in 45 min. of E. lon. and 47 deg. 25 min. of N. lat. on the river Loyre.

TOW. Whatever is drawn or dragged, after a ſhip or boat, with a rope, is called a tow, or ſaid to be towed.

TOWAGE. The haling or drawing a ſhip or barge, by men or beaſts, or another boat or ſhip faſtened to her, in order to make her enter a port, aſcend a river, or the like. The term is alſo uſed for money, or other recompence, given by bargemen to the owner of the ground next the river where they tow a barge or other veſſel, for the liberty of paſſing along the ſide thereof.

TOWN. A place furniſhed with houſes and inhabitants, ſome bigger, and ſome leſſer. To conſtitute a town, there muſt either be now, or was there formerly, a church, with celebration of divine ſacraments, and burials; and tho' a town may through length of time, become ſo decayed, as to have no houſes remaining, yet, in law, it is ſtill a town. In England and Wales, there are 8,803 towns, or thereabouts. A town is the genus, and a borough the ſpecies, but every town is not a borough. See *Borough* and *City*.

Freedom of a TOWN. See *Freedom*.

Hanſe TOWN. See *Hanſe*.

TOYS. Play-things, to pleaſe children: alſo any ſort of trifling curioſities, furniſhed either by art or nature.

TRADE, *traffic* or *commerce*. Or the act or art of dealing, ſelling, and exchanging commodities, bills, and money. See *Exchange* and *Commerce*.

Balance of TRADE. See *Balance*.

Rules for TRADE. See *Commerce*.

TRADE and *Plantation-office*. An office kept at the N. E. corner of Kingſtreet, Weſtminſter, which is under the direction of 8 commiſſioners, whoſe buſineſs it is to examine the cuſtom-houſe accompts of all the goods and merchandize, exported and imported from and to the ſeveral ports of the kingdom, as well as from foreign parts; thereby to inform the government, in reſpect to the advantages and diſadvantages of the trade of the nation, with the ſeveral kingdoms and ſtates beyond ſea, in regard to the balance of trade; and alſo to encourage the Britiſh plantations abroad, by endeavouring to diſcover what branches of trade are the moſt conducive to their reſpective intereſts, as well as that of the kingdom.

TRADE-*winds*. Denote certain regular winds at ſea, blowing either conſtantly the ſame way, or alternately this way and that: thus called from their great uſe in navigation, and the Indian commerce. The trade-winds are of different kinds; ſome blowing 3 or 6 months of the year one way, and then the like ſpace of time the oppoſite way, very common in the Indian ſeas, and called monſoons. Others blow conſtantly the ſame way; ſuch is that general wind between the tropics; which, off at ſea, is found to blow all the day long from Eaſt to Weſt. See *Wind*.

Dr. Liſter has made a conjecture, in the philoſophical tranſactions, that the tropical or trade-winds ariſe, in great part, from the daily and conſtant breath of a ſea-plant, called the Sargoſſa, or Lenticula marina, which grows in great quantities from 36 to 18 deg. of N. lat. and elſewhere upon the deepeſt ſeas. For the matter

of

of wind, coming from the breath of one only plant, muſt needs be conſtant and uniform; whereas the great variety of trees and plants at land, furniſhes a confuſed matter of winds. Hence, he adds, it is, that theſe winds are briſkeſt about noon; the ſun quickening the plant moſt about that time, and cauſing it to breathe faſter and more vigorouſly. Laſtly, the direction of this wind from eaſt to weſt, he attributes to the general current of the ſea; for a gentle air is obſerved to be conſtantly led along with the ſtream of a river; nor muſt it be omitted, that every plant is in ſome meaſure a heliotrope, and bends itſelf, moving after the ſun, and conſequently emitting its vapour that way; ſo that the direction of the trade-wind is, in ſome meaſure, owing to the courſe of the ſun.

Dr. Gordon has another hypotheſis: the atmoſphere, which ſurrounds the earth, and moves along with it in its diurnal motion, he ſuppoſes to keep pace therewith; that part of it, at leaſt, which is near the earth, if the remoter part ſhould be judged to loſe ground: if then, there were no changes in the gravity of the atmoſphere, he ſuppoſes it would always go along with the earth from weſt to eaſt in an uniform motion, altogether inſenſible to us; but the portion of the atmoſphere under the line being extremely rarified, its ſpring expanded, and ſo its gravity and preſſure much leſs than the neighbouring parts of the atmoſphere, it is incapable of the uniform motion towards the eaſt, and muſt therefore be preſſed weſtwards, which makes the continual breeze from weſt to eaſt between the tropics.

TRADING-*Company*. See *Company*.

TRAFALGAR-*Cape*, or *Cape Trafalgar*. A point or promontory of Spain, in the province of Andaluſia; ſituated in 6 deg. 26 min. of W. lon. and 36 deg. of N. lat. at the entrance of the ſtraits of Gibraltar, 30 miles S. of Cadiz.

TRAFFIC. See *Trade* and *Commerce*.

TRAGACANTH, *Gum-dragon*. A kind of gum, oozing out at inciſions made in the trunk and larger branches of a plant, or little ſhrub, of the ſame name.

The naked hillocks of mount Ida in Candia, Mr. Tournefort tells us, produce a deal of the plant tragacanth, or goats-thorn, which gives the gum ſpontaneouſly towards the end of June, and in the following months, when the nutricious juice of the plant, thickened by the heat, burſts moſt of the veſſels it is contained in. This juice coagulates in threads, which make their way into the pores of the bark; where, being puſhed forwards by new juice, they get through the bark, and are at length hardened in the air, either into little lumps, or into twiſted pieces in form of little worms. The plant grows alſo in ſeveral places of the Levant, particularly about Aleppo. The gum is of different colours and qualities; ſome being white, ſome greyiſh, ſome red, and ſome almoſt black: but the white is the beſt, which muſt be choſen clear, ſmooth, and twiſted worm-like. It diſſolves eaſily in any aqueous menſtruum, to which it will give the conſiſtence of a ſyrup, in the ſmall proportion of a dram to a pint. It is ſmooth and ſoftening, therefore good to obtund the acrimony of any humour; which makes it of ſervice in ſuch coughs as proceed from catarrhs, and defluxions of rheum. It is alſo very ſtrengthening in ſome ſeminal weakneſſes, and prevalent againſt the whites in women.

TRAGEA, in pharmacy. An aromatic powder, groſly beaten, and mixed with ſugar, taken by way of carminative.

TRAIL-*Board* in a ſhip, is a carved board on each ſide of her beak, which reaches from the main ſtem to the figure, or the brackets.

TRAIN-*Oil*. The oil procured from the blubber of whales. See *Oil*.

TRAMBLING, of tin ore, among miners, is the waſhing of it very clean, which is done with a ſhovel, and in a frame of boards.

TRAMEL. An inſtrument, or device, ſometimes of leather, more uſually of rope, fitted to a horſe's legs, to regulate his motion, and form him to an amble.

TRANI. A city and port-town of Italy, in the kingdom of Naples, and territory of Barri; ſituated in 18 deg. of E. lon. and 41 deg. 15 min. of N. lat. on the gulph of Venice, 20 miles W. of Barri.

TRANSFER, in *Commerce*. An act whereby a perſon ſurrenders his right, intereſt, or property in any thing, moveable or immoveable, to another. But the term is principally uſed in the commerce of ſtocks, for the aſſigning and making over ſubſcriptions or ſhares therein, to ſuch as purchaſe them of the proprietors. In the South-Sea company book, Eaſt India, and others, transfers are made, by eraſing the former proprietors names, and entering the ſtock in the name of the purchaſer, under his proper letter of the alphabet; and, in order to transfers, it is required the party bring another with him to ſwear he is the perſon to whom the ſtock is entered; counterfeits in this caſe, being, by act of parliament, made capital.

TRANSFUSION. The art of pouring liquor out of one veſſel into another.

In the frequent preparations of chemiſtry and pharmacy, there are frequent transfuſions of ſpirits, liquors, and ſyrups.

TRANSIRE, in the ſtat. of the 14th of Car. II. is uſed for a cuſtom-houſe warrant, to let paſs: from the verb, *tranſeo*, I go forth.

TRANSMARINE. Something that comes from, or belongs to, the parts beyond ſea.

TRANSOM, in a ſhip, is a piece of timber which lies athwart the ſtern, between the two faſhion pieces, directly under the gun-room-port.

TRANSPLANTATION, in *Agriculture* and *Gardening*. The art of removing trees or plants from the places where they were ſowed or bred up, and planting them in others.

In the tranſplanting of foreſt trees, care muſt be taken to preſerve the roots, and even the fine hairs and filaments thereof, with the earth that ſticks thereto; theſe filaments being the mouths that ſuck the nouriſhment, and transfuſe it to the tree. The pits or foſſes, into which trees are tranſplanted, ſhould be left open for ſome time before-hand; that the rain, froſt, and ſun, may diſſolve the compacted ſalt, render the earth friable, and qualify it for nouriſhing the tree.

Pliny was of opinion, that no tree ſhould be removed under two, or above three years old. Cato would have none tranſplanted leſs than five fingers in diameter; but we are now able to tranſplant trees of all ages and ſizes, without danger.

The common rules for tranſplanting, are, 1. The lighter the ſoil is, the deeper are the trees to be planted. 2. If the ſoil is gravel, or ſand, mix clay with it, and *vice verſa*. 3. The beſt ſeaſon is in October or February, in warm moiſt and clear weather. 4. The large roots to be abated, to prevent the neceſſity of digging too deep; but the ſmall fibrous ones to be ſpared. 5. In taking up the trees, to obſerve how the roots grow, and in tranſplanting, to diſpoſe them in the ſame order, and place the tree to the ſame aſpect. 6. To defend young trees after tranſplantation both from the wind and ſun, till the roots are fixed, and begin to ſhoot. 7. If the ſoil the tree is tranſplanted into is good, it ſhould not be topped, but all the boughs lopped to one ſingle one, the moſt upright and promiſing among them: but if the ſoil is poor, they ſhould be topped; and when they are ſhot out again, all the branches ſhould be lopped off to one.

TRANSPORT, is a perſon who is ſent, or tranſported from his native country, to ſome of the American provinces, for committing ſome felony or miſdemeanour: tho' there are ſome tranſports who voluntarily ſell or indent themſelves, as ſervants, for a certain term, in the plantations.

TRANSPORT-*Ship*, is a veſſel uſed to convey proviſions, corn, ſoldiers, and warlike ſtores.

TRANSPORTATION. The act of conveying, or carrying a thing from one place or country to another. See *Exportation*.

In matters of commerce, tranſportation is of equal import with re-exportation; or the taking up of commodities in one foreign ſtate or kingdom, bringing them hither, and paying duties for them, and then conveying them into ſome other foreign ſtate; by which it is diſtinguiſhed from importation, and exportation, where the commodities are

are either carried originally out of, or brought finally into our own kingdom. Our tranſportation or re-exportation of wool, butter, hides, tallow, herrings, beef, and ſalmon, which we tranſport from Ireland to other colonies and provinces, being the concerns of our merchants, and paying duties to his majeſty, have been reckoned at 300,000 *l. per annum.*

But it would be tedious to enumerate our tranſportations from Denmark, Sweden, Spain, Portugal, the Streights, Turkey, and Guinea; yet the moſt conſiderable is from the Eaſt Indies. In the infancy of that trade, and in the year 1613, of pepper only, beſides what we conſumed at home, we tranſported in one year, to other countries, after it had paid duty here, to the value of 200,000 *l.* and of late years our exportation of what we bring from thence, after we have ſupplied ourſelves, has been computed at 300,000 *l.* ſterling. See *Navigation* and *Commerce*.

TRANTERY. In ſome cuſtoms, denotes the money ariſing by amerciaments of ale-ſellers and victuallers, for breaking the aſſize of bread and ale, particularly at Luſton, and other manors in Herefordſhire. See *Aſſize*.

TRAPANO. A city and port-town in Sicily; ſituated in 12 deg. 8 min. of E. lon. and 38 deg. of N. lat. on the W. part of the iſland; 30 miles from Palermo, being a ſecure harbour, and one of the laſt places the Romans took from the Carthaginians in this iſland.

TRAPEZOND, or *Trebiſond*. A city and port-town of Aſiatic Turky; ſituated in 42 deg. 20 min. of E. lon. and 42 deg. 26 min. of N. lat. in the province of Amaſia, on the Black Sea; being a large town, and once a fine harbour; but can only receive ſmall veſſels at preſent.

TRAVADO. A ſudden or impetuous wind, or hurricane, frequent in the Atlantic ocean, between Braſil and Africa, and about the Cape of Good Hope: before this ſtorm, it is very calm, when there appears a ſmall cloud, called by the ſeamen an ox-eye, over one of the peaks of the promontory; which, falling lower, covers the whole ſummit: upon ſight of this, the mariners furl their ſails, and get from the ſhore with the utmoſt expedition, to avoid its fury; for, of a ſudden, a terrible wind ruſhes from the top of the mountain, and deſtroys all ſhips within its reach: but thoſe whirlwinds that ſurprize travellers in the deſerts of Arabia, ſeem to be of the ſame nature.

TRAVEMUND. A port-town of Germany, ſubject to the duke of Holſtein; ſituated in 10 deg. 45 min. of E. lon. and 44 deg. 30 min. of N. lat. on the Baltic ſea, at the mouth of the river Trave, 10 miles N. E. of Lubeck.

TRAVERSE, in *Navigation*, is the variation or alteration of a ſhip's courſe, occaſioned by the ſhifting of the winds and currents. See *Courſe*.

Traverſe ſailing is uſed, when a ſhip, having ſet ſail from one port to another, whoſe courſe and diſtance from the port ſailed from is given or known, is, by reaſon of winds or other accidents, forced to ſhift, and ſail on different courſes, which are to be brought into one courſe, to learn, after ſo many turns and windings, the true courſe and diſtance made from the place ſailed from, and the true point or place where the ſhip is, that ſo, the wind coming fair, it may be known how to ſhape a courſe for the place intended. See *Sailing*. This may be performed geometrically two ways; firſt, by drawing two meridians, thro' the extremity of every courſe, parallel to the firſt meridian, or North and South line, at firſt made, and ſetting of every courſe with a ſweep of 60, as if it were a queſtion in plain ſailing. You may alſo let fall perpendiculars to every new meridian, from the point that the ſhip ſailed to upon that courſe; by which you have the courſe, diſtance, difference of latitude, and departure to every courſe.

To work a TRAVERSE *by the tables of difference of latitude and departure*. This is the principal uſe thoſe tables are intended for; and the way of working a traverſe hereby, is equal to the beſt for exactneſs, and ſuperior in point of expedition. Make a little table with ſix columns, the firſt for the courſe, the ſecond for the diſtance, and the third for the northing, the fourth for the ſouthing, the fifth for the eaſting, and the ſixth for the weſting: then find the difference of the latitude, with the departure to every courſe, and ſet them in their proper columns; as, where the courſe is northerly, ſet the diſtance of the latitude under northing, or in the north column; and, where the difference is ſoutherly, ſet the difference of latitude in the ſouth column. Again, where the courſe is eaſterly, ſet the departure in the eaſt column; and, when weſterly, ſet it in the weſt column: then, adding up each column by itſelf, ſubtract the north and ſouth columns, the leſſer from the greater, the remainder is the ſouthing made good: alſo ſubtract the eaſt and weſt columns, the leſſer from the greater, the remainder is the eaſting or weſting made good; then you have the difference of latitude and departure given, to find the courſe and diſtance.

TRAW. A port-town of Dalmatia; ſituated in 17 deg. 30 min. of E. lon. and 43 deg. 10 min. of N. lat. on the gulph of Venice, 15 miles E. of Spaletto, ſubject to Venice.

TREACLE, in pharmacy. A medicine that expels poiſon. The manner of compoſition is various, according to the application: but in common, it means only that thick conſiſtence of droſſy matter, that ſugar-bakers extract in their refining or making loaf-ſugar, which is frequently eaten like butter ſpread upon bread; and by ſome is made into drink. See *Theriaca*.

TREASURER. An officer, to whom the treaſure of a prince or corporation is committed to be kept, and duly diſpoſed of in payment of the officers and other expences. Of theſe there are a great variety: his majeſty of Great Britain, in quality of elector of Brunſwick, is arch-treaſurer of the Roman empire. In the ſtates of Poland, are two grand treaſurers, that of the kingdom of Poland, and that of the dutchy of Lithuania. In England, the principal officers under this denomination are the lord high-treaſurer, the treaſurer of the houſhold, treaſurer of the navy, of the wardrobe, and of the king's chamber.

Lord High TREASURER of *England*, is the third great officer of the crown, under whoſe charge and government all the king's revenue is kept in the exchequer.

He receives the office by delivery of a white ſtaff to him by the king, and holds it during the king's pleaſure; but, anciently, he received it by delivery of the golden keys of the treaſury. He has the check of all the officers any ways employed in collecting impoſts, cuſtoms, tributes, or other revenues of the crown. He has the gift of all the cuſtomers, comptrollers, and ſearchers places, in all the ports of London, and the nomination of the eſcheators in every county. See *Cuſtom*-houſe.

He alone, or others in commiſſion with him, lets leaſes of all the crown lands, and gives warrants to certain perſons of quality to have their wine cuſtom free. The ancient yearly ſalary was 383 *l.* but of late is ſaid to have been 8000 *l.* though this office is now in commiſſion.

TREASURER of the *Navy*, is an officer who receives money out of the exchequer, by warrant from the lord high-treaſurer, or the lords commiſſioners executing that office; and pays all charges of the navy, by warrant from the principal officers of the navy.

TREASURY. The place wherein the revenues of a prince are received, preſerved, and diſburſed. In England, the treaſury is a part of the exchequer, and by ſome called the lower exchequer. The officers of the lower exchequer are, the lord treaſurer, a chancellor, a ſecretary, two chamberlains, an auditor, four tellers, a clerk of the pells, uſher of the receipt, a tally cutter, and others.

Lords of the TREASURY. Inſtead of one ſingle director and adminiſtrator of his majeſty's revenues, under the title of lord high treaſurer, it is frequently thought proper to put that office in commiſſion; that is, to appoint ſeveral perſons to diſcharge it, with equal authority, under the title of lords commiſſioners of the treaſury.

TREATY. A covenant between ſeveral nations, or the ſeveral articles or conditions ſtipulated and agreed upon between ſovereign powers. There are treaties of peace, of marriage, of confederacy, of neutrality, of capitulation, and of commerce and navigation.

TREATIES of *Commerce*, are uſually followed by various tarifs, to adjuſt the duties of exportation and importation of merchandizes into the reſpective dominions of the contracting powers.

TREATIES, in general, are concluded either with enemies,

or friends, or neuters, and tend to compoſe all differences of princes at war, or to reſtore the commerce of kingdoms and ſtates.

In all treaties, it is a maxim, that the power of the one party, and the other, ought to be equal; nor ſhall they be held firm till ratified. But there are alliances contracted between princes and ſtates, unequal in honour and power; being treaties made with thoſe ſtates which give or take penſions.

By the laws of alliances, princes may aid particular and common allies, if wronged by any one ally; though he, who is not comprehended in the treaty of alliance, cannot be defended againſt him who is allied, without breach of the alliance; therefore, mediation in ſuch caſes is the only hope of the oppreſſed: but if this has not its effect, and they put themſelves into the protection of the mediator, they become in the nature of his ſubjects; when that prince is obliged to their defence, even againſt his allies; and this is by natural right in theſe caſes.

Some perſons would judge of treaties, as lawyers do of contracts; and ſay, that as a private man is not bound by that which he has promiſed by force or fear; ſo it ought to take place among princes, and in treaties which are made between ſovereigns: but that would be unjuſt and ridiculous; for it were in effect to baniſh faith from all public negociations; and there is no treaty, but what is uſually made in arms, by force, or through fear, to loſe either life, or goods, or liberty, or the ſtate; which are cauſes of juſt fear, and may ſhake the moſt conſtant perſons.

Princes, who neither love nor hate any thing, ſeem generally inclined to neutrality; and, in that, govern themſelves in their friendſhips, according to their intereſts. This neutrality may be of two kinds; the one with alliance with either party; the other without, which is what is properly ſo called: the firſt is governed by the treaty of neutrality; the latter by the diſcretion of the neuter prince, whoſe carriage ought always to be ſuch, as that he may not give the leaſt ſuſpicion of inclining more to one than to another. And the advantages of neutrality are, that the neutral prince, or republic, is honoured and reſpected of both parties, and, by the fear of his declaring againſt one of them, remains arbitrator of others, and maſter of himſelf.

In the year 1652, the Dutch, being engaged in a war with England, were glad to take advantage of the miſunderſtandings which then aroſe between this country and Denmark; and ſo concluded a particular treaty of alliance with Frederick the III. then reigning in that kingdom: and the effect of this good underſtanding between the Danes and the Dutch, viſibly appeared by another treaty entered into by thoſe two powers, at Copenhagen, in the following year. But notwithſtanding this ſtrict union with the king and crown of Denmark, the Hollanders beginning very ſoon to be weary of the war with this country, were obliged to relinquiſh all other advantages, to conclude a treaty of peace; of which treaty, for the ſatisfaction of the curious, here follows an abſtract of the moſt material articles.

Abſtract of a treaty of peace and union between Oliver Cromwell, *as protector of* England, *and the* United Provinces *of the* Low-Countries.

That, in the firſt place, it is agreed, granted and concluded, That from this day forward, there ſhall be a true, firm, and inviolable peace, ſincere friendſhip, and a nearer and ſtraiter affinity, confederation, and union, between the republic of England, and the States General of the United Provinces of the Low-Countries, and the lands, regions, and cities ſituate under their juriſdiction without diſtinction, and between their people and inhabitants, of any degree whatſoever.

That ſuch as attempt to diſturb the peace of either ſtate, ſhall be reputed enemies.

That the ſubjects of either ſtate ſhall freely travel through, and trade to all the dominions of the other in Europe, without prejudice of the laws and cuſtoms of particular places.

That as well the ſhips of war, as the other ſhips of the United Provinces, meeting with the ſhips of war of this ſtate in the Britiſh ſeas, ſhall ſtrike their flag, and lower their top-ſail, in the ſame manner as that has been performed in any former time, under any government whatſoever.

That for the better ſecurity and encouragement of trade, all pirates be duly puniſhed in the dominions of either ſtate; and the effects ſeized in their cuſtody, reſtored to the right owners, if any can be found.

That the merchants, mariners, ſailors, and pilots, &c. of neither ſtate, nor their ſhips, goods or effects, ſhall not be detained or arreſted, or forced into the ſervice of the other, without an abſolute neceſſity; in which caſe too, ſatisfaction ſhall be given for the ſame.

The following articles of this treaty, after inſiſting upon the Dutch doing juſtice on all thoſe concerned in killing the Engliſh at Amboyna, only contain ſome ſtipulations for receiving the king of Denmark into it, and for procuring the reſtitution of ſome Engliſh effects ſeized in that country, and reparation of damage, &c.

On the reſtoration of King Charles the II. to his dominions, a marine treaty was concluded between that king and the States General of Holland; in which they compoſed all ancient differences: and in the year 1667, a treaty of peace and alliance, with certain articles relating to commerce, &c. was concluded and agreed upon between the aforeſaid King Charles the II. and the States General; but as the firſt eighteen articles of the treaty have no relation to marine affairs, and the 19th being the ſame with the 13th article of the precedent treaty, already inſerted; it is neceſſary to begin at the 20th article of this treaty, in the order it is found in the original.

Some extraordinary articles relating to commerce and marine affairs, in a treaty of peace and alliance concluded between King Charles *the II. and the* States General *of* Holland, *the 21ſt of* July 1667.

XX. And for the greater freedom of commerce and navigation, it is agreed and concluded, That the ſaid king of Great Britain, and the ſaid States General, ſhall not receive into their havens, cities, and towns, nor ſuffer that any of the ſubjects of either party do receive pirates or ſea-rovers, or afford them any entertainment, aſſiſtance, or proviſion; but ſhall endeavour that the ſaid pirates and ſea-rovers, or their partners, ſharers and abettors, be found out, apprehended, and ſuffer condign puniſhment, for the terror of others: and all the ſhips, goods, and commodities piratically taken by them, and brought into the ports of either party, which can be found, although they be ſold, ſhall be reſtored to the right owners; or ſatisfaction ſhall be given, either to their owners, or thoſe who by letters of attorney ſhall challenge the ſame; provided the right of their propriety be made to appear in the court of admiralty by due proofs, according to law.

XXI. It ſhall not be permitted to the ſubjects of the ſaid king of Great Britain, and the inhabitants of the kingdoms and countries under his obedience, or to the inhabitants and ſubjects of the ſaid United Provinces, to do or offer any hoſtility or violence to each other, either by land or ſea, upon any pretence whatſoever: and conſequently, it ſhall not be lawful for the ſaid ſubjects, or inhabitants, to get commiſſions or letters of repriſal, from any prince or ſtate with whom either of the confederates is at difference, or in open war; and much leſs, by virtue of ſuch letters, to moleſt or damnify the ſubjects of either party. Neither ſhall it be lawful for any foreign private men of war, that are not ſubject to one or the other party, having commiſſions from any other prince or ſtate, to equip their ſhips in the harbours of either of the aforeſaid parties, or to ſell or ranſom their prizes, or any other way to truck, as well the ſhips and goods, as any other lading whatſoever. And it ſhall not be lawful for them to buy any victuals, but what ſhall be neceſſary to bring them to the next port of that prince, from whom they obtained their ſaid commiſſions. And if, perchance, any of the ſubjects of the ſaid King of Great Britain, or of the ſaid States General, ſhall buy, or get to themſelves by truck, or any other way, ſuch ſhip or goods which have been taken from the ſubjects of the one or the other party; in ſuch caſe, the ſaid ſubjects ſhall be bound to reſtore the ſaid ſhip or goods to the proprietor without any delay, and without any compenſation or reimburſement

of money, paid or promiſed for the ſame; provided that they make it appear, before the council of the ſaid King of Great Britain, or before the States General, that they are the right owners or proprietors of them.

XXII. That in caſe the King of Great Britain, or the ſaid States General, make any treaty of amity or alliance with any other kings, republics, princes, or ſtates, they ſhall therein comprehend each other and their dominions, if they deſire to be therein comprehended; and ſhall give to the other notice of all ſuch treaties of friendſhip or alliance.

XXIII. That in caſe it happens, during this friendſhip, confederacy, and alliance, that any thing ſhall be done or attempted by any of the ſubjects or inhabitants of either party againſt this treaty, or any part thereof, by land, ſea, or freſh waters, nevertheleſs this amity and alliance between the ſaid nations, ſhall not thereby be broken or interrupted, but ſhall remain and continue in its full force; and that only thoſe particular perſons ſhall be puniſhed, who have committed any thing againſt this treaty, and none elſe; and that juſtice ſhall be rendered, and ſatisfaction given to all perſons concerned, by all ſuch who have committed any thing contrary to this treaty, by land or ſea, or other waters, in any part of Europe, or any places within the Streights, or in America, or in any lands, iſlands, ſeas, creeks, bays, rivers, or any places on this ſide the Cape of Good Hope, within twelve months ſpace after juſtice ſhall be demanded; and in all places whatſoever on the other ſide of the ſaid Cape, within eighteen months next enſuing, after demand of juſtice ſhall be made in manner aforeſaid. But, in caſe the offenders againſt this treaty do not appear, and ſubmit themſelves to judgment, and give ſatisfaction within the reſpective times above expreſſed, proportionably to the diſtance of the places, they ſhall be declared enemies of both parties, and their eſtates, goods, and revenues whatſoever ſhall be confiſcated, for the due and full ſatisfaction of the injuries and wrongs by them offered; and their perſons alſo, when they come within the dominions of either party, ſhall be liable unto ſuch puniſhments as every one ſhall deſerve for his reſpective offences.

XXIV. That the ſubjects of the ſaid King of Great Britain, and thoſe under his juriſdiction, may freely and ſecurely travel in all the provinces of the Low countries and dominions of the States General in Europe, and through them, by ſea or land, paſs to other places there or beyond them; and through all quarters of the United Provinces, cities, forts or garriſons whatſoever, which are in any parts of the ſaid provinces, or elſewhere in their dominions in Europe, as well they themſelves exerciſing trade in all thoſe places, as their agents, factors, and ſervants, may go armed or unarmed; but if armed, not above forty in company, as well without their goods and merchandizes as with them, whereſoever they pleaſe. The people alſo and inhabitants of the United Provinces ſhall enjoy the ſame liberty and freedom in all the dominions of the ſaid King in Europe; provided that they and every of them do, in their trade and merchandizing, yield obedience to the laws and ſtatutes of either nation reſpectively.

XXV. That in caſe the merchant-ſhips of the ſubjects of either nation ſhall by ſtorm, pirates, or any other neceſſity whatſoever, be driven into any haven of either dominion, they may depart ſecurely at their pleaſure, with their ſhips and goods, without paying any cuſtoms or other duties; provided they break no bulk, nor ſell any thing: and they ſhall not be ſubject to any moleſtation or ſearch, provided they don't receive on board any perſons or goods, nor do any thing elſe contrary to the laws, ordinances, or cuſtoms of the places, where they, as aforeſaid, ſhall happen to arrive.

XXVI. That the merchants, maſters of veſſels, and ſeamen, of either party, their ſhips, goods, wares, or merchandizes, ſhall not be arreſted or ſeized in the lands, havens, roads, or rivers of the other, to ſerve at war, or any other uſe, by virtue of any general or ſpecial command; unleſs upon an extraordinary neceſſity, and that juſt ſatisfaction be given for the ſame; but ſo as the ſame ſhall not derogate from the ſeiſures and arreſts duly made in the ordinary courts of juſtice of either nation.

XXVII. That the merchants on both ſides, their factors and ſervants, and alſo the maſters of ſhips and other ſeamen, as well going as returning by ſea and other waters, as alſo in the havens of either party, or going on ſhore, may carry and uſe, for the defence of themſelves and goods, all ſorts of weapons, as well offenſive as defenſive; but, being come into their lodgings or inns, they ſhall there lay by, and leave their arms, until they are going on board again.

XXVIII. That the men of war, or convoys of either nation, meeting or overtaking at ſea any merchant-ſhip or ſhips, belonging to the ſubjects or inhabitants of the other, holding the ſame courſe, or going the ſame way, ſhall be bound as long as they keep one courſe together, to protect and defend them againſt all and every one who would ſet upon them.

XXIX. That if any ſhip or ſhips of the ſubjects or inhabitants of either nation, or of a neuter, be taken by a third party in the harbours of either, not being a ſubject or inhabitant of either nation, they, in or out of whoſe haven or juriſdiction the ſaid ſhips ſhall be taken, ſhall be bound to endeavour with the other party, that the ſaid ſhip or ſhips be purſued, brought back, and reſtored to the owners; but all this ſhall be done at the charges of the owners, or whom it concerns.

XXX. That ſearchers, and other like officers, on both ſides, ſhall regulate themſelves according to the laws of either nation, and ſhall not impoſe or demand more than they are allowed by their commiſſions or inſtructions.

XXXI. That if any injury be done by either nation, or the ſubjects or inhabitants of the ſame, againſt the ſubjects or inhabitants of the other, or againſt any of the articles of this preſent treaty, or againſt common right; yet nevertheleſs, no letters of repriſal, marque, or countermarque, ſhall be granted by either ſide, till juſtice has been firſt demanded according to the ordinary courſe of law; but, in caſe juſtice be there denied or delayed, then the ſaid King of Great Britain, and the ſaid States General, or commiſſioners of that nation whoſe ſubjects or inhabitants have ſuffered the wrong, ſhall publicly require juſtice from the other party, where it was ſo denied or delayed, or from that power appointed to hear and decide ſuch difference, that there may be a friendly compoſure, or due proceſs at law: but, if ſtill there happen more delays, and neither juſtice be adminiſtred, nor ſatisfaction given, within three months after ſuch demand, that then letters of repriſal, marque, or countermarque, may be granted.

XXXII. It is alſo agreed, If at any time it happen, that the difference now compoſed between his ſaid majeſty and the States General, ſhould feſter, and break out again in open war; that then thoſe ſhips, merchandizes, or any kind of moveables of either party, which ſhall be found to be and remain in the ports, and under the command of the adverſe party on either ſide, ſhall not be confiſcated, or made obnoxious to any inconvenience; but the ſpace of ſix months ſhall be allowed to the ſubjects and inhabitants of either party, that they may have leiſure to tranſport from thence the aforementioned things, and any thing elſe that is theirs, whither they ſhall think fit, without any kind of moleſtation.

XXXIII. That they who have obtained private commiſſions from either party, before they receive ſuch commiſſions, ſhall give good and ſufficient ſecurity before the judge of the court where they receive their commiſſions, &c. that they ſhall do no damage or injury to the ſubjects or inhabitants of either ſide.

XXXIV. It is alſo agreed and concluded, that the ſubjects and inhabitants of either party ſhall always have free acceſs to each other's ſea-ports, there to remain, and from thence to depart with the ſame freedom; and not only with their merchant-ſhips and lading, but alſo with their men of war, whether they belong to the ſaid King or States General, or unto ſuch as have obtained private commiſſions, whether they arrive thro' violence or tempeſt, or other caſualty of the ſeas, or to mend their ſhips, or to buy proviſion; ſo they exceed not the number of eight men of war, when they come there voluntarily, nor remain or abide longer in the havens or places adjacent, than they ſhall have a juſt cauſe to repair their ſaid

ſhips, or to buy victuals or other neceſſaries: and if a greater number of men of war ſhould, upon occaſion, deſire to come into ſuch ports, they ſhall in no caſe enter thereinto, until they have firſt obtained leave from thoſe to whom the ſaid havens do appertain, unleſs they be forced ſo to do by ſtorm, or ſome other neceſſity, to avoid the danger of the ſea: in which caſe alſo, they ſhall preſently make known the cauſe of their coming unto the governor or chief magiſtrate of the place, and ſhall ſtay no longer than ſuch governor or chief magiſtrate ſhall permit them; and ſhall not do any acts of hoſtility, or other prejudice in the aforeſaid havens, during their abode there.

Articles touching navigation and commerce, betwen King Charles *the II. and the* States General *of the* United Netherlands, *concluded at the* Hague, *the 7th of* Feb. 1667-8.

I. All the ſubjects and inhabitants of Great Britain may, with all ſafety and freedom, ſail and traffic in all the kingdoms, countries and eſtates, which are or ſhall be in peace, amity, or neutrality with Great Britain, without being troubled or diſquieted in that liberty by the ſhips of war, gallies, frigates, barques, or other veſſels belonging to the States General, or any of their ſubjects, upon occaſion and account of any hoſtilities which may hereafter happen between the States General, and the aboveſaid kingdoms, countries and eſtates, or any of them, which are or ſhall be in peace, amity, or neutrality with Great Britain.

II. This freedom of navigation and traffic, ſhall extend to all ſorts of merchandize, except thoſe of contraband.

III. This term of contraband goods is underſtood to comprehend only all ſorts of fire-arms, and their appurtenances; as cannon, muſquets, mortar-pieces, petards, reſts, bandaliers, powder, match, ſaltpetre, bullets, pikes, ſwords, morions, head-pieces, coats of mail, halberts, javelins, horſes, great ſaddles, holſters, belts, and other utenſils of war, called in French *Aſſortiſſemens ſervant à l'Uſage de la Guerre.*

IV. In this quality of contraband, theſe following ſhall not be comprehended; corn, wheat, or other grain, and pulſe; oils, wines, ſalt, or generally any thing that belongs to the nouriſhment and ſuſtenance of life; but they ſhall remain free, as other merchandize and commodities not comprehended in the precedent article; and the tranſportation of them ſhall be permitted even unto places in enmity with the States General, except ſuch cities and places as are beſieged, blocked up, or inveſted.

V. It has been agreed, for the due execution of what is aboveſaid, That the ſhips and barques of the Engliſh, laden with merchandize, being entered into any port of the ſaid States General, and purpoſing to paſs from thence to the ports of the enemies, ſhall be only obliged to ſhew unto the officers of the port of the ſaid States, out of which they would go, their paſſports, containing the ſpecification of the lading of their ſhips, atteſted and marked with the ordinary ſeal of the officers of the admiralty of thoſe places from whence they firſt came, whither they are bound, all in uſual and accuſtomed form; after which ſhewing of their paſſports in the form aforeſaid, they may not be diſquieted, nor ſearched, detained or retarded in their voyages, upon any pretence whatſoever.

VI. The ſame courſe ſhall be uſed, in regard of the Engliſh ſhips and veſſels which ſhall come into any roads of the countries under the obedience of the ſaid States, not intending to enter into the ports, or being entered thereinto, not to unlade and break bulk; which ſhips may not be obliged to give an account of their ladings, but in caſe of ſuſpicion that they carry unto the enemies of the ſaid States any contraband goods as aforeſaid.

VII. And in caſe of any ſuch apparent ſuſpicion, the ſaid ſubjects of his Majeſty ſhall be obliged to ſhew, in the ports, their paſſports in the form ſpecified.

VIII. But if they were come within the roads, or were met in the open ſea by any of the ſaid States ſhips, or private men of war, of their ſubjects; for avoiding of all diſorder, the ſaid ſhips of the United Provinces, or their ſubjects, ſhall not come near within cannon-ſhot of the Engliſh, but ſhall ſend out their long-boat, and cauſe only two or three men to go on board the Engliſh ſhips or veſſels, unto whom the paſſports and certificates of the propriety of the ſhips, ſhall be ſhewn by the maſter or captain of the Engliſh ſhip, in the manner above ſpecied, according to the form of the ſaid certificates, which ſhall be inſerted at the end of this treaty; by which paſſport and certificate proof may be made, not only of the lading, but alſo of the place of abode and reſidence of the maſter or captain, and name of the ſhip itſelf; to the end, that, by theſe two ways, it may be known whether they carry contraband goods, and that the quality as well of the ſaid ſhip, as of its maſter or captain, may ſufficiently appear; unto which paſſports and certificates entire faith and credit ſhall be given. And to the end their validity may be the better known, and that they may not be in any ways falſified and counterfeit, certain marks and counter-ſigns of his Majeſty and the States General ſhall be given unto them.

IX. And in caſe any merchandize and commodities of thoſe kinds, which are before declared to be contraband and forbidden, ſhall by the means aforeſaid, be found in the Engliſh ſhips or veſſels, bound for the ports of the ſaid States enemies, they ſhall be unladen, judicially proceeded againſt, and declared confiſcate before the judges of the admiralty of the United Provinces, or other competent officers; but ſo that the ſhip and veſſel, or other freed or allowed goods, merchandiſe, and commodities found in the ſaid ſhip, may not for that cauſe be in any manner ſeized or confiſcated.

X. It is further agreed and covenanted, That whatſoever ſhall be found laden by his Majeſty's ſubjects, upon any ſhip of the enemies of the ſaid States, altho' the ſame were not contraband goods, ſhall yet be confiſcate, with all that ſhall be found in the ſaid ſhip, without exception or reſervation: but on the other ſide alſo, all that ſhall be found in the ſhips belonging to the King of Great Britain's ſubjects, ſhall be free and diſcharged, altho' the lading or part thereof, belong to the ſaid States enemies, except contraband goods; in regard whereof ſuch rule ſhall be obſerved, as has been ordered in the precedent articles.

XI. All the ſubjects and inhabitants of the ſaid United Provinces, ſhall reciprocally enjoy the ſame rights, liberties, and exemptions, in their trade and commerce, upon the coaſts, and in the ports, roads, ſeas, and eſtates of his ſaid Majeſty, which his Majeſty's ſubjects ſhall enjoy in thoſe of the ſaid States, and in open ſea; it being to be underſtood, that the equality ſhall be mutual every way on both ſides, even in caſe the ſaid States ſhould hereafter be in peace, amity, and neutrality, with any kings, princes, and ſtates, who ſhould become enemies to his ſaid Majeſty; ſo that either of the parties are mutually to uſe the ſame conditions and reſtrictions, expreſſed in the articles of this preſent treaty, with regard to trade and commerce.

XII. And the more to aſſure the ſubjects of the ſaid States, that no violence ſhall be offered them by the ſhips of war belonging to his Majeſty of Great Britain, or his ſubjects, all the captains of the King's ſhips, and all his Majeſty's ſubjects that ſend out private men of war, ſhall be charged and enjoined not to moleſt or endamage them in any thing whatſoever, upon pain of being puniſhed, and made anſwerable, in their perſons and goods, for all coſts and damages, until due reſtitution and reparation be made.

XIII. And for this cauſe, the captains of privateers and capers ſhall from henceforth every one of them be obliged, before they go out, to give good and ſufficient ſecurity, before competent judges, in the ſum of fifteen hundred pounds, &c. that they will make full ſatisfaction for any injuries or wrongs they may commit in their courſes at ſea, and for their officers under them, that ſhall violate this preſent treaty, and the orders and proclamations of his Majeſty, which ſhall be publiſhed by virtue and in conformity to the regulation therein made; and upon pain of forfeiting their ſaid commiſſions and licences: which ſhall in like manner be practiſed by the ſubjects of the ſaid States General.

XIV. If it ſhould happen, that any of the ſaid captains ſhould make prize of veſſels laden with contraband goods,

goods, the ſaid captains may not open the cheſts, mails, packs, bags, or caſks; or ſell, exchange, or otherways alienate them, until they have landed the ſame in the preſence of the judges or officers of the admiralty, and an inventory is by them made of the ſaid goods found in the ſaid veſſels; unleſs the contraband goods making but a part of the lading, the maſter of the ſhip ſhould be content to deliver the ſaid contraband goods unto the ſaid captain, and to purſue his voyage; in which caſe, the ſaid maſter ſhall by no means be hindered from continuing his courſe and the deſign of his voyage.

XV. His Majeſty being deſirous that the ſubjects of the ſaid States may be uſed, in all countries under his obedience, as favourably as his own ſubjects, will give all neceſſary orders, that judgments and decrees upon prizes, which ſhall happen to be taken at ſea, may be given with all juſtice and equity, by judges not ſuſpected or concerned in the matter under debate; and his Majeſty will give preciſe and effectual orders, that all decrees, judgments, and orders of juſtice, already given and to be given, may be readily and duly executed according to the tenor of the ſame.

XVI. And when the ambaſſadors of the ſaid States General, or any other of their public miniſters reſiding in his Majeſty's court, ſhall make complaint of the judgments which ſhall be given, his Majeſty will cauſe a review to be made of the ſaid judgments in his council, to examine whether the order and precautions contained in the preſent treaty have been followed and obſerved, and to provide for the ſame according to right and equity; which ſhall be done within the ſpace of three months at the fartheſt: nevertheleſs neither before the firſt judgment nor after it, during the time of the review, the goods and effects which are reclaimed, may not be ſold or unladed, unleſs it be with the conſent of the parties intereſted, to avoid the ſpoiling of the ſaid commodities, if they be periſhable.

XVII. When proceſs ſhall be moved in the firſt or ſecond inſtance, between thoſe that have taken the prizes at ſea, and the perſons intereſted therein, and the ſaid intereſted perſons ſhall come to obtain a favourable judgment or decree, the ſaid judgment or decree ſhall have its execution upon ſecurity given, notwithſtanding the appeal of him that took the prize; but the ſame ſhall not hold on the contrary where the ſentence goes againſt the claimers. And that which is ſaid in this preſent and in the precedent articles, for the cauſing of good and ſpeedy juſtice to be done unto the ſubjects of the United Provinces, in the matter of prizes taken at ſea by his Majeſty's ſubjects, ſhall be underſtood and practiſed by the States General, in regard of prizes taken by their ſubjects from thoſe of his Majeſty.

XVIII. But ſince the conveniencies and inconveniencies of things and agreements cannot be diſcovered but in procedure of time, and by obſervations drawn from mutual experience; it is therefore agreed between the ſaid King of Great Britain and the ſaid Lords, the States of the United Netherlands, That at any time hereafter, when both parties ſhall ſo think it fitting, certain commiſſioners, by each party reſpectively choſen, ſhall meet by the common conſent of both; who ſhall make it their care and buſineſs to ſupply whatever ſhall be found wanting in the aforementioned articles, to change or limit what ſhall not be convenient and commodious for both, and fully to compleat a farther treaty, both concerning theſe things, and all other the laws of navigation.

A treaty marine, between King Charles *the II. and the Lords the* States General *of the* United Netherlands, *concluded at* London, *the firſt day of* December 1674.

I. That it ſhall be lawful for all and every the ſubjects of the moſt ſerene and mighty prince, the King of Great Britain, with all freedom and ſafety to ſail, trade, and exerciſe any manner of traffic in all thoſe kingdoms, countries, and eſtates which are, or at any time hereafter ſhall be in peace, amity, or neutrality with his ſaid Majeſty; ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade, by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the high and mighty lords the States General of the United Netherlands, or to their ſubjects, upon occaſion or pretence of any hoſtility or difference which now is, or hereafter ſhall happen between the ſaid lords the States General, and any princes or people whatſoever, in peace, amity or neutrality with his ſaid Majeſty: and likewiſe, That it ſhall and may be lawful for all and every the ſubjects of the ſaid lords the States General of the United Netherlands, with all freedom and ſafety to ſail, trade and exerciſe in any manner of traffic in all thoſe kingdoms, countries and eſtates which are, or at any time hereafter ſhall be in peace, amity, or neutrality with the aforeſaid lords the States; ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade, by the military forces, or by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the moſt ſerene and mighty King above mentioned, of to his ſubjects, upon occaſion or pretence of any hoſtility or difference, which now is, or ſhall hereafter happen between his ſaid Majeſty and any princes or people whatſoever in peace, amity, or neutrality with the ſaid lords the States.

II. Nor ſhall this freedom of navigation and commerce be infringed by occaſion or cauſe of any war, in any kind of merchandizes, but ſhall extend to all commodities that ſhall be carried in time of peace; thoſe only excepted which follow in the next article, and are comprehended under the name of contraband.

III. Under this name contraband or prohibited merchandizes, ſhall be comprehended only arms, pieces of ordnance, with all implements belonging to them, fire-balls, powder, match, bullets, pikes, ſwords, lances, ſpears, halberts, guns, mortar-pieces, petards, granadoes, muſquet-reſts, bandaliers, ſaltpetre, muſquets, muſquet-ſhot, helmets, corſlets, breaſt-plates, coats of mail, and the like kind of armature, ſoldiers, horſes, and all things neceſſary for the furniture of horſes, holſters, belts, and all other warlike inſtruments whatſoever.

IV. Theſe merchandizes following ſhall not be reckoned among prohibited Goods, viz. All kind of cloth, and all other manufactures woven of any kinds of wool, flax, ſilk, cotton, or any other materials; all ſorts of cloathing and veſtments, together with the materials whereof they uſe to be made; gold and ſilver, as well coined as not coined; tin, iron, lead, copper, and coals; as alſo wheat, barley, and all other kinds of corn or pulſe; tobacco, and all kinds of ſpices, ſalted and ſmoaked fleſh, ſalted and dried fiſh, butter and cheeſe, beer, oils, wines, ſugars, and all ſorts of ſalt, and in general, all proviſion which ſerves for the nouriſhment and ſuſtenance of life; likewiſe all kinds of cotton, hemp, flax, and pitch; and ropes, ſails, and anchors; alſo maſts and planks, boards and beams of wood of what ſort ſoever; and all other materials requiſite for the building or repairing ſhips, but they ſhall be wholly reputed among free goods; even as all other wares and commodities which are not comprehended in the precedent article; ſo that the ſame may be freely tranſported and carried by the ſubjects of his ſaid Majeſty, even unto places in enmity with the ſaid States, as alſo on the other ſide, by the ſubjects of the ſaid States, to places under the obedience of the enemies of his ſaid Majeſty; except only towns or places beſieged, environed, or inveſted.

V. And that all manner of differences and contentions on both ſides, by ſea and land, may ceaſe and be utterly extinguiſhed; it is agreed, That all kinds of ſhips and veſſels whatſoever, belonging to the ſubjects of his ſaid Majeſty, entering or being entered into any road or port under the obedience of the lords the States, and purpoſing to paſs from thence, ſhall be only obliged to ſhew unto the officers acting in the ports of the ſaid States, or to the captains of the States ſhips, or of private men of war, if any happen there to be, their paſſport, commonly called a ſea-brief, in the form directed, nor ſhall any money, or any thing elſe be exacted from them under that pretence. But if any ſhip belonging to the ſubjects of his Majeſty of Great Britain, ſhall, in the open ſea, or elſewhere out

of the dominions of the ſaid States, meet the ſhips of war of the ſaid lords the States, or private men of war of their ſubjects, the ſaid ſhips of the lords the States, or of their ſubjects, ſhall keep at a convenient diſtance, and ſend out their boat, and it ſhall be lawful for them only with two or three men, to go on board the ſhips and veſſels of the ſubjects of his Majeſty, that the paſſport, or ſea-brief, of the propriety thereof according to the form herein ſpecified, may be ſhewn to them by the captain or maſter of ſuch ſhip or veſſel belonging to the ſubjects of his Majeſty; and the ſhip which ſhall ſhew the ſame ſhall freely paſs, and it ſhall not be lawful to moleſt, ſearch, detain or divert the ſame from her intended voyage: and all the ſubjects of the lords the States ſhall enjoy in all things, the ſame liberty and immunity, they, in like manner, ſhewing the paſſports, or ſea-briefs, made according to the form preſcribed at the end of this treaty.

VI. But if any ſhip or veſſel belonging to the Engliſh, or other ſubjects of his Majeſty, ſhall be met making into any port in enmity with the lords the States; or on the other ſide, if any ſhip belonging to the United Provinces of the Netherlands, or other ſubjects of the States, ſhall be met in her way making into any port under the obedience of the enemies of his ſaid Majeſty, ſuch ſhip ſhall ſhew not only a paſſport, or ſea-brief, according to the form preſcribed, wherewith ſhe is to be furniſhed, but alſo her cocquets expreſſing the contents of the goods on board, given in the uſual form, by the officers of the cuſtoms in the port from whence ſhe came; whereby it may be known whether ſhe is laden with any merchandizes prohibited by the third article of this treaty.

VII. But if by the ſhewing the aboveſaid cocquets expreſſing the contents of the goods on board, ſo given in uſual form by the ſaid officers of the cuſtoms in the port from whence ſhe came, concerning the ſhewing whereof it is above agreed, either party ſhall diſcover any kind of merchandizes, which in the third article of this treaty are declared to be contraband or prohibited, conſigned to any port under the obedience of their enemies, it ſhall not be lawful to open the hatches of ſuch ſhip in which the ſame ſhall happen to be found, whether ſhe belongs to the ſubjects of his Majeſty, or of the lords the States; nor to unlock, or break open cheſts, mails, packs, or caſks in the ſame, nor to convey away the leaſt part of the merchandizes, before the whole be firſt landed in the preſence of the officers of the admiralty, and inventoried; neither ſhall it be any ways lawful to ſell, exchange, or otherwiſe to alienate the ſame, until ſuch prohibited goods, are rightfully and lawfully proceeded againſt, and that the judges of the admiralty have, by their reſpective ſentences, confiſcated the ſame. Provided always, That as well the ſhip itſelf, as the reſt of the commodities found in the ſame, which by this treaty are to be reputed free, ſhall not, upon pretence of their being infected by ſuch prohibited goods, be detained, much leſs confiſcated, for lawful prize: and if not the whole, but a part only of the lading conſiſt of contraband or prohibited commodities, and the maſter of the ſhip ſhall be willing and ready to deliver them to the captor who ſeized the ſame, in that caſe, the captor ſhall not compel the ſhip to go out of her courſe, to any port he thinks fit, but ſhall forthwith diſmiſs ber, and upon no account hinder her from freely proſecuting her deſigned voyage.

VIII. It is further agreed, That whatſoever ſhall be found laden by his Majeſty's ſubjects, upon any ſhip belonging to the enemies of the lords the States, altho' the ſame be not of the quality of contraband goods, may be confiſcated; but on the contrary, all that which ſhall be found in the ſhips belonging to the ſubjects of his Majeſty, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of propriety ſhall belong to the enemies of the ſaid lords the States, except always contraband goods, which being intercepted, all things ſhall be done therein according to the meaning and direction of the precedent articles; and, by the ſame reaſon, whatſoever ſhall be laden by the ſubjects of the lords the States, in any ſhip belonging to the enemies of his Majeſty, although the ſame be not of the quality of contraband goods, may be confiſcated: but, on the other ſide, all that which ſhall be found in the ſhips belonging to the ſubjects of the lords the States, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of propriety, ſhall belong to the enemies of his ſaid Majeſty, except always contraband goods, which being intercepted, all things ſhall be done according to the meaning and directions of the precedent articles. And leſt any damage ſhould by ſurprize be done to the one party who is in peace, when the other party ſhall happen to be engaged in war; it is provided and agreed, That a ſhip belonging to the enemies of the one party, and laden with goods of the ſubjects of the other party, ſhall not infect or render the goods liable to confiſcation, in caſe they were laden before the expiration of the terms and times hereafter mentioned, after the declaration or publication of any ſuch war, viz. If the goods were laden in any port or place between the places or limits called the Soundings and the Naz in Norway, within the ſpace of ſix weeks after ſuch declaration; of two months between the ſaid place, the Soundings, and the city of Tangier; and ten weeks in the Mediterranean ſea; or within the ſpace of eight months in any other country or place of the world. So that it ſhall not be lawful to confiſcate the goods of the ſubjects of his majeſty, taken or ſeized in any ſhip or veſſel whatſoever, of any enemy of the lords the States, upon that pretence, but the ſame ſhall be without delay reſtored to the proprietors, unleſs they were laden after the expiration of the ſaid terms of time reſpectively: but ſo, that it may not be lawful for them afterwards to carry to enemies ports, the ſaid merchandizes which are called contraband, and for the reaſon aforeſaid, ſhall not be liable to confiſcation: neither on the other ſide, ſhall it be lawful to confiſcate goods of the ſubjects of the lords the States, taken or ſeized in any ſhip or veſſel whatſoever of an enemy of his Majeſty, upon that pretence; but the ſame ſhall be forthwith reſtored to the proprietors thereof, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo, that it may not be lawful for them afterwards to carry to enemies ports, the ſaid merchandizes that are called contraband, and for the reaſon aforeſaid, ſhall not be liable to confiſcation.

IX. And the more to aſſure the ſubjects of his Majeſty, and of the ſaid States, that no injury ſhall be offered to them by the ſhips of war, or private men of war of either ſide, all the captains of the ſhips, as well of his Majeſty as of the ſaid States, and all their ſubjects who ſhall ſet out private men of war, and likewiſe their privileged companies, ſhall be enjoined not to do any injury or damage whatſoever to the other; which if they do, they ſhall be puniſhed, and moreover be liable to ſatisfy all coſts and damages, by reſtitution and reparation, upon pain and obligation of perſon and goods.

X. For this cauſe, all the commanders of private men of war, ſhall from henceforth be obliged, before they receive their commiſſions, to enter before a competent judge, good and ſufficient ſecurity by able and reſponſible men, who have no part or intereſt in ſuch ſhip, in the ſum of fifteen hundred pounds ſterling, or ſixteen thouſand five hundred gilders; and when they have above one hundred and fifty men, then in the ſum of three thouſand pounds pounds ſterling, or three and thirty thouſand gilders; that they will give full ſatisfaction for any damages or injuries whatſoever, which they or their officers, or others in the ſervice, ſhall commit in their courſes at ſea, contrary to this preſent treaty, or any other whatſoever, between his Majeſty and the ſaid States, and upon pain of revocation and annulling their ſaid commiſſions; in which it ſhall be always inſerted, that they have given ſuch ſecurity as aforeſaid: and likeways it is agreed, That the ſhip itſelf ſhall be alſo liable to make ſatisfaction for injuries and damages done by her.

XI. His Majeſty and the ſaid States, being deſirous that the ſubjects of each other may be mutually treated in all countries under their obedience reſpectively, with the like kindneſs

kindneſs as their own ſubjects, will give all neceſſary and effectual orders, that the judgments upon prizes taken be given according to the rule of juſtice and equity, by judges beyond all ſuſpicion, and not any way concerned in the cauſe under debate; and his Majeſty and the ſaid States will likewiſe give ſtrict orders that all ſentences already given, and which ſhall be hereafter given, be, according to the tenor thereof, duly put in execution, and obtain their effect.

XII. And whenſoever the ambaſſadors of the lords the States, or any other their publick miniſters, reſident at the court of his moſt ſerene Majeſty of Great Britain, ſhall complain of the unjuſtneſs of ſentences which have been given, his Majeſty will cauſe the ſame to be reviewed and examined in his council, that it may appear whether the orders and precautions preſcribed in this treaty have been obſerved, and have had their due effect; and will alſo take care that the ſame be fully provided for, and that right be done to the party complaining, within the ſpace of three months: and likewiſe when the ambaſſadors, or other public miniſters of his Majeſty, reſident with the States, ſhall complain of the unjuſtneſs of ſentences, the ſaid States will cauſe a review and examination thereof to be made in the aſſembly of the States General, that it may appear whether the orders and precautions preſcribed in this treaty, have been obſerved, and have had their due effect; and they will likewiſe take care that the ſame be fully provided for, and that right be done the party complaining, within the ſpace of three months. Nevertheleſs, it ſhall not any ways be lawful to ſell or unlade the goods in controverſy, either before the ſentence given, or after it, during the review thereof on either ſide, unleſs it be with the conſent of the perſons intereſted.

XIII. A ſuit being commenced between the takers of prizes on the one part, and the claimers thereof on the other, and a ſentence or decree being given for the party reclaiming; the ſaid ſentence or decree, upon ſecurity given, ſhall be put in execution, notwithſtanding the appeal made by him that took the prize, which ſhall not be obſerved, in caſe the ſentence ſhould be given againſt the claimers.

XIV. And whereas the maſters of merchant ſhips, and likewiſe the mariners and paſſengers, ſometimes ſuffer many cruelties and barbarous uſages, when they are brought under the power of ſhips which take prizes in time of war, the takers in an inhuman manner tormenting them, thereby to extort from them ſuch confeſſions as they would have to be made: it is agreed, That both his Majeſty, and the lords the States General, ſhall, by the ſevereſt proclamations or placarts, forbid all ſuch heinous and inhuman offences; and as many as they ſhall by lawful proofs find guilty of ſuch acts, they ſhall take care that they be puniſhed with due and juſt puniſhments, and which may be a terror to others; and ſhall command, that all the captains and officers of ſhips, who ſhall be proved to have committed ſuch heinous practices, either themſelves, or by inſtigating others to act the ſame, or by conniving while they were done, ſhall, beſides other puniſhments to be inflicted proportionably to their offences, be forthwith deprived of their offices reſpectively: and every ſhip brought up as prize, whoſe mariners or paſſengers ſhall have ſuffered any torture, ſhall forthwith be diſmiſſed and freed, with all her lading, from all further examination and proceeding againſt her, as well judicial as otherways.

XV. It is alſo agreed, that the like ſeverity of puniſhments ſhall be inflicted upon thoſe, who contrary to the one and twentieth article of the treaty of peace, concluded at Breda, ſhall take commiſſions from enemies, to ſeize the ſhips of either ally or party, contrary to what is provided in the ſaid article.

As the articles foregoing theſe, touching navigation and commerce, between his Majeſty and the States, were concluded for their reſpective dominions in Europe; ſo it here appears, that this treaty of marine, was agreed to for regulating their naval affairs all over the world: and after the concluſion of this treaty with Holland, another of the like nature was made with France, which is proper to be inſerted; whereby the reader may ſee th intereſts and advantages of both countries are much the ſame.

A marine treaty between King Charles *the II. and* Lewis *the XIV. the moſt Chriſtian King, concluded at* St. Germains en Laye, *the 24th day of* Feb. 1676-7.

I. That it ſhall and may be lawful for all and every the ſubjects of the moſt ſerene and mighty prince the King of Great Britain aforeſaid, with all freedom and ſafety to ſail, trade, and exerciſe any manner of traffick in all thoſe kingdoms, countries, and eſtates, which are, or at any time hereafter ſhall be in peace, amity, or neutrality with his ſaid Majeſty; ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade, by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the moſt Chriſtian King, or to his ſubjects, upon occaſion or pretence of any hoſtility or difference which now is, or hereafter ſhall happen between the ſaid moſt Chriſtian King, and any princes or people whatſoever, in peace, amity, or neutrality, with the ſaid King of Great Britain; and likewiſe, that it ſhall and may belawful for all and every the ſubjects of the ſaid moſt Chriſtian King, with all freedom and ſafety to ſail, trade, and exerciſe any manner of traffick in all thoſe kingdoms, countries, and eſtates, which are, or at any time hereafter ſhall be in peace, amity, or neutrality, with the aforeſaid moſt Chriſtian King; ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade, by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the King of Great Britain abovementioned, or to his ſubjects, upon occaſion or pretence of any hoſtility or difference which now is, or ſhall hereafter happen between his Majeſty, and any princes or people whatſoever, in peace, amity, or neutrality, with the ſaid moſt Chriſtian King.

II. Nor ſhall this freedom of navigation and commerce be infringed, by occaſion or cauſe of any war, in any kind of merchandiſes; but ſhall extend to all commodities which ſhall be carried in time of peace; thoſe only excepted, which follow in the next article, and are comprehended under the name of contraband.

III. Under this name of contraband, or prohibited merchandiſes, ſhall be comprehended only arms, pieces of ordnance, with all implements belonging to them, fireballs, powder, bullets, pikes, ſwords, lances, ſpears, halberts, guns, mortar-pieces, petards, grenadoes, muſquetreſts, bandeliers, ſaltpetre, muſquets, muſquet-ſhot, helmets, corſlets, breaſt-plates, coats of mail, and the like kind of armature, ſoldiers, horſes, and all things neceſſary for the furniſhing of horſes, holſters, belts, and all other warlike inſtruments whatſoever.

IV. Theſe merchandiſes following ſhall not be reckoned among prohibited goods, *viz.* all kind of cloth, and all other manufactures woven of any kind of wool, flax, ſilk, cotton, or any other materials; all ſorts of clothing and veſtments, together with the materials whereof they are made; gold and ſilver, as well coined as not coined, tin, iron, lead, copper, and coals; alſo wheat and barley, and all other kind of corn or pulſe; tobacco, and all kind of ſpices; ſalted and ſmoaked fleſh, ſalted and dried fiſh, cheeſe, butter, beer, oils, wines, ſugars, and all ſorts of ſalt; and in general, all proviſion which ſerves for the nouriſhment and ſuſtenance of life; likewiſe all kind of cotton, hemp, flax, and pitch; ropes, ſails, and anchors, maſts and planks, boards and beams of what ſort of wood ſoever, and all other materials requiſite for the building or repairing ſhips; but they ſhall be wholly reputed amongſt free goods, as well as all other wares and commodities which are not comprehended in the next precedent article; ſo that the ſame may be freely tranſported and carried by the ſubjects of the moſt ſerene King of Great Britain, not only from one neutral place to another neutral place, or from a neutral port or place

to

to a place in hoſtility with the moſt Chriſtian King, or from any place in hoſtility with him to a neutral place; but alſo from one place in enmity with the ſaid moſt Chriſtian king, to another port or place in enmity with him; be it that ſuch ports or places do belong to the ſame prince or ſtate, or to ſeveral princes or ſtates with whom the moſt Chriſtian King ſhall happen to be in war: and in like manner, that the ſame may be freely tranſported by the ſubjects of the moſt Chriſtian King, not only from one neutral place, to another ſuch place, or from a neutral port or place, to a place in hoſtility with the King of Great Britain, or from a place in hoſtility with him, to a neutral place; but alſo from one place in enmity with the King of Great Britain, to another port or place in enmity with him; be it that ſuch ports or places do belong to the ſame prince or ſtate, or to ſeveral princes or ſtates, with whom the King of Great Britain ſhall happen to be in war; except only towns or places beſieged, invironed, or inveſted, in French, *Blocquees ou Inveſties.*

V. And that all manner of differences and contentions on both ſides, by ſea and land, may from henceforth ceaſe, and be utterly extinguiſhed; it is agreed, that all kind of ſhips and veſſels whatſoever, belonging to the ſubjects of his ſaid Majeſty of Great Britain, entering or being entered into any road or port under the obedience of the moſt Chriſtian King, and purpoſing to paſs from thence, ſhall be only obliged to ſhew unto the officers acting in the ports of the ſaid moſt Chriſtian King, or to the captains of the moſt Chriſtian King's ſhips, or private men of war, if any happen there to be, their paſſport, commonly called a ſea-brief; nor ſhall any money, or any thing elſe be exacted from them under that pretence: but if any ſhip, belonging to the ſubjects of his Majeſty of Great Britain, ſhall, in the open ſea, or elſewhere, out of the dominions of the moſt Chriſtian King, meet the ſhips of war of the moſt Chriſtian King, or private Men of war of his ſubjects, the ſaid ſhips of the ſaid moſt Chriſtian King ſhall keep at a diſtance, and only ſend out their boat; and it ſhall be lawful for them only, with two or three men, to go on board the ſhips and veſſels of the ſubjects of his Majeſty of Great Britain, that the paſſport, or ſea-brief, of the propriety thereof may be ſhewn to them by the captain or maſter of ſuch ſhip or veſſel, belonging to the ſubjects of his ſaid Majeſty of Great Britain; and the ſhip which ſhall ſhew the ſame, ſhall freely paſs: and it ſhall not be lawful to moleſt, ſearch, detain, or divert the ſaid ſhip from her intended voyage. And all the ſubjects of the moſt Chriſtian King ſhall enjoy, in all things, the ſame liberty and immunity, they, in like manner, ſhewing their paſſport or ſea-brief.

VI. But if any ſhip or veſſel belonging to the Engliſh, or other ſubjects of his Majeſty of Great Britain, ſhall be met by any man of war making into any port in enmity with the moſt Chriſtian King; or on the other ſide, if any ſhip belonging to the moſt Chriſtian King, or other ſubjects of the ſaid moſt Chriſtian King, ſhall be met in her way making into any port under the obedience of the enemies of his ſaid Majeſty of Great Britain, ſuch ſhip ſhall ſhew not only a paſſport or ſea-brief, wherewith ſhe is to be furniſhed, but alſo her cocquets, expreſſing the contents of the goods on board, given in the uſual form, by the officers of the cuſtoms in the port from whence ſhe came; whereby it may be known, whether ſhe is laden with any merchandiſes prohibited by the third article of this treaty.

VII. But if, by ſhewing the aboveſaid cocquets, expreſſing the contents of the goods on board, given in the uſual form by the officers of the cuſtoms in the port from whence ſhe came, concerning the ſhewing whereof it is above agreed, either party ſhall diſcover any kind of merchandiſes, which in the third article of this treaty are declared to be contraband or prohibited, conſigned to any port under the obedience of their enemies, it ſhall not be lawful to open the hatches of ſuch ſhip in which the ſame ſhall happen to be found, whether ſhe belongs to the ſubjects of his Majeſty of Great Britain, or of the moſt Chriſtian King; nor to unlock or break open the cheſts, mails, packs, or caſks in the ſame; nor to convey away any the leaſt part of the merchandiſes, before the whole be firſt landed in the preſence of the officers of the admiralty, and inventoried: neither ſhall it be any ways lawful to ſell, exchange, or otherwiſe to alienate the ſame, until ſuch prohibited goods are rightfully and lawfully proceeded againſt; and that the judges of the admiralty have, by their reſpective ſentences, confiſcated the ſame: provided always, that as well the ſhip itſelf, as the reſt of the commodities found in the ſame, which by this treaty are to be reputed free, ſhall not upon pretence of their being infected by ſuch prohibited goods, be detained, much leſs confiſcated for lawful prize, though if not the whole, but a part only of the lading conſiſts of contraband or prohibited commodities, and that the maſter of the ſhip ſhall be willing and ready to deliver them to the captor, who ſeiſed the ſame; in that caſe, the captor ſhall not compel the ſhip to go out of her courſe, to any port he thinks fit, but ſhall forthwith diſmiſs her, and upon no account hinder her from freely proſecuting her deſigned voyage.

VIII. 'Tis farther agreed, that whatſoever ſhall be found laden by the ſubjects of his Majeſty of Great Britain, upon any ſhip whatſoever belonging to the enemies of the moſt Chriſtian King, although the ſame be not of the quality of contraband goods, may be confiſcated: but, on the contrary, all that which ſhall be found in the ſhips belonging to the ſubjects of his Majeſty of Great Britain, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of property, ſhall belong to the enemies of the moſt Chriſtian King; except contraband goods, which being intercepted, all things ſhall be done according to the meaning and direction of the precedent articles. And, by the ſame reaſon, whatſoever ſhall be found laden by the ſubjects of the moſt Chriſtian King, in any ſhip whatſoever belonging to the enemies of his Majeſty of Great Britain, although the ſame be not of the quality of contraband goods, may be confiſcated: but on the other ſide, all that which ſhall be found in the ſhips belonging to the ſubjects of the moſt Chriſtian King, ſhall be accounted clear and free, altho' the whole lading, or any part thereof, by juſt title of propriety, ſhall belong to the enemies of his Majeſty of Great Britain; except always contraband goods, which being intercepted, all things ſhall be done therein according to the meaning and direction of the precedent articles. And leſt any damage ſhould, by ſurpriſe, be done to the one party who is in peace, when the other party ſhall happen to be engaged in war, it is provided and agreed, that a ſhip belonging to the enemies of the one party, and laden with the goods of the ſubjects of the other party, ſhall not infect, or render the goods liable to confiſcation, in caſe ſuch ſhip were laden before the expiration of the terms and times hereafter mentioned, after the declaration and publication of any ſuch war, viz. If the goods were laden in any port or place, between, &c. within the ſpace of, &c. and between, &c. as in the foregoing treaty with Holland, ſo that it ſhall not be lawful to confiſcate the goods of the ſubjects of his Majeſty of Great Britain, taken or ſeiſed in any ſhip or veſſel whatſoever of any enemy of the moſt Chriſtian King, upon that pretence; but the ſame ſhall be without delay reſtored to the proprietors, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo, that it may not be lawful for them afterwards to carry to enemies ports, the ſaid merchandiſes which are called contraband; and for the reaſon aforeſaid ſhall not be liable to confiſcation: neither, on the other ſide, ſhall it be lawful to confiſcate the goods of the ſubjects of the moſt Chriſtian King, taken or ſeiſed in any ſhip or veſſel whatſoever of an enemy of his Majeſty of Great Britain, upon that pretence; but the ſame ſhall be forthwith reſtored to the proprietors thereof, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo, that it may not be lawful for them afterwards to carry to enemies ports, the ſaid merchandiſes which are called contraband; and for the reaſon aforeſaid ſhall not be liable to confiſcation.

IX.

IX. And the more to assure the subjects of his Majesty of Great Britain, and of the most Christian King, that no injury shall be offered to them by the ships of war, or private men of war, of either side, all the captains of the ships, as well of his Majesty of Great Britain, as of the most Christian King, and all their subjects who shall set out private men of war, and likewise their privileged companies, shall be enjoined not to do any injury or damage whatsoever to the other; which if they do, they shall be punished, and moreover be liable to satisfy all costs and damages, by restitution and reparation, upon pain and obligation of person and goods.

X. For this cause, all the commanders of private men of war shall from henceforth be obliged, before they receive their commissions, to enter before a competent judge good and sufficient security, by able and responsible men, who have no part or interest in such ship, in the sum of 1500 l. sterling, or 16,500 livres; and when they have above 150 men, then in the sum of 3000 l. sterling, &c. that they will give full satisfaction for any damages or injuries whatsoever, which they or their officers, or others in their service, shall commit in their courses at sea, contrary to this present treaty, or any other whatsoever between his Majesty of Great Britain and the said most Christian King, and upon the pain of revocation and annulling their said commissions; in which it shall be always inserted, that they have given such security as aforesaid: and likewise it is agreed, that the ship itself shall be also liable to make satisfaction for injuries and damages done by her.

XI. His Majesty of Great Britain, and the most Christian King, being desirous that the subjects of each other may be mutually treated in all countries under their obedience respectively, with the like kindness as their own subjects, will give all necessary and effectual orders, that judgments upon ships and merchandise taken at sea, be given according to the rule of justice and equity, by judges beyond all suspicion, and not any ways concerned in the cause under debate: and his Majesty of Great Britain, and the Most Christian King, will likewise give strict orders, that all sentences already given, and which shall hereafter be given, be according to the tenor thereof duly put in execution, and obtain their effect.

XII. And whensoever the ambassadors, or other public ministers of the King of Great Britain, residing in the court of the most Christian King, shall complain of the injustness of sentences which have been given concerning ships or merchandise taken at sea, and belonging to the subjects of the King of Great Britain; then the said most Christian King, on demand of the said ambassadors, or ministers of the King of Great Britain, shall cause the said sentences to be reviewed and examined in his privy council, and shall confirm or revoke the sentences so given; and likewise the said most Christian King shall take care that right be done to the party complaining, within the space of four months, to be accounted from the day of making such demand. In like manner, if the ambassadors, or other public ministers of the most Christian King, residing in the court of the King of Great Britain, shall complain of the injustness of sentences which have been given concerning ships or merchandise taken at sea, belonging to subjects of the most Christian King, the said King of Great Britain shall forthwith commissionate under his great seal, nine of his privy council, to adjudge such matters, and to confirm or revoke the sentences wheresoever given: and the said commissioners shall meet within the space of one month, from the day of delivering the complaint; and likewise the King of Great Britain shall take care, that right be done the party complaining, within the space of three months, to be computed from the first day of the meeting of the said commissioners.

XIII. A suit being commenced between the takers of prizes on the one part, and the claimers thereof on the other, and a sentence or decree being given for the party reclaiming, the said sentence or decree, upon security given, shall be put in execution, notwithstanding the appeal made by him that took the prize; which shall not be observed in case the sentence shall be given against the claimers.

XIV. And whereas the masters of merchant-ships, and likewise the mariners and passengers, do sometimes suffer many cruelties and barbarous usages, when they are brought under the power of ships which take prizes in time of war, the takers, in an inhuman manner, tormenting them, thereby to extort from them such confessions as they would have to be made; it is agreed, that both his Majesty of Great Britain, and the most Christian King, shall by the severest proclamations, or edicts, forbid all such heinous and inhuman offences; and as many as they shall by lawful proofs find guilty of such acts, they shall take care that they be punished with due and just punishments, and which may be a terror to others; and shall command, that all captains of ships, &c. who shall be proved to have committed such heinous practices, &c. shall be deprived of their offices; and every ship so brought up as prize, &c. shall be forthwith dismissed, &c.

XV. It is also agreed, that the like severity of punishment shall be inflicted upon those who shall take commissions from enemies, to seize the ships of either ally or party.

After this marine-treaty between Great Britain and France, there is none other wherein England is concerned, till the time of King James II. who, in the year 1685, renewed all former alliances with the Dutch, and particularly fix several treaties.

The treaty made at the general peace of Ryswick is the next that occurs; but it relates only to France and Holland, by which the French and Dutch may freely frequent with their ships and merchandises, the countries, lands, towns, ports, and places of each other, with equal privileges, and without paying any other or greater duties in each others countries, than the natural subjects of the country. As to the treaties with Spain, they are as follow.

The treaty of peace and friendship, between the crowns of Great Britain *and* Spain, *concluded at Madrid, the* $\frac{13}{23}$ *day of May, in the year of our Lord* 1667.

I. It is agreed and concluded, that, from this day forward, there shall be, between the two crowns of Great Britain and Spain, a general, good, sincere, true, firm, and perfect amity, confederation, and peace, which shall endure for ever, and be observed inviolably, as well by land as by sea and fresh waters; and also between the lands, countries, kingdoms, dominions, and territories, belonging unto, or under the obedience of either of them; and that their subjects, people, and inhabitants, respectively, of what condition, degree, or quality soever, from henceforth reciprocally, shall help, assist, and shew to one another all manner of love, good offices, and friendship.

II. That neither of the said Kings, nor their respective people, subjects or inhabitants within their dominions, upon any pretence, may, in public or secret, do or procure to be done, any thing against the other, in any place, by sea or land, nor in the ports or rivers of the one or the other, but shall treat one another with all love and friendship; and may by water and by land freely and securely pass into the confines, countries, lands, kingdoms, islands, dominions, cities, towns, villages, walled or without wall, fortified or unfortified, their havens and ports, where hitherto trade and commerce hath been accustomed, and there trade, buy, and sell, as well of and to the inhabitants of the respective places, as those of their own nation, or any other nation that shall be or come there.

III. That the said Kings of Great Britain and Spain shall take care that their respective people and subjects from henceforward do abstain from all force, violence, or wrong; and if any injury shall be done by either of the said Kings, or by the people or subjects of either of them, to the people or subjects of the other, against the articles of this alliance, or against common right, there shall not therefore be given letters of repriſal, marque,

or counter-marque, by any of the confederates, until ſuch time as juſtice is ſought and followed in the ordinary courſe of law. But if juſtice be denied or delayed, then the King whoſe people or inhabitants have received harm, ſhall aſk it of the other, by whom, as is ſaid, the juſtice ſhall have been denied or delayed, or of the commiſſioners that ſhall be by the one King or the other appointed to receive and hear ſuch demands, to the end that all ſuch differences may be compounded in friendſhip, or according to law. But if there ſhould be yet a delay, or juſtice ſhould not be done, nor ſatisfaction given within ſix months after having the ſame ſo demanded, then may be given letters of repriſal, marque, or counter-marque.

IV. That between the King of Great Britain and the King of Spain, and their reſpective people, ſubjects, and inhabitant, as well upon ſea as upon land and freſh waters, in all and every their kingdoms, lands, countries, dominions, confines, territories, provinces, iſlands, plantations, cities, villages, towns, ports, rivers, creeks, bays, ſtreights, and currents, where hitherto trade and commerce hath been accuſtomed, there ſhall be free trade and commerce, in ſuch way and manner, that without ſafe conduct, and without general or particular licence, the people and ſubjects of each other may freely, as well by land as by ſea and freſh waters, navigate, and go into their ſaid countries, kingdoms, dominions, and all the cities, ports, currents, bays, diſtricts, and other places thereof; and may enter into any port with their ſhips laden or empty, carriage or carriages wherein to bring their merchandiſe, and there buy and ſell what and how much they pleaſe, and alſo at juſt and reaſonable rates provide themſelves with proviſions, and other neceſſary things for their ſubſiſtence and voyage; and alſo may repair their ſhips and carriages, and from thence again freely depart with their ſhips, carriages, goods, merchandiſe, and eſtate, and return to their own countries, or to ſuch other places as they ſhall think fit, without any moleſtation or impediment, ſo that they pay the duties and cuſtoms which ſhall be due, and ſaving to either ſide the laws and ordinances of their country.

V. *Item*, It is likewiſe agreed, that for the merchandiſes which the ſubjects of the King of Great Britain ſhall buy in Spain, or other the kingdoms or dominions of the King of Spain, and ſhall carry in their own ſhips, or in ſhips hired or lent unto them, no new cuſtoms, toll, tenths, ſubſidies, or other rights or duties whatſoever, ſhall be taken or increaſed, other than thoſe which in the like caſe the natives themſelves, and all other ſtrangers, are obliged to pay; and the ſubjects aforeſaid buying, ſelling, and contracting for their merchandiſes, as well in reſpect of the prices, as of all duties to be paid, ſhall enjoy the ſame privileges which are allowed to the natural ſubjects of Spain, and may buy and lade their ſhips with ſuch goods and merchandiſes; which ſaid ſhips being laden, and cuſtoms paid for the goods, ſhall not be detained in port upon any pretence whatſoever; nor ſhall the laders, merchants, or factors, who bought and loaded the goods aforeſaid, be queſtioned after the departure of the ſaid ſhips, for any matter or thing whatſoever concerning the ſame.

VI. And to the end that the officers and miniſters of all cities, towns, and villages, belonging to either, may neither demand nor take from the reſpective merchants and people, greater taxes, duties, ſtipends, recompences, gifts, or any other charges, than what ought to be taken by virtue of this treaty; and that the ſaid merchants and people may know and underſtand with certainty what is ordained in all things touching this, it is agreed and concluded, that tables and liſts ſhall be put up at the doors of the cuſtomhouſes and regiſtries of all the cities, villages, and towns of or appertaining to one or the other King where ſuch rights, and exciſes, or cuſtoms are uſually paid; in which, how much, and of what quality ſuch rights, cuſtoms, ſubſidies, and payments, either to the Kings, or any the aforeſaid officers, are allowed, ſhall be put down in writing, declaring as well the ſpecies of what is imported, as what is carried out. And if any officer, or any other in his name, upon any pretence whatſoever, in public or ſecret, directly or indirectly, ſhall aſk or receive of any merchant, or other perſon reſpectively, any ſum of money, or other thing, by the name of right, due, ſtipend, allowance, or recompence, though it be by the way of voluntary donative, more or otherwiſe than aforeſaid, the ſaid officer, or his deputy, being in ſuch manner guilty, and convict before a competent judge in the country where the crime is committed, ſhall be put in priſon for three months, and ſhall pay thrice the value of the thing ſo received; of which the half ſhall be for the King of the country where the crime is committed, and the other half for the denunciator; for the which he may ſue his right before any competent judge of the country where it ſhall happen.

VII. That it ſhall be lawful for the ſubjects of the King of Great Britain to bring out, and carry into Spain, and all or any lands and dominions of the King of Spain, where heretofore they have uſed trade and commerce, and trade there with all kind of merchandiſe, cloths, manufactures, and things of the kingdom of Great Britain, and the manufactures, goods, fruits, and kinds of the iſlands, towns, and plantations, to him appertaining, and what ſhall have been bought by Engliſh factors on this ſide, or farther on the other ſide of the cape of Buena Eſperança, without being enforced to declare to whom, or for what price they ſell their ſaid merchandiſe and proviſions, or being moleſted for the errors of the maſters of the ſhips, or others, in the entry of the goods; and at their pleaſure to return again out of the dominions of the King of Spain, with all or any goods, eſtates, and merchandiſe, to any of the territories, iſlands, dominions, and countries of the King of England, or to any other place, paying the rights and tributes mentioned in the antecedent chapters; and the reſt of all their lading which is not brought to land, they may detain, keep, and carry away in their ſaid ſhip or ſhips, veſſel or veſſels again, without paying any right or impoſition whatſoever for it, as if therewith they had never been within any bay or port of the Catholic King. And all the goods, eſtates, merchandiſe, ſhips, or other veſſels, with any things introduced into the dominions or places of the crown of Great Britain as prizes, and judged for ſuch in the ſaid dominions and places, ſhall be taken for goods and merchandiſe of Great Britain, comprehended ſo by the intention of this article.

VIII. That the ſubjects and vaſſals of the moſt ſerene King of Great Britain may bring and carry to all and ſingular the dominions of the King of Spain, any fruits and commodities of the Eaſt Indies; it appearing by teſtimony of the deputies of the Eaſt India company in London, that they are of, or have come from the Engliſh conqueſts, plantations, or factories, with like privilege, and according to what is allowed to the ſubjects of the United Provinces, by the royal cedulas of Contravando, bearing date the 27th of June and the 3d of July 1663, and publiſhed on the 30th of June and 4th of July the ſame year. And for what may concern both the Indies, and any other parts whatſoever, the crown of Spain doth grant to the King of Great Britain, and his ſubjects, all that is granted to the united ſtates of the Low Countries and their ſubjects, in their treaty of Munſter 1648, point for point, in as full and ample manner as if the ſame were herein particularly inſerted, the ſame rules being to be obſerved whereunto the ſubjects of the ſaid united ſtates are obliged, and mutual offices of friendſhip to be performed from one ſide to the other.

IX. That the ſubjects of the King of Great Britain, trading, buying, and ſelling in any of the kingdoms, governments, iſlands, ports, or territories of the ſaid King of Spain, ſhall have, uſe, and enjoy all the privileges and immunities which the ſaid King hath granted and confirmed to the Engliſh merchants that reſide in Andaluſia, by his royal cedulas or orders, dated the 19th day of March, the 26th day of June, and the 9th day of November 1645; his Catholic Majeſty, by theſe preſents, reconfirming the ſame as a part of this treaty between the two crowns. And to the end that it be maniſeſt to all, it is conſented, that the ſaid ſchedules, as to the whole ſubſtance thereof, be paſſed and transferred to the body of the preſent articles, in the name and fa-

vour of all and ſingular the ſubjects of the King of Great Britain, reſiding and trading in any places whatſoever within his Catholic Majeſty's dominions.

X. That the ſhips, or any other veſſels that ſhall belong to the King of Great Britain, or his ſubjects, navigating into the King of Spain's dominions, or any of his ports, ſhall not be viſited by the judges of counterband, or by any other officer or perſon, by his own, or by any other authority; nor ſhall any ſoldiers, armed men, or other officers or perſons be put on board any of the ſaid ſhips or veſſels; nor ſhall the officers of the cuſtomhouſe of the one or the other party, ſearch in any veſſels or ſhips belonging to the people of the one or the other, which ſhall enter into their regions, dominions, or reſpective ports, until their ſaid ſhips or veſſels are unladen, or until they have carried on ſhore all the lading and merchandiſe which they declare they reſolve to diſembark in the ſaid port; nor ſhall the captain, maſter, or any other of the company of the ſaid ſhips be impriſoned, or they or their boats detained on ſhore; but, in the interim, officers of the cuſtomhouſe may be put on board the ſaid veſſels or ſhips, ſo they exceed not the number of three for each ſhip, to ſee that no goods or merchandiſe be landed out of the ſaid ſhips or veſſels, without paying ſuch duties as by theſe articles either party is obliged to pay; which ſaid officers are to be without any charge to the ſhip or ſhips, veſſel or veſſels, their commanders, mariners, company, merchants, factors, or proprietors. And when it happens that the maſter or owner of any ſhip ſhall declare the whole lading of his ſaid ſhip is to be diſcharged in any port, the entry of the ſaid lading ſhall be made in the cuſtomhouſe, after the uſual manner; and if, after the entry made, any other goods be found in the ſaid ſhip or ſhips, more than what are contained in the ſaid entry, eight working-days ſhall be allowed them on which they may work, which ſhall be reckoned from the day they began to unlade, to the end that the concealed goods may be entered, and the confiſcation of them prevented: and in caſe that in the time limited, the entry or manifeſtation of them ſhall not have been made, then ſuch particular goods only, which ſhall be found as aforeſaid, though the unlading be not finiſhed, ſhall be confiſcated, and not any other; nor ſhall other trouble be given, or puniſhment inflicted, on the merchant or owner of the ſhip; and when the ſhips or veſſels are reladen, they may have freedom to go out again.

XI. That the ſhip or ſhips appertaining to the one or the other King, or to their reſpective people and ſubjects, that ſhall enter into any ports, lands, or dominions of the one or the other, and ſhall diſcharge any part of their goods and merchandiſes in any port or haven, being conſigned with the reſt to other places within or without the ſaid dominions, ſhall not be obliged to regiſter or pay the rights of any other goods or merchandiſe, than of that which they ſhall unlade in the ſaid port or haven, nor be conſtrained to give bond for the goods they ſhall carry to other places, nor any other ſecurity, if it be not in caſe of felony, debt, treaſon, or other capital crime.

XII. Whereas the one moiety of the cuſtom of all foreign goods and merchandiſes imported into England, is allowed and returned back to the importer, if the ſaid goods be exported out of the ſaid kingdom within twelve months after the firſt landing, upon oath made that they are the ſame goods which paid cuſtom inwards; and that if they be not reſhipped within the ſaid twelve months, yet they may at all times be exported without paying any cuſtom or duty outwards; it is therefore agreed, That if any the ſubjects of the King of Great Britain ſhall hereafter land any goods or merchandiſe, of what growth or nature ſoever they be, in any of the ports of his Catholic Majeſty, and having entered them, and paid the cuſtom which by this treaty ought to be paid, and ſhall afterwards deſire to tranſport them, or any part of them, to any other place whatſoever, for a better market, it ſhall and may be lawful for him or them ſo to do freely, without paying, or being demanded, any other cuſtom or duty at all for the ſame; he or they making oath, if required thereunto, that they are the ſame goods for which cuſtom was paid at the landing: and in caſe that the ſubjects, people, and inhabitants of the dominions of either part ſhall unlade, or have in any city, town, or village reſpectively, any goods, merchandiſe, fruits, or eſtates, and have paid the cuſtoms due, according to what hath been declared; and after that, not being able to put them off, ſhall reſolve to remit them to ſome other city, town, or village of the ſaid dominions, they may not only do it without difficulty or impediment, and without paying other rights than what were due at their entry; but likewiſe the cuſtom or rights ſhall not be paid again in any other part of the ſaid dominions, bringing certificates from the officers of the cuſtomhouſe, that they were paid before in the due form. And the chief farmers and commiſſioners of the King of Spain's rents in all places, or ſome other officer or officers to be appointed for that purpoſe, ſhall at all times permit and ſuffer the tranſportation of all ſuch goods and merchandiſes from place to place, and give ſufficient certificate to the owners thereof, or their aſſigns, of their having paid their cuſtom at their firſt landing, whereby they may be carried to, and landed at any other port or place of the ſaid juriſdiction, free from all duties or impediments whatſoever, as aforeſaid, ſaving always the right of any third perſon.

XIII. That it ſhall be lawful for the ſhips belonging to the ſubjects of the one or the other King, to anchor in the roads or bays of either, without being conſtrained to enter into port; and in caſe they be neceſſitated to enter thereinto, either by diſtreſs of weather, fear of enemies, pirates, or any other accident, in caſe the ſaid ſhips be not bound to an enemy's port, and carrying thither contraband goods, whereof, without ſome clear proof, they ſhall not be queſtioned, it ſhall be lawful for the ſaid ſubjects to return to ſea freely when they pleaſe, with their ſhips and goods, ſo as they do not break bulk, or expoſe any thing to ſale; and that when they caſt anchor, or enter the ports aforeſaid, they be not moleſted or viſited; and it ſhall ſuffice, that in this caſe they ſhew their paſſports, or ſea-papers; which being ſeen by the reſpective officers of either King, the ſaid ſhips ſhall return freely to ſea without any moleſtation.

XIV. And if any ſhip or ſhips belonging to the ſubjects and merchants of the one or the other, entering into bays, or in the open ſea, ſhall be encountered by the ſhips of the ſaid Kings, or of privateers their ſubjects; the ſaid ſhips, to prevent all diſorders, ſhall not come within cannon-ſhot; but ſhall ſend their long boat, or pinnace, to the merchant-ſhip, and only two or three men on board; to whom the maſter or owner ſhall ſhew his paſſports and ſea letters, according to the form which ſhall be inſerted at the end of this treaty; whereby not only the ſhip's lading, but the place to which ſhe belongs, and as well the maſter and owner's name, as the name of the ſhip, may appear; by which means the quality of the ſhip, and her maſter or owner, will be ſufficiently known, as alſo the commodities ſhe carries, whether they be contraband or not; to the which paſſports and ſea-letters entire faith and credit ſhall be given, ſo much the rather, for that as well on the part of the King of England, as of the King of Spain, ſome counter-ſigns ſhall be given, if it ſhall be found neceſſary, whereby their authenticalneſs may the better appear, and that they may not be in any wiſe falſified.

XV. If any prohibited merchandiſe or goods ſhall be exported from the kingdoms, dominions, and territories of either of the ſaid Kings, by the reſpective people or ſubjects of the one or the other; in ſuch caſe the prohibited goods ſhall be only confiſcated, and not the other goods; neither ſhall the delinquent incur any other puniſhment, except the ſaid delinquent ſhall carry out from the reſpective kingdoms or dominions of the King of Great Britain, the proper coin, wool, or fullers earth, of the ſaid kingdoms; or ſhall carry out of the reſpective kingdoms or dominions of the ſaid King of Spain, any gold or ſilver, wrought or unwrought; in either of which caſes the laws of the reſpective countries are to take place.

XVI. That it ſhall be lawful for the people and ſubjects of both Kings to have acceſs to the reſpective ports of the one and the other, and there remain, and depart again with

with the ſame freedom, not only with their ſhips, and other veſſels for trade and commerce, but alſo with their other ſhips fitted for war, armed, and diſpoſed to reſiſt and engage the enemy, and arriving by ſtreſs of weather to repair their ſhips, or furniſh themſelves with proviſions; ſo that entering willingly, they be not ſo numerous, that they give juſt occaſion of ſuſpicion; to which end they are not to exceed the number of eight, not continue in their havens, nor about their ports, longer time than they ſhall have juſt cauſe, for the repair of their ſhips, to take in proviſions, or other neceſſary things, much leſs be the occaſion of interrupting the free commerce, and coming in of other ſhips, of nations in amity with either King; and when an unuſual number of men of war by accident ſhall come unto any port, it ſhall not be lawful for them to come into the ſaid ports or havens, not having firſt obtained permiſſion of the King unto whom the ſaid ports do belong, or the governors of the ſaid ports, if they be not forced thereinto by ſtreſs of weather, or other neceſſity, to avoid the danger of the ſea; and in ſuch caſe they ſhall preſently acquaint the governor or chief magiſtrate of the place, with the cauſe of their coming; nor ſhall they remain there any longer time than the ſaid governor or magiſtrate ſhall think convenient, or do any act of hoſtility in ſuch ports, that may prove of prejudice to the one or the other of the ſaid Kings.

XVII. That neither the ſaid King of Great Britain, nor the King of Spain, by any mandate general or particular, nor for any cauſe whatſoever, ſhall embark or detain, hinder, or take, for his reſpective ſervice, any merchant, maſter of a ſhip, pilot, or mariner, their ſhips, merchandiſe, cloaths, or other goods belonging unto the one or the other, in their ports or waters, if it be not that either of the ſaid Kings, or the perſons to whom the ſhips belong, be firſt advertiſed thereof, and do agree thereunto: provided, that this ſhall not be conſtrued to hinder or interrupt the ordinary courſe of juſtice and law in either country.

XVIII. That the merchants and ſubjects of the one and the other King, their factors and ſervants, as alſo their ſhips, maſters, or mariners, may, as well going as coming, upon ſea and other waters, as in the havens and ports of the one and the other reſpectively, carry and uſe all kind of arms, defenſive and offenſive, without being obliged to regiſter them; as alſo upon land, to carry and uſe them for their defence, according to the cuſtom of the place.

XIX. That the captains, officers, and mariners of the ſhips belonging to the people and ſubjects of either party, may not commence an action, nor hinder or bring trouble upon their own ſhips, their captains, officers, or mariners, in the reſpective kingdoms, dominions, lands, countries, or places, of the other, for their wages or ſalaries, or under any other pretence. Nor may they put themſelves, or be received, by what pretext or colour ſoever, into the ſervice or protection of the King of England, or King of Spain, or their arms: but if any controverſy happen between merchants and maſters of ſhips, or between maſters and mariners, the compoſing thereof ſhall be left to the conſul of the nation; but after ſuch manner, as he who ſhall not ſubmit to the arbitrement may appeal to the ordinary juſtice of the place where he is ſubject.

XX. The ſubjects and inhabitants of the kingdoms and dominions of the moſt ſerene King of Great Britain and Spain reſpectively, ſhall with all ſecurity and liberty ſail to, and traffic in all the kingdoms, eſtates, or countries, which are or ſhall be in peace, amity, or neutrality with the one or the other.

XXI. And they ſhall not be diſturbed or diſquieted in that liberty, by the ſhips or ſubjects of the ſaid Kings reſpectively, by reaſon of the hoſtilities which are or may be hereafter between either of the ſaid Kings, and the aforeſaid kingdoms, countries, and ſtates, or any of them, which ſhall be in friendſhip or neutrality with the other.

XXII. And in caſe that within the ſaid ſhips reſpectively, be found, by the aboveſaid means, any merchandiſe hereunder mentioned, being of contraband and prohibited, they ſhall be taken out and confiſcated, before the admiralty, or other competent judges; but for this reaſon the ſhip, and the other free and allowed commodities which ſhall be found therein, ſhall in no wiſe be either ſeized or confiſcated.

XXIII. Moreover, for better prevention of the differences which might ariſe touching the meaning of forbidden merchandiſe, and of contraband; it is declared and agreed, that under this name ſhall be comprehended all fire-arms, as ordnance, muſkets, mortar-pieces, petards, bombs, granadoes, fire-crancels, fire-balls, muſket-reſts, bandeliers, gun-powder, match, ſaltpetre, and bullets: likewiſe under the name of forbidden merchandiſe, are underſtood all other arms, as pikes, ſwords, pots, helmets, backs, and breaſts, halberds, javelins, and ſuch like armour: under this name is likewiſe forbidden the tranſportation of ſoldiers, horſes, their harneſſes, caſes of piſtols, holſters, belts, and other furniture, formed and compoſed for the uſe of war.

XXIV. Likewiſe, to prevent all manner of diſpute and contention, it is agreed, that under the name of forbidden merchandiſe, and of contraband, ſhall not be comprehended wheat, rye, barley, or other grains, or pulſe, ſalt, wine, oil, and generally whatſoever belongs to the ſuſtaining and nouriſhing of life; but they ſhall remain free, as likewiſe all other merchandiſes not comprehended in the preceding articles; and the tranſportation of them ſhall be free and permitted, although it be to the towns and places of enemies, unleſs ſuch towns and places be beſieged, and blocked up, or ſurrounded.

XXV. It is alſo agreed, that whatſoever ſhall be found laden by the ſubjects or inhabitants of the kingdoms and dominions of either of the ſaid Kings of England and Spain aboard the ſhips of the enemies of the other, though it be not forbidden merchandiſe, ſhall be confiſcated, with all things elſe which ſhall be found within the ſaid ſhips, without exception or reſerve.

XXVI. That the conſul which hereafter ſhall reſide in any of the dominions of the King of Spain, for the help and protection of the ſubjects of the King of Great Britain, ſhall be named by the King of Great Britain; and he ſo named ſhall have and exerciſe the ſame power and authority in the execution of his charge, as any other conſul hath formerly had in the dominions of the ſaid King of Spain; and in like manner the Spaniſh conſul reſiding in England, ſhall enjoy as much authority as the conſuls of any other nation have hitherto enjoyed in that kingdom.

XXVII. And that the laws of commerce that are obtained by peace, may not remain unfruitful, as would fall out if the ſubjects of the King of Great Britain, when they go to, come from, or remain in the dominions or lordſhips of the King of Spain, by reaſon of their commerce or other buſineſs, ſhould be moleſted for caſe of conſcience; therefore, that the commerce be ſecure, and without danger, as well upon land as ſea, the ſaid King of Spain ſhall provide, that the ſubjects of the ſaid King of Great Britain ſhall not be aggrieved contrary to the laws of commerce, and that none of them ſhall be moleſted or diſturbed for their conſcience, ſo long as they give no public ſcandal or offence: and the ſaid King of Great Britain ſhall likewiſe provide, for the ſame reaſons, that the ſubjects of the King of Spain ſhall not be moleſted or diſturbed for their conſcience againſt the laws of commerce, ſo long as they give no public ſcandal or offence.

XXVIII. That the people and ſubjects reſpectively of one kingdom, in the dominions, territories, regions, or colonies of the other, ſhall not be compelled to ſell their merchandiſe for braſs-metal coin, or exchange them for other coin or things, againſt their will; or having ſold them, to receive the payment in other ſpecies than what they bargained for, notwithſtanding any law or other cuſtom contrary to this article.

XXIX. That the merchants of both nations, and their factors, ſervants, and families, commiſſioners, or others by them employed; as alſo maſters of ſhips, pilots, and mariners, may remain freely and ſecurely in the ſaid dominions, kingdoms, and territories, of either of the ſaid Kings,

Kings, and alſo in their ports and rivers; and the people and ſubjects of the one King may have, and with all freedom and ſecurity enjoy, in all the lands and dominions whatſoever of the other, their proper houſes to live in, their warehouſes and magazines for their goods and merchandiſe, which they ſhall poſſeſs during the time for which they ſhall have taken, hired, and agreed for them, without any impediment.

XXX. The inhabitants and ſubjects of the ſaid confederate Kings, in all the lands and places under the obedience of the one or the other, ſhall uſe and employ thoſe advocates, proctors, ſcriveners, agents, and ſolicitors, whom they think fit; the which ſhall be left to their choice, and conſented to by the ordinary judges, as often as there ſhall be occaſion; and they ſhall not be conſtrained to ſhew their books and papers of accompt to any perſon, if it be not to give evidence for the avoiding law-ſuits and controverſies; neither ſhall they be embarked, detained, or taken out of their hands, upon any pretence whatſoever. And it ſhall be permitted to the people and ſubjects of either King, in the reſpective places where they ſhall reſide, to keep their books of accompt, traffic, and correſpondence in what language they pleaſe, in Engliſh, Spaniſh, Dutch, or any other; the which ſhall not be moleſted, or ſubject to any inquiſition. And whatſoever elſe hath been granted by either party, concerning this particular, to any other nation, ſhall be underſtood likewiſe to be granted here.

XXXI. That in caſe the eſtate of any perſon or perſons ſhall be ſequeſtered or ſeized on by any court of juſtice or tribunal whatſoever, within the kingdoms and dominions of either party, and any eſtate or debt happen to lie in the hands of the delinquents belonging *bona fide* to the people and ſubjects of the other, the ſaid eſtate or debts ſhall not be confiſcated by any of the ſaid tribunals, but ſhall be reſtored to the true owners *in ſpecie*, if they yet remain, and if not, he value of them, according to the contract and agreement which was made between the parties, ſhall be reſtored within three months after the ſaid ſequeſtration.

XXXII. That the goods and eſtates of the people and ſubjects of the one King, that ſhall die in the countries, lands, and dominions of the other, ſhall be preſerved for the lawful heirs and ſucceſſors of the deceaſed; the right of any third perſon always reſerved.

XXXIII. That the goods and eſtates of the ſubjects of the King of Great Britain, that ſhall die without making a will in the dominions of the King of Spain, ſhall be put into inventory, with their papers, writings, and books of accompt, by the conſul or other public miniſter of the King of Great Britain, and depoſited in the hands of two or three merchants, that ſhall be named by the ſaid conſul or public miniſter, to be kept for the proprietors and creditors; and neither the cruzada, nor any other judicatory whatſoever, ſhall intermeddle therein; which alſo in the like caſe ſhall be obſerved in England towards the ſubjects of the King of Spain.

XXXIV. That a decent and convenient burial-place ſhall be granted and appointed to bury the bodies of the ſubjects of the King of Great Britain, who ſhall die within the dominions of the King of Spain.

XXXV. If it ſhall happen hereafter, that any difference fall out between the King of Great Britain and the King of Spain, whereby the mutual commerce and good correſpondence may be endangered, their reſpective ſubjects and people of each party ſhall have notice thereof given them in time; that is to ſay, the ſpace of ſix months, to tranſport their merchandiſe and effects, without giving them in that time any moleſtation or trouble, or retaining or embarking their goods or perſons.

XXXVI. All goods and rights concealed or embarked, moveables, immoveables, rents, deeds, debts, credits, and the like, which have not, with a formal notice of the cauſe, and by a legal condemnation, according to the ordinary juſtice, been brought into the royal exchequer at the time of concluding this treaty, ſhall remain at the full and free diſpoſal of the proprietors, their heirs, or of thoſe who ſhall have their right, with all the fruits, rents, and emoluments thereof; and neither thoſe who have concealed the ſaid goods, nor their heirs, ſhall be moleſted for this cauſe by the exchequers and executor reſpectively; but the proprietors, their heirs, or thoſe who ſhall have their right, ſhall have for the ſaid goods and rights their action at law, as for their own proper goods and eſtate.

XXXVII. It is agreed and concluded, that the people and ſubjects of the King of Great Britain, and of the King of Spain, ſhall have and enjoy in the reſpective lands, ſeas, ports, havens, roads, and territories, of the one or the other, and in all places whatſoever, the ſame privileges, ſecurities, liberties, and immunities, whether they concern their perſons or trade, with all the beneficial clauſes and circumſtances which have been granted, or ſhall be hereafter granted by either of the ſaid Kings, to the moſt Chriſtian King, the States-General of the United Provinces, the hanſe-towns, or any other kingdom or ſtate whatſoever, in as full, ample, and beneficial manner, as if the ſame were particularly mentioned and inſerted in this treaty.

XXXVIII. In caſe any difference or diſpute ſhall happen on either ſide concerning theſe articles of trade and commerce, by either the officers of the admiralty, or other perſon whatſoever, in the one or the other kingdom; the complaint being preſented by the party concerned to their Majeſties, or to any of their council, their ſaid Majeſties ſhall cauſe the damages forthwith to be repaired, and all things, as they are above agreed, to be duly executed: and in caſe that in progreſs of time any frauds or inconveniencies be diſcovered in the navigation and commerce between both kingdoms, againſt which ſufficient prevention hath not been made in theſe articles, other proviſions may be hereafter mutually agreed on, as ſhall be judged convenient; the preſent treaty remaining ſtill in full force and vigour.

A treaty for compoſing of differences, reſtraining of depredations, and eſtabliſhing of peace, in America, between the crowns of Great Britain *and* Spain, *concluded at Madrid, the* $\frac{8}{18}$*th day of July in the year of the Lord* 1670.

Whereas, for many years paſt, the good underſtanding and correſpondence between the Engliſh and Spaniſh nations having been diſturbed in America, it pleaſed the moſt ſerene and powerful Prince Charles, King of Great Britain, &c. in order to the reſtoring and regulating the ſame for the future, to ſend into Spain his envoy-extraordinary, Sir William Godolphin, knight, with full authority and power to make any treaty convenient and proper for that end: and likewiſe the moſt ſerene and powerful Prince Charles, King of Spain, &c. and the Queen Regent Maria-Anna, &c. for the carrying on a work of ſo much piety and public good, deputed on their part the Earl of Penaranda, counſellor of ſtate, and preſident of the Indies, to confer, treat, and conclude thereupon with the ſaid Sir William Godolphin. At length they mutually reſolved and agreed upon the articles of the following treaty, in virtue of their ſeveral commiſſions.

I. It is agreed between the above mentioned plenipotentiaries, Sir William Godolphin, and the Earl of Penaranda, in the names of the moſt ſerene Kings reſpectively, their maſters, that the articles of peace and alliance made between the crowns of Great Britain and Spain, in Madrid, on the $\frac{13}{23}$ of May 1667, or any clauſe thereof, ſhall in no manner be deemed or underſtood to be taken away or abrogated by this preſent treaty; but that the ſame ſhall remain perpetually in their ancient force, ſtability, and vigour, ſo far forth as they are not contrary or repugnant to this preſent convention and articles, or to any thing therein contained.

II. That there be an univerſal peace, true and ſincere amity, in America, as in the other parts of the world, between the moſt ſerene Kings of Great Britain and Spain, their heirs and ſucceſſors, and between the kingdoms, ſtates, plantations, colonies, forts, cities, iſlands, and dominions, without any diſtinction of place belonging unto either of them, and between the people and inhabitants under their reſpective obedience, which ſhall endure from this day for ever, and be obſerved inviolably, as well by land as by ſea and freſh waters, ſo as to promote

each the welfare and advantage of the other, and favour and aſſiſt one another with mutual love; and that every where, as well in thoſe remote countries as in theſe which are nearer, the faithful offices of good neighbourhood and friendſhip may be exerciſed and increaſe between them.

III. Alſo, that, for the time to come, all enmities, hoſtilities, and diſcords, between the ſaid Kings, their ſubjects and inhabitants, ceaſe and be aboliſhed, and that both parties do altogether forbear and abſtain from all plundering, depredation, injuries, and infeſtation whatſoever, as well by land as by ſea, and in freſh waters every where.

IV. The ſaid moſt ſerene Kings ſhall take care that their ſubjects do accordingly abſtain from all force and wrong-doing; and they ſhall revoke all commiſſions and letters of repriſal and mart, or otherwiſe containing licence ſoever to take prizes of what condition or kind, being to the prejudice of one or other of the ſaid Kings, or of their ſubjects, whether the ſame have been given or granted by them unto ſubjects or inhabitants, or unto ſtrangers, and ſhall declare the ſame to be void, and of no force, as by this treaty of peace they are declared ſo to be; and whoſoever ſhall do any thing to the contrary, he ſhall be puniſhed not only criminally according to the merit of his offence, but ſhall alſo be compelled to make reſtitution and ſatisfaction for the loſſes to the parties damnified requiring the ſame.

V. And furthermore, the ſaid Kings ſhall denounce, as by the tenor of theſe preſents every of them hath and doth denounce, whatſoever league, confederation, capitulation, and intelligence, made by what manner ſoever in the prejudice of the one or the other, which doth or may repugn againſt this peace and concord, and all and ſingular the contents thereof; all which, and every of them, ſo far as they do concern the effect aforeſaid, they ſhall annul and make void, and declare to be of no force or moment.

VI. The priſoners of both ſides, one and all, of what degree or condition ſoever, detained by reaſon of any hoſtilities hitherto committed in America, ſhall be forthwith ſet at liberty without ranſom, or any other price of their freedom.

VII. All offences, damages, loſſes, or injuries, which the nations and people of Great Britain and Spain have at any time heretofore, upon what cauſe or pretext ſoever, ſuffered by each other in America, ſhall be expunged out of remembrance, and buried in oblivion, as if no ſuch thing had ever paſt.

Moreover, it is agreed, that the moſt ſerene King of Great Britain, his heirs and ſucceſſors, ſhall have, hold, keep, and enjoy for ever, with plenary right or ſovereignty, dominion, poſſeſſion, and propriety, all thoſe lands, regions, iſlands, colonies and places whatſoever, being or ſituated in the Weſt Indies, or in any part of America, which the ſaid King of Great Britain and his ſubjects do at preſent hold and poſſeſs; ſo as that in regard thereof, or upon any colour or pretence whatſoever, nothing more may or ought to be urged, nor any queſtion or controverſy be ever moved concerning the ſame hereafter.

VIII. The ſubjects and inhabitants, merchants, captains, maſters of ſhips, mariners of the kingdoms, provinces, and dominions of each confederate reſpectively, ſhall abſtain and forbear to ſail and trade in the ports and havens which have fortifications, caſtles, magazines, or warehouſes, and in all other places whatſoever, poſſeſſed by the other party in the Weſt Indies; to wit, the ſubjects of the King of Great Britain, ſhall not ſail unto and trade in the havens and places which the Catholic King holdeth in the ſaid Indies; nor, in like manner, ſhall the ſubjects of the King of Spain ſail unto, or trade in thoſe places which are poſſeſſed there by the King of Great Britain.

IX. But if at any time hereafter either King ſhall think fit to grant unto the ſubjects of the other any general or particular licence or privileges of navigating unto and trading in any places under his obedience, who ſhall grant the ſame, the ſaid navigation and trade ſhall be exerciſed and maintained, according to the form, tenor, and effect of the ſaid permiſſions or privileges to be allowed and given; for the ſecurity, warrant, and authority whereof, this preſent treaty, and the ratification thereof, ſhall ſerve.

X. It is alſo agreed, that in caſe the ſubjects and inhabitants of either of the confederates, with their ſhipping, whether public and of war, or private and of merchants, be forced at any time, by ſtreſs of weather, purſuit of pirates and enemies, or other inconvenience whatſoever, for the ſeeking of ſhelter and harbour, to retreat and enter into any of the rivers, creeks, bays, havens, roads, ſhores, and ports belonging to the other in America, they ſhall be received and treated there with all humanity and kindneſs, and enjoy all friendly protection and help. And it ſhall be lawful for them to refreſh and provide themſelves at reaſonable and the uſual rates, with victuals, and all things needful, either for the ſuſtenance of their perſons, or reparation of their ſhips, and conveniency of their voyage; and they ſhall in no manner be detained or hindered from returning out of the ſaid port or roads, but ſhall remove and depart, when and whither they pleaſe, without any let or impediment.

XI. Likewiſe, if either ſhips belonging to either confederate, their people and ſubjects ſhall, within the coaſts or dominions of the other, ſtick upon the ſands, or be wrecked, or ſuffer any damage, the perſons ſhip-wrecked and caſt on the ſhore ſhall in no ſort be kept priſoners; but, on the contrary, all friendly aſſiſtance and relief ſhall be adminiſtered to their diſtreſs, and letters of ſafe-conduct given them for their free and quiet paſſage thence, and the return of every one to his own country.

XII. But when it ſhall happen, that the ſhips of either, as is above mentioned, through the danger of the ſea, or other urgent cauſe, be driven into the ports and havens of the other, if they be three or four together, and may give juſt ground of ſuſpicion, they ſhall immediately, upon their arrival, acquaint the governor or chief magiſtrate of the place, with the cauſe of their coming, and ſhall ſtay no longer than the ſaid governor or chief magiſtrate will permit, and ſhall be requiſite for the furniſhing themſelves with the victuals and reparation of their ſhips. And they ſhall always take care not to carry out of their ſhips any goods or packs, expoſing them to ſale; neither ſhall they receive any merchandiſe on board, nor do any thing contrary to this treaty.

XIII. Both parties ſhall truly and firmly obſerve and execute this preſent treaty, and all and every the matters therein contained, and effectually cauſe the ſame to be obſerved and performed by the ſubjects and inhabitants of either nation.

XIV. No private injury ſhall in any ſort weaken this treaty, nor beget hatred or diſſenſions between the aforeſaid nations; but every one ſhall anſwer for his own proper fact, and be proſecuted thereupon; neither ſhall one man ſatisfy for the offence of another by repriſals, or other ſuch like odious proceedings, unleſs juſtice be denied, or unreaſonably be delayed; in which caſe it ſhall be lawful for that King, whoſe ſubject hath ſuffered the loſs and injury, to take any courſe according to the rules and method of the law of nations, until reparation be made to the ſufferer.

XV. The preſent treaty ſhall in nothing derogate from any pre-eminence, right, or dominion, of either confederate in the American ſeas, channels, or waters; but that they have and retain the ſame in as full and ample a manner as may of right belong unto them: but it is always to be underſtood, that the liberty of navigation ought in no manner to be diſturbed, where nothing is committed againſt the genuine ſenſe and meaning of theſe articles.

And now we are come to the treaties of commerce between her Majeſty Queen Anne, and the Kings of France and Spain.

A treaty of navigation and commerce, between the moſt ſerene and moſt potent Princeſs Anne, *Queen of* Great Britain, *&c. and the moſt ſerene and moſt potent Prince* Lewis XIV. *King of* France, *&c. concluded at Utrecht, the 31ſt of March* 1713.

I. It is agreed, that there ſhall be a perfect liberty of navigation and commerce between the ſubjects on each part, through all and every the kingdoms, ſtates, dominions, and

and provinces of their royal Majeſties in Europe, concerning all kinds of goods and merchandiſes, on the conditions in the following articles.

II. That if at any time any ill underſtanding ſhall happen between the crowns of their royal Majeſties, ſix months ſhall be allowed to the ſubjects and inhabitants of each party reſiding in the dominions of the other, for them to retire with their families, goods, merchandiſes, and effects, and to ſell and diſpoſe of their goods, without any manner of diſturbance, arreſt, or ſeizure; and they ſhall have ſpeedy juſtice for the recovery of their dues.

III. That the ſubjects of each of their royal Majeſties ſhall exerciſe no acts of hoſtility againſt each other, neither by ſea nor land; nor receive any commiſſion from any prince or ſtate, to act as privateers, &c. to the diſturbance or prejudice of the ſubjects of Great Britain or France; and, to this end, prohibitions ſhall be publiſhed on either ſide, that no one ſhall in any wiſe uſe ſuch commiſſions, &c. under the ſevereſt penalties.

IV. The ſubjects of each of the ſaid confederates ſhall have free liberty, without licence, to go into the kingdoms, countries, provinces, iſlands, cities, ports, &c. of each other, in Europe, to abide there, paſs through the ſame, and to return from thence; and in the mean time to buy all things for their ſubſiſtence and uſe, and to be treated with mutual kindneſs, they behaving conformably to the laws, and living peaceably.

V. That the ſubjects of each of their Majeſties ſhall have leave to come with their ſhips and merchandiſes, not being prohibited, to the lands, countries, cities, and ports &c. of either ſide, to enter into the ſame, and remain there without limitation of time; alſo to hire houſes, &c. and buy all kinds of lawful merchandiſes, and lay up, and expoſe to ſale, merchandiſes brought from other ports, but not to ſell the ſame in ſhops, or by retail, without any impoſitions, and have free leave to remove themſelves and families, goods and effects, whither they ſhall think fit, without any moleſtation, paying the uſual duties. And in the buſineſs of religion, an entire liberty ſhall be allowed to the ſubjects of each of the confederates, and their families, privately, and within their own walls, without admitting any other perſons, &c.

VI. The ſubjects of each party ſhall pay the tolls, cuſtoms, and duties, of import and export, through all the territories of either party, as are due and accuſtomed; and to aſcertain the ſame, tables ſhall be kept in public places in all towns where trading is uſed: and if any officer, or other perſon, ſhall take of a merchant, or any other perſon, any ſum of money, on account of compenſation, although it be under the name of a free gift, more than what is preſcribed; ſuch officer, on conviction, ſhall make full ſatisfaction to the party wronged, and be puniſhed according to law.

VII. Neither any merchants, maſters of ſhips, owners, mariners, or merchandiſes of either party, ſhall on any pretence be ſeized in any of the ports, &c. or dominions of each other, for public uſe, nor for other cauſe, or be in any wiſe moleſted; and it ſhall be unlawful to export any thing from each other: but, however, this is not to be underſtood of that ſeizure which ſhall be made by the authority of juſtice, and in the ordinary methods of accompt, debt, &c.

VIII. Further, it is agreed, that all the ſubjects of the Queen of Great Britain, and of the moſt Chriſtian King, in all countries ſubject to their power, as to duties and cuſtoms concerning navigation and commerce, ſhall have the ſame privileges and immunities in the courts of juſtice, and all things relating to commerce, which any foreign nation, the moſt favoured, is allowed.

IX. It is alſo agreed, that within two months a law ſhall be made in Great Britain, taking off the duties on merchandiſe brought from France to Britain, more than are paid by other countries in Europe; and that the acts for prohibiting the importation of goods from France, be repealed. The general tariff, made in the year 1664, ſhall take place, and the duties be paid according to the tenor of the ſame, and all prohibitions, edicts, &c. made in France ſince that year, ſhall be repealed. But whereas the manufactures of wool, ſugar, ſalted fiſh, &c. are urged by France to be excepted out of the rule of the ſaid tariff, and have not been mutually adjuſted; it is provided, that commiſſaries on both ſides ſhall meet at London, to determine the ſame, within two months after the exchange of the ratifications of this treaty.—— *However, this article was afterwards over-ruled by the houſe of commons, who thought it extremely prejudicial to Great Britain.*

X. The duties on tobacco imported into France, ſhall be reduced to the ſame moderate rate as tobacco of the growth of any country in Europe or America, that is brought into that kingdom: the ſubjects on both ſides ſhall pay the ſame duties in France; and there ſhall be an equal liberty of ſelling, and the Britiſh ſubjects have the ſame benefit of the laws as the merchants of France.

XI. The tax of 50 ſols tournois, laid on Britiſh ſhips in France for every tun, and the tax of 5 s. laid on French ſhips in Great Britain for every tun, ſhall ceaſe.

XII. It is further agreed, that all merchants, &c. and ſubjects of Great Britain in all places of France, ſhall freely manage their own buſineſs themſelves, or as they think fit. And maſters of ſhips ſhall not be obliged, in loading or unloading their veſſels at Bourdeaux, or in any other place, to make uſe of workmen appointed by public authority; but it ſhall be free for them to employ ſuch perſons as they ſhall think fit; neither ſhall they be obliged to wait for their being loaded, or to receive any goods: and the ſubjects of France ſhall have the ſame privileges in all places ſubject to the dominion of Great Britain.

XIII. It ſhall be lawful for merchants and others, ſubjects of either party, by will, or any other ways, to deviſe or diſpoſe of their monies and effects; and whether they die having made their wills, or inteſtate, their lawful heirs, executors or adminiſtrators, although they be not naturalized, ſhall peaceably receive and take poſſeſſion of all goods and effects whatſoever, according to the laws of Great Britain and France; any law, ſtatute, edict, or cuſtom, to the contrary notwithſtanding.

XIV. A diſpute ariſing between any commander of a ſhip on either ſide, and his ſeamen, in any port of the other party, concerning the ſeamens wages, or other civil cauſe; the magiſtrate of the place ſhall require no more from the perſon accuſed, than a declaration in writing, whereby he ſhall be bound to anſwer that matter in his own country; whereupon the ſeamen ſhall not deſert the ſhip, nor hinder the voyage. And merchants, on both ſides, ſhall keep books of accompts, and have an intercourſe of letters, without moleſtation or ſearch.

XV. It ſhall not be lawful for any foreign privateers, having commiſſions from any prince or ſtate in enmity with either nation, to fit their ſhips in the ports of either of the ſaid parties, or to ſell their prizes there, or purchaſe any thing but ſuch victualling as ſhall be neceſſary for their going to the next port of that prince from whom they have their commiſſions.

XVI. The ſhips of both parties being laden, and forced by ſtorm into the ports of each other, ſhall not be obliged to unlade their goods, or to pay any duty; but a ſmall part of the lading may be taken out, with leave, to purchaſe victualling, and that part only be liable to the duty.

XVII. It ſhall be lawful for all the ſubjects of the Queen of Great Britain, and of the moſt Chriſtian King, to ſail with their ſhips, with all liberty and ſecurity, to any ports or places of countries in enmity with either of them, and to trade with the ports and places of thoſe who are enemies to both, or either party; not only from thoſe places to neutral ports, but alſo from one place belonging to an enemy to another place of an enemy, without any diſturbance; and every thing found on board ſhall be deemed free, though belonging to enemies of either party, contraband goods excepted.

XVIII. This liberty of navigation and commerce ſhall extend to all kinds of merchandiſes, except thoſe that follow in the next article, ſignified by the name of contraband.

XIX. Under this name of contraband, or prohibited goods, ſhall be comprehended arms, great guns, bombs, fire-balls, &c. and all other warlike inſtruments.

XX. Theſe

XX. Theſe merchandiſes which follow, ſhall not be reckoned among prohibited goods; that is to ſay, all ſorts of cloths, and all other manufactures of wool, and other goods not worked into the form of inſtruments for war; but ſhall be reputed among free goods, as likewiſe all other merchandiſes not mentioned in the preceding article.

XXI. To the end all manner of quarrels may be prevented, in caſe either party ſhould be engaged in war, the ſhips of each party ſhall be furniſhed with paſſports, expreſſing the names of the ſhips, &c. and have certificates of their lading, that it may be known whether there be any contraband goods on board, and that the ſhips truly belong to the ſubjects of one of the princes.

XXII. The ſhips of the ſubjects of both their Majeſties, coming to the ſea-coaſts within the dominions of either of them, not being willing to put into port, or ſell their cargoes, ſhall not be obliged to give an account of their lading, unleſs they are ſuſpected, upon good grounds, of having contraband goods.

XXIII. And in caſe of a manifeſt ſuſpicion, they ſhall be obliged to produce their paſſports and certificates.

XXIV. But in caſe the ſhips of the ſubjects of either party, either on the coaſts or the high ſeas, ſhall meet with the men of war of the other; ſuch men of war ſhall remain out of cannon-ſhot, and ſhall ſend a boat only with two or three men, to ſee the paſſport of ſuch ſhip, whereupon ſhe ſhall have free paſſage.

XXV. But merchant-ſhips going to a port at enmity with the other party, ſhall be obliged to exhibit, either on the ſeas or in port, not only their paſſports, but certificates of their lading.

XXVI. And if one party, on exhibiting the ſaid certificates, ſhall find any contraband goods, it ſhall not be lawful to break up the hatches of the ſhip, or to open the cheſts, &c. unleſs the lading be landed in the preſence of officers of the admiralty, &c. and it ſhall be unlawful to ſell the ſame, till due proceſſes and confiſcation be obtained.

XXVII. On the contrary, it is agreed, that what ſhall be found laden by the ſubjects of either party, on any ſhip belonging to the enemy of the other, the whole, although it be not prohibited goods, may be confiſcated, as if it belonged to the enemy himſelf; except thoſe goods and merchandiſes ſhipped before the declaration of any war, &c. which ſhall not be liable to confiſcation, but ſhall be reſtored to the proprietors; but if the ſame be contraband goods, they ſhall not be afterwards carried to the ports of the enemy.

XXVIII. And for the ſecurity of the ſubjects of both their Majeſties againſt privateers, all the commanders of their ſhips, and their ſubjects, ſhall be forbid doing any damage to the other ſide; and if they act contrary, to make ſatisfaction and reparation, and be alſo puniſhed.

XXIX. For this cauſe, all commanders of privateers, before they receive their patents, ſhall be obliged to give ſufficient ſecurity, &c. that they will render ſatisfaction for all damages and injuries, which they ſhall commit during their courſes at ſea, contrary to this treaty, or the edicts of either party, &c.

XXX. Both parties ſhall ſhew a mutual favour in all their dominions to the ſubjects of each other, in the ſame manner as if they were their own ſubjects, and give neceſſary orders that juſtice be duly adminiſtered.

XXXI. Whenſoever the ambaſſador, or reſident of each of their Majeſties, ſhall complain of the injuſtice of any ſentence, care ſhall be taken that the ſame be reviewed and re-examined in their reſpective councils, and that right be done every complainant within the ſpace of three months.

XXXII. A ſuit being commenced between the captors of prizes, and reclaimers of the ſame, and ſentence given in favour of the reclaimers, the ſame ſhall be put in execution, on giving ſecurity, notwithſtanding the appeal of the captors; but this is not to be obſerved when judgment is given againſt the reclaimers.

XXXIII. In caſe ſhips are driven on rocks upon the coaſts of either party, and are there broken to pieces and wrecked, the goods and merchandiſes ſaved ſhall be faithfully reſtored to the proprietors, they paying only the expence of ſalvage; ſaving, at the ſame time, the rights and cuſtoms of each nation.

XXXIV. It ſhall be free for the ſubjects of each party to employ ſuch advocates, attorneys, notaries, ſolicitors, and factors, as they ſhall think fit.

XXXV. And that commerce may be more ſecurely and freely followed, it is agreed, that neither the Queen of Great Britain, nor the moſt Chriſtian King, ſhall receive any pirates and robbers into any of their ports, havens, &c. but ſhall cauſe them to be apprehended and puniſhed. And all ſhips, and goods taken by them, although they are ſold, ſhall be reſtored to the lawful owners, &c. and indemnification ſhall be thereupon.

XXXVI. It ſhall be lawful for the ſhips of war, and privateers of both parties, to carry their prizes where they please, without paying any thing, or being arreſted or ſearched, when they enter any ports belonging to either of their Majeſties; and they ſhall have liberty to depart to the place aſſigned in their commiſſions; but no ſhelter ſhall be allowed to ſuch as have made prize upon the ſubjects of either party.

XXXVII. Neither of their Majeſties ſhall permit, that the ſhips or goods of the other be taken on the coaſts, or in the ports of their dominions, by ſhips of war of any prince or ſtate whatſoever; and if ſuch a thing ſhould happen, both parties ſhall unite their force for reparation of the damage.

XXXVIII. If any inconveniencies happen on either ſide concerning the obſervance of this treaty, the friendſhip ſhall not immediately thereupon be broken; but the treaty ſhall ſubſiſt, and proper remedies for removing the inconveniencies ſhall be procured.

XXXIX. If a captor uſe torture upon the maſter of a ſhip, or the ſhip's crew, the ſhip and merchandiſes ſhall be forthwith releaſed, and ſet entirely free; and ſuch perſons as ſhall be found guilty of the crime, ſhall ſuffer the moſt ſevere puniſhments.

A treaty of commerce between her Majeſty Queen Anne, *and* Philip *King of* Spain, *concluded at Utrecht, the 28th of November* 1713, *by which a former treaty, made in the reign of King* Charles II. *is particularly ratified and confirmed; being as follows.*

I. It is agreed, that there ſhall be between the crowns of Great Britain and Spain, a good and perfect amity, as well by land as by ſea; and between the lands, countries, &c. belonging unto, or under the obedience of either of them.

II. That neither of the ſaid princes, nor their ſubjects, ſhall, on any pretence, do or procure to be done, any wrong or injury to the other, in any place of the one or the other, but ſhall treat one another with friendſhip; and may, by water and by land, ſecurely paſs into the countries, dominions, cities, towns, &c. accuſtomed to commerce, and there trade, buy and ſell, with any perſons whatſoever.

III. That the Kings of Great Britain and Spain ſhall take care that their ſubjects abſtain from all violence; and if injury ſhall be done on either ſide, againſt this treaty, letters of repriſal ſhall not therefore be given, until ſuch time as juſtice is ſought in the ordinary courſe of law: but if juſtice be denied or delayed, and no ſatisfaction given within ſix months, then may iſſue out letters of repriſal and marque.

IV. That between the King of Great Britain and the King of Spain, and their ſubjects, there ſhall be free trade and commerce, as well upon ſea as on land, in all and every their dominions, without ſafe conduct or particular licence; and the ſubjects of either party may enter into any port, with their ſhips laden or empty, and there buy and ſell, provide themſelves with proviſions, and alſo may repair their ſhips, and from thence freely depart without moleſtation, paying the uſual duties; and ſaving to either ſide the laws and ordinances of their country.

V. That for the merchandiſes which the ſubjects of Great Britain ſhall buy in Spain, no new cuſtoms, tolls, ſubſides, or other duties, ſhall be taken; and in the buying and ſelling of their merchandiſes, they ſhall enjoy the

the ſame privileges which are allowed to the natural ſubjects of Spain; and may lade their ſhips, which ſhall not be detained in port upon any pretence, after the cuſtoms paid, neither ſhall any factor be queſtioned after their departure.

VI. And to the end the duties may be known, tables and liſts thereof ſhall be put up at the doors of the cuſtomhouſes, &c. of all cities, towns, and ports, where cuſtoms are uſually paid, and any officer, &c. receiving more than mentioned in thoſe tables, ſhall ſuffer three months impriſonment, and pay three times the value of the ſum received.

VII. That it ſhall be lawful for the ſubjects of the King of Great Britain, to bring out and carry into any parts of Spain, where hitherto commerce hath been uſed, all kinds of cloths and manufactures of Great Britain, or of the plantations, &c. thereto belonging, and which ſhall be bought by Engliſh factors on this ſide the Cape of Good Hope; and to trade there, without declaring to whom, or for what price they ſell their merchandiſe, or being moleſted, paying the rights and tributes; and what lading they ſhall not bring to land, they may detain and carry away in their ſhips, without paying any duty; and prize-goods ſhall be taken for goods and merchandiſe of Great Britain.

VIII. That the ſubjects of Great Britain may bring and carry to all parts of Spain, any fruits and commodities of the Eaſt Indies, produced from the Engliſh plantations, or factories there, with the like privileges as are allowed to the ſtates of Holland, in the treaty of Munſter, concluded in the year 1648.

IX. That the ſaid ſubjects of Great Britain, trading, buying, and ſelling in any of the kingdoms or territories of Spain, ſhall have and enjoy all the privileges and immunities which are granted to the Engliſh merchants that reſide in Andaluſia, and which are hereby confirmed.

X. That the ſhips, or any other veſſels that ſhall belong to the King of Great Britain, or his ſubjects trading to Spain, ſhall not be viſited by the judges of contraband, or by any other officers; nor ſhall any ſoldiers be put on board the ſaid veſſels; nor may they be ſearched in any port by the officers of the cuſtoms, until the lading is carried on ſhore which they reſolve to diſembark and diſcharge in the ſaid port; nor ſhall the captain, maſter, or any of the ſhip's company, be impriſoned or detained on ſhore. If the whole lading of ſuch ſhips is to be diſcharged in any port, the entry ſhall be made in the uſual manner; and if, after entry made, any goods ſhall be found in the ſhip, more than what are contained in the ſaid entry, eight working-days ſhall be allowed, that the goods concealed may be entered; and if in that time an entry be not made, ſuch goods ſhall be confiſcated, but not any others; though no other puniſhment ſhall be inflicted; and when the ſhips are reladen, they may freely go out again.

XI. That the ſhips of either party, or their ſubjects, entering any ports, &c. of the one or the other, and diſcharging any part of their goods, and being conſigned with the reſt to other places, ſhall not be obliged to regiſter, or pay for any other merchandiſe than what is unladen; nor be compelled to give any ſecurity, unleſs in the caſe of felony, or debt, &c.

XII. That if any of the ſubjects of the King of Great Britain, ſhall land any goods or merchandiſes in any of the ports of his Catholic Majeſty, and having entered them, and paid the cuſtoms, ſhall afterwards deſire to tranſport them to any other place, they may do it without paying any other cuſtom or duty. And in caſe the ſubjects of either party ſhall unlade goods or merchandiſes, in any city or town, and having paid the duties, ſhall not be able to put them off, they may remit them to any other city, &c. without moleſtation, or paying any farther rights than what were due at their entry.

XIII. That it ſhall be lawful for the ſubjects of Great Britain and Spain, to anchor their ſhips in the roads or bays of either kingdom, without being conſtrained to enter into port; and when they caſt anchor, or enter the ports, they ſhall not be moleſted or viſited, ſhewing their paſſports: and if the ſaid ſhips be not bound to any enemy's port, and carrying thither contraband goods, the ſaid ſubjects ſhall return to ſea freely with their ſhips, ſo as they do not break bulk, or expoſe any thing to ſale.

XIV. If any ſhips, belonging to the ſubjects of the one or the other party, ſhall enter into any bay, or in the open ſea ſhall be met by the ſhips of war of the ſaid Kings, or privateers; the ſaid ſhips ſhall not come within cannon-ſhot, but ſhall ſend their long-boat or pinnace, to the merchant-ſhip, and only two or three men to examine the paſſport, &c.

XV. And if any prohibited goods ſhall be exported from the dominions of either party, ſuch prohibited goods only ſhall be confiſcated, and not the other goods; neither ſhall any other puniſhment incur to the delinquent, unleſs he ſhall carry out of the dominions of Great Britain, the corn, wool, or fuller's earth of the ſaid kingdom; or ſhall carry out of Spain, any gold or ſilver; in either of which caſes, the laws of the reſpective countries are to take place.

XVI. That it ſhall and may be lawful for the ſubjects of both princes, to have acceſs to the ports of the one and the other, and there to remain, and depart again with their veſſels for trade; and for ſhips of war, arriving by ſtreſs of weather, to repair their ſhips, or to furniſh proviſions, not exceeding the number of eight ſuch ſhips, and not continuing longer than they ſhall have juſt cauſe. And when an unuſual number of men of war, by accident arrive near unto any port, it ſhall not be lawful for them to come into the ſaid ports or havens without leave; and in ſuch caſe they ſhall preſently acquaint the governor with the cauſe of their coming; nor ſhall they remain there longer than he ſhall think convenient.

XVII. That neither the ſaid King of Great Britain, nor the King of Spain, by any mandate, ſhall detain any merchant, maſter of a ſhip, pilot, or mariner, for his reſpective ſervice, or any ſhips, merchandiſe, &c. without a particular agreement thereunto; provided this ſhall not interrupt the ordinary courſe of juſtice.

XVIII. That the merchants and ſubjects of both princes, their factors and ſervants, and alſo their ſhips, maſters, or mariners, may in all places carry and uſe all kind of arms defenſive and offenſive, according to cuſtom.

XIX. That the captains, officers, and mariners, of the ſhips belonging to the ſubjects of either party, ſhall not commence an action, nor trouble their own ſhips, or any perſons belonging to them, in the dominions of the other, for wages, &c. under any pretence; nor may they put themſelves into the ſervice or protection of either prince; but if any controverſy happens, the compoſing thereof ſhall be left to the conſul of their nation, ſubject to appeal.

The 20th article relates only to the Low Countries.

XXI. The ſubjects and inhabitants of both kingdoms, ſhall with all ſecurity ſail to, and traffic in, all the countries which ſhall be in peace, amity, or neutrality, with the one or the other.

XXII. And they ſhall not be diſturbed in that liberty, by the ſhips or ſubjects of the ſaid princes reſpectively, by reaſon of hoſtilities which may be hereafter, with any kingdoms or ſtates now in friendſhip or neutrality with them.

XXIII. And in caſe that within the ſhips of either party ſhall be found any merchandiſe herein after mentioned, being contraband and prohibited, they ſhall be confiſcated; but other allowed commodities ſhall in no wiſe be ſeized.

XXIV. It is declared, that under the name of contraband goods, ſhall be comprehended all fire-arms, &c. and other warlike inſtruments; and tranſportation of ſoldiers, &c. ſhall not be permitted.

XXV. Under the name of forbidden merchandiſe, ſhall not be comprehended wheat, barley, rye, or other grains, or pulſe, ſalt, wine, oil, &c. but they ſhall remain free, and may be tranſported unto the towns of the enemies, unleſs ſuch towns are beſieged and blocked up.

XXVI. It is alſo agreed, that whatſoever ſhall be found laden by the ſubjects of either party aboard the ſhips of

the enemies of the other, though it be not forbidden merchandiſe, ſhall be confiſcated, with all things elſe on board the ſaid ſhips.

XXVII. That the conſul, which hereafter ſhall reſide in any of the dominions of the King of Spain, for the protection of the ſubjects of Great Britain, ſhall be named by the King of Great Britain, and ſhall exerciſe the full power as any conſul ever had; and in like manner the Spaniſh conſul ſhall enjoy the ſame authority in England.

XXVIII. That the King of Spain ſhall provide, that the ſubjects of Great Britain ſhall not be aggrieved contrary to the laws of commerce, and that none ſhall be diſturbed on account of conſcience; and the King of Great Britain ſhall take care that the ſubjects of Spain be not moleſted for their conſciences, or againſt the laws of commerce.

XXIX. That the ſubjects of one kingdom in the dominions of the other, ſhall not be compelled to ſell their merchandiſes for braſs metal, or exchange them for other coin againſt their will, or receive the payment for the ſame in other ſpecies than what they agreed for.

XXX. That the merchants of both nations, and their factors, ſervants, and families, and alſo maſters of ſhips, pilots, and mariners, may remain ſecurely in the dominions of either of the ſaid Kings, and enjoy their proper houſes, warehouſes, and magazines, for their merchandiſes, for the time agreed, without any impediment.

XXXI. And ſhall employ ſuch advocates, agents, and ſolicitors, as they think fit; and they ſhall not be conſtrained to ſhew their books of accompt, unleſs it be to give evidence for the avoiding of law-ſuits: and the ſubjects of either kingdom may keep their books of accompt in what language they pleaſe, and ſhall not be ſubject to any inquiſition.

XXXII. That in caſe the eſtate of any perſon ſhall be ſeized by any court of juſtice, within the dominions of either party, and any effects happen to be in the hands of the delinquent, belonging to the ſubjects of the other, the ſaid eſtate ſhall not be confiſcated, but ſhall be reſtored.

XXXIII. That the goods and eſtates of the ſubjects of the one King, that ſhall die in the dominions of the other, ſhall be preſerved for the lawful heirs; the right of a third perſon being ſaved.

XXXIV. That the eſtates of the ſubjects of Great Britain dying inteſtate in Spain, ſhall be inventoried by the Engliſh conſul, and depoſited in the hands of two or three merchants, named and appointed by him, for the benefit of the proprietors and creditors; the like to be obſerved in England towards the ſubjects of Spain.

XXXV. That a decent burial-place ſhall be granted to bury the bodies of the ſubjects of Great Britain, who ſhall die in Spain.

XXXVI. If any difference happen hereafter between the King of Great Britain and the King of Spain, the reſpective ſubjects of each party ſhall have notice thereof, and ſix months time given to tranſport their effects.

XXXVII. All goods and rights concealed, &c. which have not, by a legal condemnation, been brought into the exchequer at the time of concluding this treaty, ſhall remain at the free diſpoſal of the proprietors.

XXXVIII. That the people and ſubjects of both kingdoms ſhall enjoy in the lands, ports, &c. of the one or the other, the ſame privileges which have been or ſhall be granted by either Kings to the moſt Chriſtian King, the States-General, or any other kingdom or country, as fully as if they were particularly named.

XXXIX. In caſe any diſpute ſhall happen on either ſide concerning theſe articles, the complaint being preſented and proved, damages ſhall be forthwith repaired, &c.

XL. It is agreed, that the Kings of Great Britain and Spain ſhall faithfully obſerve and keep all and ſingular the capitulations in this preſent treaty, &c.

The preceding treaties with France and Spain, containing numerous articles, are here conciſely abridged, that they might not exceed due bounds. And this laſt treaty, we may take notice, contains a great many very good and excellent proviſions, for the mutual advantage of the ſubjects of each nation; though we are but little the better for them, with reſpect to our trade to the diſtant dominions of Spain.

There were likewiſe ſeveral ſeparate articles agreed to with Spain; the chief whereof were revoked by a treaty concluded with that kingdom by his late Majeſty King George I.

Alſo by a private treaty with Spain, concluded by his ſaid Majeſty, we had farther privileges granted in trade, eſpecially of ſending certain ſhips to the South ſea, &c. But this profitable trade of late was much interrupted, by the continual ſeizures and depredations of the Spaniſh privateers; and at laſt entirely abrogated, by the following treaty, made ſubſequent to the treaty of Aix-la-Chapelle in 1748.

Articles of the definitive treaty between Spain *and* England.

I. His Britannic Majeſty yields to his Catholic Majeſty his right to the enjoyment of the Aſſiento of negroes, and the annual ſhip, during the four years ſtipulated by the 16th article of the treaty of Aix-la-Chapelle.

II. His Britannic Majeſty, in conſideration of a compenſation of 100,000*l.* ſterling, which his Catholic Majeſty promiſes and engages to cauſe to be paid, either at Madrid or London, to the Royal Aſſiento company, within the term of three months at the lateſt, to be reckoned from the day of the ſigning of this treaty, yields to his Catholic Majeſty all that may be due to the ſaid company for balance of accompts, or ariſing in any manner whatſoever from the ſaid Aſſiento; ſo that the ſaid compenſation ſhall be eſteemed and looked upon as a full and entire ſatisfaction on the part of his Catholic Majeſty; and ſhall extinguiſh from this preſent time, for the future, and for ever, all right, pretenſion, or demand, which might be formed in conſequence of the ſaid Aſſiento, or annual ſhip, directly or indirectly, on the part of his Britannic Majeſty, or on that of the ſaid company.

III. The Catholic King yields to his Britannic Majeſty all his pretenſions or demands in conſequence of the ſaid Aſſiento and annual ſhip, as well with regard to the articles already liquidated, as to thoſe which may be eaſy or difficult to liquidate; ſo that no mention can ever be made of them hereafter on either ſide.

IV. His Catholic Majeſty conſents that the Britiſh ſubjects ſhall not be bound to pay higher or other duties, or upon other evaluations for goods which they ſhall carry into or out of the different ports of his Catholic Majeſty, than thoſe paid on the ſame goods in the time of Charles II. King of Spain, ſettled by the cedulas and ordonances of that King, or thoſe of his predeceſſors. And although the favour or allowance called *piel de farda* be not founded upon any royal ordonance, nevertheleſs his Catholic Majeſty declares, wills, and ordains, that it ſhall be obſerved now, and for the future, as an inviolable law; and all the above mentioned duties ſhall be exacted and levied, now, and for the future, with the ſame advantages and favours to the ſaid ſubjects.

V. His Catholic Majeſty allows the ſaid ſubjects to take and gather ſalt in the iſland of Tortudos, without any hindrance whatſoever, as they did in the time of the ſaid King Charles II.

VI. His Catholic Majeſty conſents that the ſaid ſubjects ſhall not pay any where, higher or other duties than thoſe which his Catholic Majeſty's ſubjects pay in the ſame place.

VII. His Catholic Majeſty grants that the ſaid ſubjects enjoy all the rights, privileges, franchiſes, exemptions, and immunities whatſoever, which they enjoyed before the laſt war, by virtue of cedulas or royal ordonances, and by the articles of the treaty of peace and commerce made at Madrid in 1667; and the ſaid ſubjects ſhall be treated in Spain in the ſame manner as the moſt favoured nation; and conſequently no nation ſhall pay leſs duties upon wool, and other merchandiſes which they ſhall bring into, or carry out of Spain by land, than the ſaid ſubjects ſhall pay upon the ſame merchandiſes, which they ſhall

ſhall bring in or carry out by ſea. And all the rights, privileges, franchiſes, exemptions, and immunities, which ſhall be granted and permitted to any nation whatever, ſhall alſo be granted and permitted to the ſaid ſubjects; and his Britannic Majeſty conſents that the ſame be granted and permitted to the ſubjects of Spain in his Britannic Majeſty's kingdoms.

VIII. His Catholic Majeſty promiſes to uſe all poſſible endeavours on his part, to aboliſh all innovations which may have been introduced into commerce, and to have them forborn for the future; his Britannic Majeſty likewiſe promiſes to uſe all poſſible endeavours to aboliſh all innovations, and to forbear them for the future.

IX. Their Britannic and Catholic Majeſties conform by the preſent treaty of Aix-la-Chapelle, and all the other treaties therein confirmed, in all their articles and clauſes, excepting thoſe which have been derogated from by the preſent treaty, as likewiſe the treaty of commerce concluded at Utrecht in 1713; thoſe articles excepted, which are contrary to the preſent treaty, which ſhall be aboliſhed, and of no force; and namely, the three articles of the ſaid treaty of Utrecht commonly called *explanatory*.

X. All the reciprocal differences, rights, demands, and pretenſions, which may ſubſiſt between the two crowns of Great Britain and Spain, which no other nation whatever has any part, intereſt, or right of intervention, being thus accommodated and extinguiſhed by this particular treaty; the two ſaid moſt ſerene Kings engage themſelves mutually to the punctual execution of this treaty of reciprocal compenſation, which ſhall be approved and ratified by their ſaid Majeſties, and the ratifications exchanged in the term of ſix weeks, to be reckoned from the day of its ſigning, or ſooner, if it can be done.

Treaty of commerce between Great Britain *and* Spain, *concluded at Madrid, the* 14*th of December* 1715.

Whereas, notwithſtanding the treaties of peace and commerce, lately concluded at Utrecht the 13th of July, and the 9th of December 1713, between his Catholic Majeſty, and her late Majeſty the Queen of Great Britain, of glorious memory, there remained ſtill ſome differences about trade and the courſe thereof; and his Catholic Majeſty, and the King of Great Britain, being inclined to maintain and cultivate a firm and inviolable peace and friendſhip, in order to attain to this good end, they have by their two miniſters underwritten, mutually and duly qualified, cauſed the following articles to be concluded and ſigned.

I. The Britiſh ſubjects ſhall not be obliged to pay higher or other duties, for goods coming in, or going out of the ſeveral ports of his Catholic Majeſty, than thoſe they paid for the ſame goods in King Charles II.'s time, ſettled by ſchedulas and ordinances of the ſaid King, or his predeceſſors; and although the indulto, commonly called *pie del fardo*, be not grounded on any royal ordinance, nevertheleſs his Catholic Majeſty declares, wills, and ordains, that it be obſerved, now and hereafter, as an inviolable law; which duties ſhall be exacted and raiſed, now and for the future, with the ſame advantages and favours to the ſaid ſubjects.

II. His Majeſty confirms the treaty made by the Britiſh ſubjects, with the magiſtrates of St. Andero, in the year 1700.

III. His Catholic Majeſty permits the ſaid ſubjects to gather ſalt in the iſle of Tortugas, they having enjoined this liberty in the reign of King Charles II. without interruption.

IV. The ſaid ſubjects ſhall pay no where any higher or other duties, than thoſe paid by the ſubjects of his Catholic Majeſty in the ſame places.

V. The ſaid ſubjects ſhall enjoy all the rights, privileges, franchiſes, exemptions, and immunities whatſoever, which they enjoyed before the laſt war, by virtue of the royal ſchedulas or ordinances, and by the articles of the treaty of peace and commerce made at Madrid in 1667, which is hereby fully confirmed; and the ſaid ſubjects ſhall be uſed in Spain in the ſame manner as in the moſt favoured nation, and conſequently all nations ſhall pay the ſame duties on wool and other merchandiſes coming in and going out to ſea. And all the rights, privileges, franchiſes, exemptions, and immunities, that ſhall be granted and allowed to the ſaid ſubjects, the like ſhall be granted, obſerved, and permitted to the ſubjects of Spain, in the kingdoms of his Majeſty the King of Great Britain.

VI. And as innovations may have been made in trade, his Catholic Majeſty promiſes on his part to uſe his utmoſt endeavours to aboliſh them, and for the future to cauſe them to be avoided: in like manner the King of Great Britain promiſes to uſe all poſſible endeavours to aboliſh all innovations on his part, and for the future to cauſe them by all means to be avoided.

VII. The treaty of commerce made at Utrecht, the 9th of December 1713, ſhall continue in force, except the articles that ſhall be found contrary to what is this day concluded and ſigned, which are hereby aboliſhed and rendered of no force; and eſpecially all the three articles commonly called *explanatory*. And theſe preſents ſhall be approved, ratified, and exchanged on each ſide, within the ſpace of ſix weeks, or ſooner, if poſſible. In witneſs whereof, and by virtue of our full powers, we have ſigned theſe preſents at Madrid, the 14th of December, in the year 1715.

(L. S.) M. DE BEDMAR. (L. S.) GEORGE BUBB.

Treaty of commerce betwixt Anne *Queen of* Great Britain, *and* Peter *King of* Portugal, *concluded at Liſbon, the* 27*th of December* 1703.

Whereas the league and ſtrict friendſhip which is between the moſt ſerene and moſt potent Princeſs Anne Queen of Great Britain, and the moſt ſerene and moſt potent Prince Peter King of Portugal, requires that the commerce of both the Britiſh and the Portugal nations ſhould be promoted as much as poſſible; and her ſacred royal Majeſty of Great Britain hath ſignified to his ſacred royal Majeſty of Portugal, by the moſt excellent John Methuen, Eſq; member of the Engliſh parliament, and ambaſſador extraordinary in Portugal, that it would be very acceptable to her, if the woollen cloths, and the reſt of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off: that this matter may be treated and tranſacted, they have given their full powers and commands; that is to ſay, her ſacred Majeſty of Great Britain to the aboveſaid moſt excellent John Methuen; and his ſacred Majeſty of Portugal to the moſt excellent Don Emanuel Telles Silvius, Marquis of Alegrete, &c. one of the three directors of the treaſury, and one of the firſt gentlemen of the bedchamber, and counſellor of ſtate to his ſacred royal Portugueſe Majeſty: who, by virtue of the full power to them reſpectively granted, having maturely and diligently conſidered the matter, have agreed upon the following articles.

I. His ſacred royal Majeſty of Portugal promiſes, both in his own name, and that of his ſucceſſors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the reſt of the woollen manufactures of the Britons, as was accuſtomed till they were prohibited by the laws: nevertheleſs upon this condition,

II. That is to ſay, that her ſacred royal Majeſty of Great Britain ſhall, in her own name, and that of her ſucceſſors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; ſo that at no time, whether there ſhall be peace or war between the kingdoms of Great Britain and France, any thing more ſhall be demanded for theſe wines by the name of cuſtom or duty, or by whatſoever other title, directly or indirectly, whether they ſhall be imported into Great Britain in pipes or hogſheads, or other caſks, than what ſhall be demanded from the like quantity or meaſure of French wine, deducting or abating a third part of the cuſtom or duty. But if at any time this deduction or abatement of cuſtoms, which is to be made as aforeſaid, ſhall in any manner be attempted and prejudiced, it ſhall be juſt and lawful for his ſacred royal Majeſty of Portugal, again to prohibit the woollen cloths, and the reſt of the Britiſh woollen manufactures.

III. The moſt excellent lords the plenipotentiaries promiſe and take upon themſelves, that their above named

maſters

maſters ſhall ratify this treaty, and within the ſpace of two months the ratifications ſhall be exchanged.

For the faith and teſtimony of all which things, I the plenipotentiary of her ſacred royal Majeſty of Great Britain have confirmed this treaty, by the ſubſcription of my hand, and by the ſeal of my coat of arms. And the moſt excellent lord the plenipotentiary of his ſacred royal Majeſty of Portugal, for avoiding the controverſy about precedence between the two crowns of Britain and Portugal, hath ſubſcribed another inſtrument of the ſame tenor, changing only what ought to be changed for that reaſon.

Given at Liſbon, the 27th of the month of December 1703.

(L. S.) JOHN METHUEN.

A declaration and engagement concerning the rights and privileges of the Britiſh *merchants in the kingdom of* Sicily, *made at Utrecht, the 8th of March*, N. S. 1712-13.

Whereas by ſeveral treaties of peace, alliance, commerce, and navigation, formerly made between the kingdoms of Great Britain and Spain, and at this time ſubſiſting, but more particularly by the treaty concluded at Madrid, the $\frac{13}{23}$ of May, in the year 1667, and the cedulas annexed thereunto, proviſion was made for the freedom, ſecurity, and perfect eaſe of the commerce of the Britiſh ſubjects trading in the kingdoms and provinces of Spain; the obſervance and uſage of which treaties have hitherto been received in the kingdom of Sicily, in the ſame manner as in any other the dominions of Spain, and have remained there in full force, except ſome variations which have been introduced in the courſe of time; for the rectifying whereof, according to the rule of thoſe treaties, Great Britain has juſtly inſiſted hitherto.

Wherefore, on occaſion of transferring the kingdom of Sicily to his royal highneſs the Duke of Savoy, her ſacred Majeſty of Great Britain, being watchful to preſerve the rights and privileges of her ſubjects trading in the ſaid kingdom, and being likewiſe willing to preſerve to the Sicilians the privileges they have in Great Britain, which are ſo very dear to the moſt ſerene the Duke of Savoy, hath been graciouſly pleaſed to give inſtructions to her underwritten miniſters plenipotentiaries, to agree with the miniſters plenipotentiaries of his royal highneſs of Savoy, about making declarations mutually upon this ſubject. In purſuance thereof the ſaid miniſters plenipotentiaries of his royal highneſs, in the name of their moſt ſerene maſter, do moſt ſolemnly declare and promiſe, that during the reign of the aforeſaid moſt ſerene the Duke in Sicily, as likewiſe of his heirs and ſucceſſors, the Britiſh merchants are henceforward to have, and ſhall effectually have, uſe, and enjoy, all thoſe rights, privileges, liberties, and entire ſecurity, as to their perſons, goods, ſhips, ſeamen, trade, and navigation, in the ſaid kingdom of Sicily; which, by virtue of the treaties made between Great Britain and Spain, they have hitherto enjoyed, or ought to enjoy; and, to that end, that all abuſes which deviate from the tenor of the ſaid treaties, ſhall be forthwith removed, and the rights and privileges acquired to the Britiſh ſubjects, by virtue of the aforeſaid treaties, ſhall not, on any occaſion, or under any pretence, ever be violated or leſſened. And if hitherto any more favourable privileges have been granted, or ſhall hereafter be granted to the merchants of any other foreign nation, any way relating to the perſons of the traders, their ſhips, goods, duties, or the buſineſs of merchandiſing, the Britiſh merchants ſhall likewiſe in all reſpects, and in the fulleſt manner, enjoy the ſame.

And in like manner, the miniſters plenipotentiaries of Great Britain do, in the name of her Majeſty, confirm that the Sicilians ſhall hereafter enjoy the ſame privileges and liberties which they have hitherto enjoyed, or ought to have enjoyed, as ſubjects of the King of Spain, by virtue of the aforeſaid treaty of the year 1667.

In witneſs and confirmation whereof, &c.

Treaty of amity, commerce, and navigation, between Great Britain *and* Ruſſia, *concluded at St. Peterſburgh, December* 2, 1734.

I. The peace, friendſhip, and good correſpondence, which happily ſubſiſt between their Ruſſian and Britannic Majeſties, ſhall be confirmed and eſtabliſhed by this treaty, ſo as from henceforward there ſhall be between the crown of all the Ruſſias on one ſide, and the crown of Great Britain on the other, as likewiſe between the ſtates, countries, realms, dominions, and territories, which are under their obedience, a true, firm, and perfect peace, friendſhip, and good underſtanding, which ſhall endure and be inviolably maintained for ever, as well by ſea as by land, and on all freſh waters; and the people, ſubjects, and inhabitants on both ſides, of whatſoever condition or degree, ſhall behave with entire goodwill towards each other, and give each other all poſſible aid and aſſiſtance, without doing or offering the leaſt wrong or damage whatſoever.

II. There ſhall be an entire freedom of navigation and commerce throughout all the dominions of the two contracting parties in Europe, where navigation and commerce are at this time permitted, or ſhall be permitted hereafter by the contracting parties to the ſubject of any other nation.

III. The ſubjects of both contracting parties may enter at all times into all the ports or towns of either of the contracting parties, with their ſhips, veſſels, or carriages, into which the ſubjects of any other nation are permitted to enter, to trade or abide there; and the mariners, paſſengers, and veſſels, whether Ruſſian or Engliſh, even though there be any ſubjects of any other ſtrange nation among the crew, ſhall be received and treated in like manner as the moſt favoured nation; and the mariners and paſſengers ſhall not be forced to enter into the ſervice of either of the contracting parties, which may have occaſion for their ſervice. And the ſubjects of both contracting parties may buy all kind of neceſſaries which they ſhall ſtand in need of at the current price; and repair and refit their ſhips, veſſels, or carriages, and furniſh themſelves with all manner of proviſions for their ſubſiſtence and voyage, abide and depart at their pleaſure, without moleſtation or impediment, provided they conform themſelves to the laws and ordinances of the reſpective ſtates of the ſaid contracting powers, where they ſhall ſo arrive or continue.

IV. The ſubjects of Great Britain may bring by ſea or by land, into all or any of the dominions of Ruſſia, wherein the ſubjects of any other nation are permitted to trade, all ſorts of goods and merchandiſes, whereof the importation and traffic are not prohibited; and in like manner the ſubjects of Ruſſia may bring into all or any of the dominions of Great Britain, wherein the ſubjects of any other nation are allowed to traffic, all ſorts of merchandiſes of the produce and manufacture of the dominions of Ruſſia, whereof the importation and traffic are not prohibited; and likewiſe all merchandiſes of the produce or manufacture of Aſia, provided that it is not actually prohibited by any law now in force in Great Britain; and they may buy, and export out of the dominions of Great Britain, all manner of goods and merchandiſes which the ſubjects of any other nation may buy therein, and export from thence, and particularly gold and ſilver, wrought or unwrought, excepting the ſilver coined money of Great Britain.

V. The ſubjects of Great Britain, if they happen not to have rixdollars to pay therewith the cuſtom, and other duties payable on the goods they enter, may pay in current money, at the rate of 125 copeaks for one rixdollar.

VI. Engliſh ſhips that come to load or unload merchandiſes belonging to the ſubjects of Great Britain, ſhall be uſed with all kindneſs and diſpatch, according to the regulations, without being detained in any manner whatſoever, on pain of the penalties mentioned in the regulations: and ſhould the ſubjects of Great Britain enter into any contract with any chancery, or college, for the delivery of any goods or merchandiſes, on their giving

giving notice that the ſame are ready to be delivered, they ſhall be received, agreeable to the time appointed in the contract; after which the accompt ſhall be adjuſted and ſettled, in ſuch a time as it was agreed upon in the contract between the chancery, or college, and the Engliſh merchants.

VII. It is ſtipulated, that in any town or place of Ruſſia, where any other nations are admitted, the ſubjects of Great Britain may pay for goods bought the ſame currency as has been received for goods ſold, unleſs there be any particular agreement to the contrary.

VIII. It is ſtipulated, that the ſubjects of Great Britain may bring to Ruſſia all ſorts of goods or merchandiſes, and carry them through the dominions of Ruſſia, the ſhorteſt or moſt convenient way to Perſia, paying 3 *per cent.* in rixdollars *ad valorem*, for duties and tranſit of the ſaid goods, and no more, under any pretence whatſoever. Nevertheleſs, the Engliſh merchants ſhall be obliged to agree with the Ruſſian ſubjects for the carriage-charges, either by water or by land, making them a reaſonable allowance for the ſame; and the moſt ſtrict orders ſhall be given, that the Engliſh merchants may meet with all diſpatch and eaſe upon the road. They likewiſe may bring from Perſia any goods or merchandiſes, and carry them through Ruſſia with the ſame liberty and eaſe, paying only 3 *per cent.* in rixdollars *ad valorem*, for duties and tranſit, reckoning the rixdollars as uſual in the Ruſſian cuſtoms. And in order to prevent all frauds of Engliſh ſubjects, and all vexation and delay of Ruſſian officers, Engliſh merchants ſhall declare the goods deſigned to be carried through Ruſſia, either to or from Perſia, at the firſt Ruſſian place they arrive, which ſhall be received and admitted on the bill of lading, policy, or regiſter, according to the value declared, on which a duty of 3 *per cent.* ſhall be paid, without opening or unpacking the merchandiſes, any more than is abſolutely neceſſary to ſatisfy the Ruſſian officer that the merchandiſes ſpecified in the bill of lading, policy, or regiſter, and no other, or others, are contained in the bale in which the merchandiſes are packed. But in caſe the Ruſſian officer have any grounds to ſuſpect that the goods are not declared to their right value, within 20 *per cent.* then the Ruſſian officer, paying to the merchant the value declared, and 20 *per cent.* over and above it, without any deduction, may take the goods, and diſpoſe thereof. After the Ruſſian officer's inſpection, which is to be done without vexation or detriment to the goods or package, he ſhall fix leaden ſeals to the packs, or bales, that contain the goods, number and mark them, and deliver to the merchant a certificate of the payment of the duties; and, by virtue of that certificate, leaden ſeal, mark, and number, they ſhall have a free paſſage through Ruſſia, either going to or coming from Perſia, without any obſtacle or moleſtation: but ſhould the merchants not carry any or all the bales through Ruſſia, according to the declaration, or ſhould the ſeals be taken off, and any goods taken out in Ruſſia, if there is any reaſon to ſuſpect ſuch a conduct, in oppoſition to the true ſenſe and meaning of this article, ſuch merchant ſhall be fined, and pay the whole value declared of the pack, or bale, that ſhall be wanting, or to which the ſeal ſhould not be found.

IX. It ſhall be permitted to the ſubjects of both contracting parties reciprocally, in all accuſtomed places of export, to load on board their own ſhips, veſſels, or carriages, or any other, all merchandiſes bought by them, excepting only ſuch as are prohibited to be exported, and freely to ſend or carry away the ſame, provided they have paid the duties, and ſuch ſhips, veſſels, or carriages, have been cleared according to law.

X. The ſubjects of either part ſhall pay no more cuſtom or duties, on the importation or exportation of goods, than what the ſubjects of any other nation pay for the ſame goods. And in order to prevent any frauds in the duties on either ſide, the merchandiſes which ſhall be found to have been ſmuggled in, without paying the duties, ſhall be confiſcated, and no other puniſhment inflicted on the merchant of either ſide.

XI. The ſubjects of either party may freely paſs, repaſs, or travel, in all countries which now are, or hereafter ſhall be at enmity with the other of the ſaid parties, places actually blocked up or beſieged only excepted, provided they do not carry any warlike ſtores or ammunition to the enemy: as for all other effects, their ſhips, paſſengers, and goods, ſhall be free and unmoleſted.

XII. Cannons, mortars, fire-arms, piſtols, bombs, granadoes, bullets, balls, fuzees, flints, matches, powder, ſaltpetre, ſulphur, cuiraſſes, pikes, ſwords, belts, pouches, cartouch-boxes, ſaddles, and bridles, in any quantity beyond what may be neceſſary for the ſhip's proviſion, and may properly appertain to, and be judged neceſſary for, every man of the ſhip's crew, or for each paſſenger, ſhall be deemed ammunition of war; and if any ſuch be there found, they may ſeize and confiſcate the ſame according to law; but neither the veſſels, paſſengers, or the reſt of the goods, ſhall be detained for that reaſon, or hindered from purſuing their voyage.

XIII. In caſe of a rupture between the contracting parties, which God forbid, effects or veſſels of the ſubjects of either party ſhall not be detained or confiſcated; but there ſhall be the ſpace of one year at leaſt allowed them, wherein they may ſell, diſpoſe, carry off, or ſend away their effects, and tranſport their perſons.

XIV. The merchants, mariners, veſſels, or effects of either party, ſhall not be arreſted or forced into ſervice, without their own conſent, under any pretence whatſoever; and if any ſervant, or mariner, deſerts his ſervice or veſſel, he ſhall be delivered up: but nothing contained in this article is to be ſo underſtood as to tend to the hinderance or obſtruction of the ordinary courſe of juſtice on either ſide.

XV. In caſe of wreck on any part of the dominions of the contracting parties, all ſorts of aſſiſtance ſhall be given the unfortunate, no violence ſhall be done them, nor ſhall their effects, ſaved either by themſelves or others, or drove aſhore, be hidden or detained from them; neither ſhall they be hurt, under any pretext whatſoever, but they ſhall be preſerved for them, and they ſhall pay what is reaſonable, for the aſſiſtance given to their perſons, ſhips, or effects.

XVI. Engliſh merchants may buy, build, or rent houſes, and ſell or diſpoſe of them, either at St. Peterſburgh, Moſcow, in the German Slabod, Aſtracan, and Archangel; and in thoſe places their houſes ſhall be exempted from lodging ſoldiers; in all other places they may likewiſe buy, ſell, or rent houſes; but there they ſhall be ſubject to quartering ſoldiers, equally as other inhabitants. Ruſſian merchants may alſo build, buy, or rent houſes in Great Britain or Ireland, and ſell or diſpoſe of them, provided they qualify themſelves for that purpoſe, in like manner as the ſubjects of any other the moſt favoured nations are obliged to do; and they ſhall be free of lodging ſoldiers, and have a free exerciſe of the Greek religion, either in their houſes, or any place appointed for that purpoſe.

XVII. Paſſports ſhall be given to all Engliſh ſubjects that might have a mind to retire from Ruſſia, two months after having giving notice thereof, without obliging them to give any ſecurity, if in that time there appear no juſt cauſe to detain them, without obliging them to apply for their paſſports any where elſe than to the college of commerce, or any other that may hereafter be ſubſtituted for the ſame. The ſame care and diſpatch to depart, the Ruſſian ſubjects ſhall have in the dominions of Great Britain, according to what is cuſtomary in that country on ſuch occaſions.

XVIII. Engliſh merchants that take into their ſervice, or hire any ſervants in Ruſſia, with ſuch paſſports as the court of juſtice thinks proper to regiſter, ſhall afterwards not be obliged to pay for the ſame to the maſters of thoſe ſervants, any more than what the Engliſh merchants and the ſervants agreed between them; but the Engliſh merchants ſhall not keep the ſervants longer than the time allowed them by the paſſports of their maſters, and without poker meſnoys no ſervant ſhall be taken into ſervice, or hired: and if the merchants take a ſecurity for the honeſty of the ſervant, and it happen that the ſervant do not behave well, and cheat ſome body, the merchant ſhall not anſwer for it, but the ſecurity. Ruſ-

ſian merchants ſhall have the ſame reciprocal ſecurity and juſtice in the dominions of Great Britain, for the ſervants they may there hire, agreeable to the laws of the land.

XIX. All affairs of Engliſh merchants in Ruſſia ſhall be under the cogniſance only of the college of commerce, or any other court that may be appointed hereafter, in lieu of this college, to take cogniſance of foreign merchants affairs, and no other. Ruſſian merchants in the dominions of Great Britain ſhall be under the protection of the laws of that kingdom, as all other foreigners are, and ſhall be treated as the moſt favoured nation.

XX. Engliſh merchants ſhall not be obliged to produce their books or papers to any body whatſoever, unleſs to bear witneſs in courts of juſtice; nor ſhall their books or papers be taken away and detained from them, neither ſhall their effects be diſtrained or ſold, under any pretence whatſoever, except in caſe of a bankruptcy, and then only by decree of the college of commerce, or any other court that may be hereafter appointed, in lieu of that college, to take care of the affairs of foreign merchants; and Ruſſian merchants in Great Britain ſhall be protected by the laws, as the preceding article directs.

XXI. In caſe of a law-ſuit, four reputable perſons among the foreign merchants ſhall be named by the college of commerce, to inſpect into the books and papers of the plaintiff, if the caſe require it, and their report to the college of commerce ſhall be a ſufficient evidence.

XXII. The cuſtom-houſe ſhall take care to examine the Ruſſian merchants ſervants, when they ſign bargains, whether they have orders or powers of their maſters for ſo doing: if not, they ſhall not be truſted. The ſame ſhall be obſerved in regard to the Engliſh merchants ſervants, and the bargains ſhall be for the maſter's account, who, if they have given orders or powers to their ſervants, ſhall then be anſwerable as if they had made the bargain themſelves. All Ruſſian ſervants employed in ſhops ſhall alſo be regiſtered, and their tranſactions.

XXIII. If any Ruſſian merchants indebted to Engliſh merchants, quit the place where they lived, and retire into the country, and it happen that during their abſence petitions be brought againſt them, proving the debt, then the college of commerce ſhall ſummon them thrice, allowing a ſufficient time for their appearance before the college; but ſhould they not appear, the college ſhall condemn them, and ſend an expreſs, at the charge of the plaintiff, to the governors, with orders to put the ſentence in execution, obliging the debtor to pay his debt.

XXIV. The Ruſſian merchants that come with their goods ſhall enter them as ſoon as poſſible at the cuſtom-houſe; and, when ſold, ſhall write down the quantity, weight, and meaſure, as the regulations direct.

XXV. The bracks ſhall be equitably eſtabliſhed, and ſet in good order; the brackers ſhall be anſwerable for the quality of the goods, and falſe package, and ſubject to pay the loſſes, on proof being brought againſt them.

XXVI. Regulations ſhall be eſtabliſhed for removing abuſes which there may be in the package of hides and threads; in the interim, if any diſpute ariſe between buyer and ſeller, in regard to the tare of any goods, the cuſtomhouſe ſhall decide it, according to reaſon and equity.

XXVII. For a greater convenience and encouragement of the trade of Great Britain, it is agreed that the following Engliſh woollen goods ſhall hereafter pay no more duty than what is ſet down in this article, *viz.* Engliſh cloth for ſoldiers ſhall pay no more than two copeacs, in rix-dollars, for each archine; the coarſe cloth of the county of York, known in the Ruſſian tariff by the name of koſtrogi, ſhall pay no more than two copeacs, in rix-dollars, for each archine; broad flannels, only one copeac, in rix-dollars, for each archine; and narrow flannels, but three quarters of a copeac, in rix dollars, for each archine.

XXVIII. It is agreed and concluded, that the ſubjects of both parties ſhall be reſpected and treated, in their reſpective dominions, in like manner as the moſt favoured nation; and the ſubjects of Ruſſia which ſhall come into England, in order to learn arts and commerce there, ſhall be protected, favoured, and inſtructed: likewiſe, if any Ruſſian veſſels ſhall be met with out at ſea by any Engliſh veſſels, they ſhall in no wiſe be hindered or moleſted by them, provided they comport themſelves in the Britiſh ſeas in the accuſtomed manner; but, on the contrary, they ſhall be favoured by them, and that in the very ports or havens belonging to the dominions of Great Britain.

XXIX. Peace, amity, and good underſtanding, ſhall continue for ever between the contracting parties; and as it is uſual to limit treaties of commerce for a certain ſpace of time, it is agreed between the contracting parties that this ſhall continue for the ſpace of fifteen years, to be computed from the day of ſigning this preſent treaty; and that before the expiration of the ſaid term, they ſhall come to a further mutual agreement for renewing and prolonging the ſame.

Articles of peace and commerce between the moſt high and renowned Prince George II. *&c. and the moſt high and glorious, mighty, and right noble Prince* Muley Hammet Dahebby, Ben Muley Iſmael, Ben Muley Zeriph, Ben Muley Aly, *King and Emperor of the kingdom of* Fez *and* Morocco, *&c. January* 14, 1728.

I. That all Moors or Jews ſubject to the Emperor of Morocco ſhall be allowed a free traffic, *viz.* to buy or ſell for thirty days in the city of Gibraltar, or iſland of Minorca, and not to reſide in either place, but to depart with their effects, without lett or moleſtation, to any part of the ſaid Emperor of Morocco's dominions.

II. That the King of Great Britain's ſubjects reſiding in Barbary ſhall not be obliged to appear before the cadi, or juſtice of the country; but only the governor of the place, and his Britannic Majeſty's conſuls, are to take cogniſance of, and adjuſt the differences they may have with the natives of the country.

III. That the menial ſervants of his Britannic Majeſty's ſervants, though natives of the country, either Moors or Jews, be exempt from taxes of all kinds.

IV. That all his Britannic Majeſty's ſubjects, as well paſſengers as others, taken by any of the Emperor of Fez and Morocco's cruizers, on board any foreign ſhip or veſſel whatever, ſhall immediately be ſet at liberty, and ſent to the city of Gibraltar.

V. That there be permiſſion for buying proviſions, and all other neceſſaries, for his Britannic Majeſty's fleet, or city of Gibraltar, at any of the Emperor of Fez and Morocco's ſea ports, at the market prices, and the ſame to be ſhipped off without paying cuſtom, as has been extorted lately, contrary to the treaty of peace ſubſiſting.

VI. All the other articles, being fifteen in number, concluded, agreed, and adjuſted by the honourable Charles Steward, Eſq; on the behalf of his Britannic Majeſty; and by his excellency baſhaw Hamet Ben Aly, Ben Abdalla, and his imperial Majeſty's treaſurer, Mr. Moſes Ben Hatter, a Jew, on behalf of the ſaid King of Fez and Morocco, ſhall ſtand good, and be of the ſame force, as in the reign of the moſt high and renowned Prince George I. King of Great Britain, &c. of glorious memory, and the high and glorious, mighty and right noble Prince Albumazer Muley Iſmael, late Emperor of Morocco. And it is farther agreed, that all the articles aforementioned, as well the fifteen, as theſe additional ones, ſhall, in twenty days after the date hereof, be publiſhed in the Arabic language, and affixed on the gates of all the ſea-port towns in his imperial Majeſty's dominions.

Signed and dated at the court of Mequinez, January 14, 1727-8.

A treaty of peace and friendſhip between the King of Great Britain, *and the Emperor of* Morocco, *in* 1751.

George II. by the grace of God, King of Great Britain, &c. Duke of Brunſwic and Lunenburg, arch-treaſurer, and prince elector, of the holy Roman empire, &c. to all to whom theſe preſents ſhall come, greeting: whereas a treaty for eſtabliſhing peace and friendſhip was concluded and ſigned on the 15th of December 1734, and copied the 15th of Rabbei the firſt, in the year 1164, which is, in Engliſh ſtyle, the 15th day of January 1750, O.S. and the

the additional articles of peace and commerce, concluded and ſigned at the court of Fez, on the 1ſt of February 1751, N. S. between us and the high, glorious, potent, and noble prince, Mulay Abedela, Ben Mulay Iſmael, Ben Mulay Seriph, Ben Mulay Aly, King and Emperor of the kingdoms of Fez, Morocco, &c. by William Petticrew, Eſq; our conſul-general, on our part, and by the alcaide Habed Lohah Ben Hamed Limury, firſt miniſter, on the behalf, and by order of, the ſaid King of Fez and Morocco, in the words and form following.

Treaty of peace between his Majeſty George II. *King of* Great Britain, *&c. and* Mulay Abedela Ben Iſmael, *King and Emperor of* Fez, Mequinez, Morocco, *&c.*

I. For eſtabliſhing peace and friendſhip, it is agreed and concluded for firm and valid, both by land and ſea, in all the dominions of both powers, that the Engliſh in general ſhall and may now, and at all times hereafter, enjoy and continue in peace and friendſhip with the Emperor and his ſubjects, and be well uſed and reſpected by the Emperor's ſubjects, agreeable to the order and commands of the emperor.

II. That ſuch number or quantity of paſſports as may be neceſſary, be tranſmitted to the Emperor, indented in ſuch manner as ſhall tally with the paſſports that ſhall be received by the Engliſh merchants in England; and if an Engliſh man of war meets with any merchant-ſhips belonging to the Emperor, ſuch merchant-ſhips ſhall be obliged to produce and ſhew their paſſports, given to them by the Engliſh conſul.

III. If any diſpute ſhall happen between the Engliſh and the Emperor's ſubjects, the ſame not to be determined by a judge, but ended and adjuſted by the Engliſh conſul and the coyed, that is, the mayor of the town where ſuch diſpute ſhall happen.

IV. That none of the Emperor's ſubjects ſhall, at any time, forcibly enter the houſes of the Engliſh, or any place belonging to them, or take and carry away any of their goods and effects, unleſs they have leave and authority from the emperor ſo to do: that if any of the emperor's ſubjects ſhall hire any Engliſh ſhip to carry and convey goods from one part of the emperor's dominions to another, and ſhall happen by ſtreſs of weather, or any other occaſion, to touch at any place or places in the voyage, ſuch ſhip or ſhips ſhall not be obliged to pay any thing for the ſhelter or aſſiſtance they may receive; and that no Engliſh whatever, or any of their ſervants, tho' not Engliſh, ſhall be liable to pay the tax impoſed upon the Emperor's ſubjects, called the poll-tax.

V. That the fifteen articles of peace made and concluded between king George I. and Muli Iſmael, are hereby agreed to and confirmed, with his Majeſty king George II. as good and valid, and ſhall be faithfully kept and obſerved, together with the aforeſaid four articles.

Treaty of peace between his Majeſty George II. *King of* Great Britain, *&c. and* Mulay Abedela Ben Iſmael, *king and emperor of* Fez, Mequinez, Morocco, &c.

I. That if any Engliſh ſhall happen to be on board any ſhip or ſhips, enemies to the emperor, that may be taken by the emperor's ſhips, ſuch Engliſh ſhall be well treated, delivered into the hands of the Engliſh conſul, and have liberty to go where they pleaſe: this article to continue in force for ſix months from the concluſion of this peace; in which time, it is required that notice ſhall be given by the king of Great Britain to all the Engliſh ſubjects, not to embark on board any of the emperor's enemies ſhips; for after that time, if the Engliſh ſhall ſo embark, the blame muſt be their own, as no regard will be had to them more than the emperor's enemies.

II. If any of the emperor's ſubjects ſhall be made ſlaves, and eſcape to an Engliſh man of war, or to Gibraltar, Port Mahon, or any of the Engliſh dominions, that they ſhall be protected, and with all convenient ſpeed ſent to their reſpective homes. The like treatment to be given to the Engliſh who ſhall be ſlaves, and eſcape to any part of the emperor's dominions.

III. If any Engliſh ſhall contract any thing to be paid to the emperor's ſubjects, notes ſhall be given for the ſame; and in like manner the ſame to be obſerved by the emperor's ſubjects in the Engliſh dominions; and if it ſhall happen that ſuch ſubjects of either power cannot write, to get ſome perſon to write ſuch notes for them.

IV. That no excuſe be made, or ignorance of this peace pretended, the ſame ſhall be publiſhed and declared to all the ſubjects of both powers, both what is now agreed on, and the articles concluded with king George the Firſt; which declaration ſhall be ſigned by each power, and by them kept, to prevent diſputes. This treaty was concluded the 15th of December 1734, and copied the 15th of Rabbei the firſt, in the year 1164, which is, in Engliſh ſtile, the 15th of January 1750.

Additional articles of peace and commerce between the moſt high, illuſtrious, and moſt renowned prince Geo. II. *&c. and the high, glorious, mighty, and moſt noble prince,* Mulay Abedela, Ben Mulay Iſmael, Ben Mulay Seriph, Ben Mulay Aly, *king and emperor of the kingdoms of* Fez, Morocco, Taffilete, Sus, *&c.*

I. It is agreed on and concluded, that from henceforward there ſhall be, between his Majeſty of Great Britain, prince and elector of Hanover, &c. and the king of Fez and Morocco, their heirs and ſucceſſors, a general, true, and perfect peace for ever, as well by land as by ſea and freſh waters; and alſo between the lands, kingdoms, dominions, and territories belonging to, or under the juriſdiction of his Britannic Majeſty in Germany, and thoſe appertaining to the king of Fez and Morocco; and their ſubjects, people, or inhabitants reſpectively, of what condition, degree, or quality ſoever, from henceforth reciprocally ſhall owe the other all friendſhip; and that all ſhips, veſſels, paſſengers with their effects, trafficking voluntary, or compelled by enemies, diſaſters of the ſeas, or any accident whatſoever, to the coaſts of the emperor of Fez and Morocco's dominions, being his Britannic Majeſty's ſubjects in Germany, ſhall from henceforth be treated according to the ſaid regulations as ſpecified by the treaties of peace now ſubſiſting between his Britannic Majeſty and the king of Fez and Morocco.

II. It is agreed that all ſhips and veſſels belonging to his Britannic Majeſty in Germany, ſhall carry a proper paſs, and that a copy of ſuch paſs, with the heads of the ſaid paſſes, ſhall be ſent to his Britannic Majeſty's conſul reſiding in Barbary, to the end that he may deliver the ſame to the commanders, or captains, of the king of Fez and Morocco's ſhips of war, or cruizers, to the end that due regard may be had to this peace, and that no commander or captain may offend through ignorance; and all commanders or captains of ſhips or veſſels belonging to his Britannic Majeſty's ſubjects in Germany, meeting with any ſhip or veſſel belonging to the king of Fez and Morocco, or his ſubjects, if the commander of ſuch ſhip or veſſel produce a paſs, ſigned by the governor of the city they belong to, with a certificate from the Engliſh conſul, and, in caſe of his death or abſence, from the major part of the Engliſh merchants reſiding in the ſaid place, in ſuch caſes, the ſaid ſhip or veſſel ſhall purſue freely her voyage, without hinderance or moleſtation.

III. It is agreed that the king of Great Britain's ſubjects ſhall not be obliged to appear before juſtices of the country in any cauſe, but that only the governor of the city, and his Britannic Majeſty's conſul, ſhall take cognizance of, and adjuſt the difference or ſuits they may have with the Moors, or other inhabitants in the dominions of the king of Fez and Morocco.

IV. It is agreed that no governor or officer under the king of Fez and Morocco ſhall, without the king's ſpecial order, viſit or regiſter the dwelling-houſes or magazines of any of his Britannic Majeſty's ſubjects reſiding in Barbary; and that all Britiſh ſhips taking freight in any port of the king of Fez and Morocco, to carry to other ports of the ſaid kingdom, ſhall be exempted from all port charges, as uſual, in whatever port they may put in; and that the conſul, and the other Britiſh merchants, ſhall be freely allowed to have Moors, or Jews, as their in-

terpreters and brokers, who ſhall be exempted from all taxes, as likewiſe all their domeſtic ſervants.

All the other articles, being fifteen in number, concluded, agreed, and adjuſted, by the admiral Charles Stewart, on the behalf of his Britannic Majeſty, and by his excellency baſhaw Hamet Ben Aly Ben Abdalla, and his Imperial Majeſty's treaſurer, Mr. Moſes Benatar, on behalf of the ſaid king of Fez and Morocco, ſhall ſtand good, and be of the ſame force, as in the reign of the moſt high, illuſtrious, and renowned prince, George the Firſt, king of Great Britain, &c. of glorious memory, and the high, mighty, and moſt noble prince, Mulay Iſmael, late emperor of Morocco; as likewiſe the other articles, being three in number, agreed and concluded by John Leonard Sollicoffree, Eſq; on behalf of his Britannic Majeſty, and his excelleney baſhaw Hamet Ben Aly Ben Abdalla, on behalf of the king of Fez and Morocco.

It is agreed on and concluded, that all the articles aforementioned, being eighteen in number, with theſe additional articles, that are tranſlated into the Arabic language, copies thereof be ſent to all his Imperial Majeſty's alcaides, and officers of all the ports in his dominions, there to be read by the cadi, or chief juſtice, in public aſſembly, and afterwards to remain depoſited, either in the hands of the judge, or the alcaide of the port, that recourſe may be had thereto on all occaſions which may occur; and that the ratifications of the ſaid articles ſhall be made within the term of ſix months, or ſooner, if poſſible, in Spaniſh, which ſhall be received, and be of equal force. Dated and ſigned at the court of Fez, on the 1ſt of February, 1751, N. S.

Signed ABDELHOVAH ALY MOORY.

Treaty of peace between his Majeſty George I. *king of* Great Britain, *&c. and* Muli Iſmael, *ſon of* Muli Aly Sherife, *king of* Fez, Mequinez, Morocco, *&c.*

I. In order to eſtabliſh peace between the powers, both by land and ſea, and all their reſpective dominions, it is agreed on, that the Engliſh may now, and always hereafter, be well uſed and reſpected by our ſubjects, agreeable to the orders and commands of the emperor.

II. That all Engliſh men of war and merchant ſhips, that ſhall come to any part of the emperor's dominions, to trade or otherwiſe, and ſhall have on board a cargo not proper for vending in the place where they ſhall come, may depart with the ſame to any other part of the emperor's dominions, and ſhall pay duty but once for the ſame; and that no duty at all ſhall be paid for any war implements, ſuch as fire-arms, ſwords, and any thing belonging to the army, as alſo for materials of all kinds for ſhip-building; and if any Engliſh ſhip ſhall arrive at any of the emperor's ports, with any merchandiſe deſtined for any other part of the world, that no duty ſhall be paid for ſuch merchandiſe, but ſhall depart with the ſame, without any manner of moleſtation. If any Engliſh ſhip ſhall be thrown upon the emperor's coaſts by ſtreſs of weather, or otherwiſe, the ſame ſhall be protected, and may ſafely depart, without any ill uſage or interruption. In like manner ſhall be treated the emperor's ſubjects happening to be thus thrown on the coaſt of Great Britain, or the dominions thereto belonging.

III. That all the Engliſh ſhips and emperor's ſhips may paſs and repaſs the ſeas without hinderance, interruption, or moleſtation, from each other; nor ſhall any money, merchandiſe, or any demand be made or taken, by the ſhips of either power from each other; and if any ſubjects of any other nation ſhall be on board either the Engliſh or the emperor's ſhips, they ſhall be ſafely protected by both parties.

IV. If the emperor's men of war meet with any Engliſh ſhips, and ſhall want to ſee their paſſports, they are to ſend a boat, with two men of fidelity, to peruſe the ſaid paſſports, who are to return without any further trouble, and then both ſides to proceed quietly on their reſpective voyages; the ſame uſage to be received by the emperor's merchant ſhips from the Engliſh men of war, who ſhall allow the paſſports made out by the Engliſh conſul, and, if the conſul ſhall not be preſent to make them, then the paſſports made out by the Engliſh merchants to be good and valid.

V. If the Engliſh men of war, privateers, or letter of marque ſhips, ſhall take prizes from any nation with whom they ſhall be at war, they ſhall have liberty to bring and diſpoſe of the ſame in any of the emperor's dominions, without any duty or charge whatſoever.

VI. If any Engliſh ſhip ſhall by ſtorm, or in flying from her enemy, come upon the emperor's coaſts, the ſame ſhall be ſafely protected, and nothing touched and taken away; but ſhall be under the direction of the Engliſh conſul, who ſhall ſend the goods and people where he ſhall think fit.

VII. It is the mutual agreement of the king of Great Britain and the emperor, that the emperor do iſſue out orders to all parts of his dominions, for the well uſing of all the Engliſh ſubjects, and that particular places be appointed for the burial of their dead; that the conſul's brokers ſhall freely go on board any ſhip, without interruption; that the Engliſh conſuls, merchants, and other ſubjects of Great Britain, may ſafely travel by land with effects, without any hindrance whatever; and if any Engliſh ſettled in the emperor's dominions ſhall be deſirous to return home, that they may ſo do, with their families, goods, and effects, without interruption: if any Engliſh die, the effects of ſuch to be taken under the care of the conſul, to be diſpoſed of as directed by the will of ſuch perſon, and, if no will, for the benefit of ſuch perſon's next heir; and if any debts ſhall be owing to ſuch deceaſed perſon, the ſame to be paid by order of the governor, or any other perſon in power, where ſuch perſon ſhall die; and that a ſubject of the emperor's be appointed to demand and receive the ſame, and depoſit the ſame in the hands of the Engliſh conſul, for the aforeſaid uſes. If any Engliſh ſhall contract debts in the emperor's country, and remove from thence without ſatisfying the ſame, no other perſons ſhall be liable to pay ſuch debts. The like uſage and treatment the ſubjects of the emperor are to receive in the king of Great Britain's dominions; and that the king may ſend as many conſuls to the emperor's dominions as he ſhall think neceſſary.

VIII. That no Engliſh merchant, captains of ſhips, or other perſon or perſons whatſoever, that are Engliſh ſubjects, ſhall be forced to ſell any of their goods for leſs than the real value; and that no captain, matter, or commander of any Engliſh ſhip ſhall be compelled, without their own will and conſent, to carry any goods or merchandiſes for any perſon or perſons whatſoever; nor ſhall any ſailor be forced away from any Engliſh ſhip.

IX. If any quarrel or diſpute ſhall happen between any Engliſhman and a Muſſelman, by which hurt to either may enſue, the ſame to be heard before, and determined by the emperor only; and if an Engliſhman, who may be the aggreſſor, ſhall make his eſcape, no other Engliſhman ſhall ſuffer upon his account; and if two Engliſhmen ſhall quarrel, to be determined by the Engliſh conſul, who ſhall do with them as he pleaſes: and if any quarrel or diſpute ſhall happen ſhall happen between Muſſelmen in England, or in any of the Engliſh dominions, by which hurt may enſue, the ſame to be heard before one Chriſtian and one Muſſelman, and to be determined according to the laws of Great Britain.

X. If it ſhall happen that this peace, by any means, ſhall be broke, the conſul, and all other Engliſh, ſhall have ſix months time to remove themſelves, with their families and effects, to any place they pleaſe, without interruption, and that all debts owing to them ſhall be juſtly paid to them.

XI. If any Engliſh in the emperor's dominions, or the emperor's ſubjects in the Engliſh dominions, ſhall maliciouſly endeavour to break the peace, ſuch of them who ſhall be proved ſo to intend, ſhall by each power be puniſhed for ſuch offence, each power to take cognizance of their own ſubjects.

XII. If any of the emperor's ſubjects ſhall purchaſe any commodity in the Engliſh dominions, they ſhall not be impoſed on in price, but pay the ſame as is ſold to the Engliſh.

XIII. That

XIII. That not any of the Spaniſh, whether captains, ſailors, or other perſons, under the Engliſh government in Gibraltar or Port Mahon, ſhall be taken or moleſted, ſailing under Engliſh colours, with paſſports.

XIV. That no excuſe bemade, or ignorance pretended, of this peace, the ſame ſhall be publiſhed and declared to all the ſubjects of each power; which declaration ſhall be ſigned by each power, and kept by them, to prevent diſputes.

XV. If any man of war ſhall be on the emperor's coaſts, that are enemies to the Engliſh, and any Engliſh men of war, or other Engliſh ſhips, ſhall happen to be, or arrive there alſo, that they ſhall not in any manner be hurt, or engaged by their enemy; and when ſuch Engliſh ſhips ſhall ſail, their enemies ſhips ſhall not ſet ſail under forty hours afterwards.

And if, after the concluſion of this peace, any ſhip ſhall happen to be taken by either power, within ſix months after the proclamation of the peace, that the ſame, with the people and effects, ſhall be reſtored. Made and declared in the preſence of the emperor's ſervant, Ahammad Baſha, ſon of Alli, ſon of Abdulla, by the authority given to him by the emperor. Dated this 23d of January, in the year 1721, Engliſh ſtile. Wrote and given to Charles Stewart, Eſq; the Engliſh ambaſſador, in the ſeventh year of the reign of our late royal father, king George the Firſt.

We having ſeen and conſidered the above-written treaty, with the additional articles, have approved, ratified, and confirmed the ſame, in all and ſingular their clauſes, as by theſe preſents we do approve, ratify, and confirm the ſame, for us, our heirs and ſucceſſors, engaging and promiſing, on our royal word, ſacredly and inviolably to perform and obſerve all and ſingular their contents, and never to ſuffer, as far as in us lies, any perſon to violate the ſame, or in any manner to act contrary thereto. In witneſs whereof, we have cauſed our great ſeal of Great Britain to be affixed to theſe preſents, ſigned with our own royal hand. Given at our court at Kenſington, the thirty-firſt day of July, in the year of our Lord 1751, and of our reign the twenty-fifth.

GEORGE R.

Articles of peace and commerce between the moſt ſerene and mighty prince Charles II. *by the grace*, &c. *and moſt illuſtrious lords the baſha, dey, and aga, governors of the famous city and kingdom of* Algiers, *&c. concluded by* Arthur Herbert, *Eſq; admiral of his Majeſty's fleet*, April 10, *O. S.* 1682. *With the few alterations made and included at the renewal thereof in* 1686: *all which are, for diſtinction, in a different character.*

I. In the firſt place it is agreed and concluded, That from this day, and for ever forwards, there be a true, firm, and inviolable peace between the moſt ſerene king of Great Britain, France, and Ireland, &c. and the moſt illuſtrious lords the baſha, dey, and aga, governors of the city and kingdom of Algiers, and between all the dominions and ſubjects of either ſide; and that the ſhips, or other veſſels, and the ſubjects and people of both ſides, ſhall not henceforth do to each other any harm, offence, or injury, either in word or deed, but ſhall treat one another with all poſſible reſpect and friendſhip; and that all demands and pretenſions whatſoever, to this day, between both parties, ſhall ceaſe and be void.

II. That any of the ſhips, or other veſſels, belonging to the ſaid king of Great Britain, &c. or to any of his Majeſty's ſubjects, may ſafely come to the port of Algiers, or to any other port or place of that kingdom, there freely to buy and ſell, paying the uſual cuſtoms of 10 *per cent.* as in former times, for ſuch goods as they ſell; and the goods they ſell not, they ſhall freely carry on board, without paying any duties for the ſame: and that they ſhall freely depart from thence whenſoever they pleaſe, without any ſtop or hinderance whatſoever; as to contraband merchandiſes, as powder, brimſtone, iron, planks, and all ſorts of timber fit for building of ſhips, ropes, pitch, tar, fuſils, and other habiliments of war, his ſaid majeſty's ſubjects ſhall pay no duty for the ſame to thoſe of Algiers.

III. That all ſhips, and other veſſels, as well thoſe belonging to the ſaid king of Great Britain, or to any of his majeſty's ſubjects, as thoſe belonging to the kingdom or people of Algiers, ſhall freely paſs the ſeas, and traffic, without any ſearch, hinderance, or moleſtation, from each other; and that all perſons, or paſſengers, of what country ſoever, and all monies, goods, merchandiſes, and moveables, to whatſoever people or nation belonging, being on board any of the ſaid ſhips or veſſels, ſhall be wholly free, and ſhall not be ſtopped, taken, or plundered, nor receive any harm or damage whatſoever from either party.

IV. That the Algiers ſhips of war, or other veſſels, meeting with any merchant-ſhips, or other veſſels, of his ſaid Majeſty's ſubjects, not being in any of the ſeas appertaining to his Majeſty's dominions, may ſend on board one ſingle boat, with two ſitters only, beſides the ordinary crew of rowers, and that no more ſhall enter any ſuch merchant ſhip, or veſſel, without expreſs leave from the commander thereof, but the two ſitters alone; and, upon producing a paſs under the hand and ſeal of the lord high admiral of England and Ireland, or of the lord high admiral of Scotland, for the ſaid kingdoms reſpectively, or under the hands and ſeals of the commiſſioners for executing the office of lord high admiral of any of the ſaid kingdoms, that the ſaid ſhip ſhall proceed freely on her voyage; and that although for the ſpace of 15 months next enſuing after the concluſion of this peace, the ſaid commander of the merchant ſhip, or veſſel, produces no ſuch paſs, yet if the major part of the ſeamen of the ſaid ſhip, or veſſel, be ſubjects of the ſaid king of Great Britain, the ſaid boat ſhall immediately depart, and the ſaid merchant ſhip, or veſſel, ſhall freely proceed on her voyage; but that, after the ſaid fifteen months, all merchant ſhips, or veſſels, of his ſaid Majeſty's ſubjects, ſhall be obliged to produce ſuch a paſs as aforeſaid. And any of the ſhips of war of his ſaid Majeſty, meeting with any ſhips, or other veſſels of Algiers, if the commander of any ſuch ſhip or veſſel ſhall produce a paſs, confirmed by the chief governors of Algiers, and a certificate from the Engliſh conſul there reſiding, or, if they have no ſuch paſs, or certificate, yet if, for the ſpace of fifteen months next enſuing the concluſion of this peace, the major part of the ſhip's company be Turks, Moors, or ſlaves belonging to Algiers, then the ſaid Algiers ſhips or veſſels ſhall proceed freely; but that, after the ſaid fifteen months, all Algiers ſhips or veſſels ſhall be obliged to produce ſuch a paſs and certificate as aforeſaid. *The only alteration in this, regards the fifteen months term allowed for paſſes*, &c.

V. That no commander, or other perſon, of any ſhip or veſſel of Algiers, ſhall take out of any ſhip or veſſel of his ſaid Majeſty's ſubjects, any perſon or perſons whatſoever, to carry them any where to be examined, or upon any other pretence; nor ſhall they uſe any torture or violence to any perſon, of what nation or quality ſoever, being on board any ſhip or veſſel of his ſaid Majeſty's ſubjects, upon any pretence whatſoever.

VI. That no ſhipwreck belonging to the ſaid king of Great Britain, or to any of his ſubjects, upon any part of the coaſt belonging to Algiers, ſhall be made, or become prize; and that neither the goods thereof ſhall be ſeized, nor the men made ſlaves, but that all the ſubjects of Algiers ſhall uſe their beſt endeavours to ſave the ſaid men and their goods.

VII. That no ſhip, or any other veſſel of Algiers, ſhall have permiſſion to be delivered up, or go to Sallee, or any place in enmity with the ſaid king of Great Britain, to be made uſe of as corſairs, or ſea-rovers, againſt his ſaid Majeſty's ſubjects.

VIII. That none of the ſhips, or other ſmaller veſſels of Algiers, ſhall remain cruizing near, or in ſight of his Majeſty's city and garriſon of Tangier, or of any other his Majeſty's roads, havens, ports, towns, and places, nor any way diſturb the peace and commerce of the ſame. *Tangier now omitted.*

IX. That if any ſhip or veſſel, of Tunis, Tripoly, or Sallee, or of any other place, bring any ſhips, veſſels, men, or goods, belonging to any of his ſaid Majeſty's ſubjects to Algiers, or to any port or place in that king-

dom, the governors there ſhall not permit them to be ſold within the territories of Algiers.

X. That if any of the ſhips of war of the ſaid king of Great Britain do come to Algiers, or to any other port or place of that kingdom, with any prize, they may freely ſell it, or otherwiſe diſpoſe of it, at pleaſure, without being moleſted by any: and that his ſaid Majeſty's ſhips of war ſhall not be obliged to pay cuſtoms in any fort; and that if they ſhall want proviſions, victuals, or any other things, they may freely buy them at the rates in the market.

XI. That when any of his ſaid Majeſty's ſhips of war ſhall appear before Algiers, upon notice thereof given by the Engliſh conſul, or by the commander of the ſaid ſhips, to the chief governors of Algiers, public proclamation ſhall be immediately made to ſecure the Chriſtian captives: and if after that, any Chriſtians whatſoever make their eſcape on b ard any of the ſaid ſhips of war, they ſhall not be required, nor ſhall the ſaid conſul or commander, or any other of his Majeſty's ſubjects, be obliged to pay any thing for the ſaid Chriſtians.

XII. That from and after the time that the ratification of this treaty by the king of Great Britain, ſhall be delivered to the chief governors of Algiers, no ſubjects of his ſaid Majeſty ſhall be bought or ſold, or made ſlaves in any part of the kingdom of Algiers, upon any pretence whatſoever. And the ſaid king of Great Britain ſhall not be obliged, by virtue of this treaty of peace, to redeem any of his ſubjects now in ſlavery, or who may be made ſlaves before the ſaid ratification, but it ſhall depend abſolutely upon his Majeſty, or the friends and relations of the ſaid perſons in ſlavery, without any limitation or reſtriction of time, to redeem ſuch, or ſo many of them, from time to time, as ſhall be thought fit, agreeing for as reaſonable a price as may be, with their patrons or maſters, for their redemption, without obliging the ſaid patrons or maſters, againſt their wills, to ſet any at liberty, whether they be ſlaves belonging to the beylic, or public, the gallies, or ſuch as belong particularly to the baſha, dey, aga, or any other perſons whatſoever. And all ſlaves, being his Majeſty's ſubjects, ſhall, when they are redeemed, enjoy the abatements of the duty due to the royal houſe, and of the other charges, by paying ſuch reaſonable ſums as any ſlaves of other nations uſually pay when they are redeemed.

XIII. That if any ſubject of the ſaid king of Great Britain happen to die in Algiers, or in any part of its territories, his goods or monies ſhall not be ſeized by the governors, judges, or other officers of Algiers, who likewiſe ſhall not make any enquiry after them: but the ſaid goods or monies, ſhall be received and poſſeſſed by ſuch perſon or perſons, whom the deceaſed ſhall by his laſt will, have made his heir or heirs, in caſe they be upon the place where the teſtator deceaſed. But if the heirs be not there, then the executors of the ſaid will, lawfully conſtituted by the deceaſed, ſhall, after having made an inventory of all the goods and monies left, take them into their cuſtody without any hinderance, and ſhall take care the ſame be remitted by ſome ſafe way, to the true and lawful heirs; and in caſe any of his ſaid Majeſty's ſubjects happen to die, not having made any will, the Engliſh conſul ſhall poſſeſs himſelf of his goods and monies, upon inventory, for the uſe of the kindred and heirs of the deceaſed.

XIV. That no merchants, being his Majeſty's ſubjects, and reſiding in or trading to the city and kingdom of Algiers, ſhall be obliged to buy any merchandiſes againſt their wills, but it ſhall be free for them to buy ſuch commodities as they ſhall think fit: and no captain, or commander of any ſhip or veſſel belonging to his ſaid Majeſty's ſubjects, ſhall be obliged againſt his will, to lade any goods to carry them, or make a voyage to any place whither he ſhall not have a mind to go. And neither the Engliſh conſul, nor any other ſubject of the ſaid king, ſhall be bound to pay the debts of any other of his Majeſty's ſubjects, except that he or they become ſureties for the ſame, by a public act.

XV. That the ſubjects of his ſaid Majeſty in Algiers, or its territories, in matter of controverſy, ſhall be liable to no other juriſdiction but that of the dey, or the divan, except they happen to be at difference between themſelves, in which caſe they ſhall be liable to no other determination but that of the conſul only.

XVI. That in caſe any ſubject of his ſaid Majeſty, being in any part of the kingdom of Algiers, happen to ſtrike, wound, or kill a Turk, or a Moor, if he be taken, he is to be puniſhed in the ſame manner, and with no greater ſeverity than a Turk ought to be, being guilty of the ſame offence; but if he eſcape, neither the ſaid Engliſh conſul, nor any other of his ſaid Majeſty's ſubjects, ſhall be in any fort queſtioned and troubled therefore.

XVII. That the Engliſh conſul now, or at any time hereafter, reſiding at Algiers, ſhall be there, at all times, with entire freedom and ſafety of his perſon and eſtate, and ſhall be permitted to chuſe his own terjiman, interpreter, and broker, and freely to go on board any ſhips in the road, as often and when he pleaſes, and to have the liberty of the country; and that he ſhall be allowed a place to pray in, and that no man ſhall do him an injury, in word or deed.

XVIII. That not only during the continuance of this peace and friendſhip, but likewiſe, if any breach of war happens hereafter to be between the ſaid king of Great Britain and the kingdom of Algiers, the ſaid Engliſh conſul, and all others his ſaid Majeſty's ſubjects, inhabiting in the kingdom of Algiers, ſhall, always and at all times, both of peace and war, have full and abſolute liberty to depart and go to their own, or any other country, upon any ſhip or veſſel, of what nation ſoever they ſhall think fit, and to carry with them all their eſtates, goods, families, and ſervants, without any interruption or hinderance.

XIX. That no ſubject of his ſaid Majeſty, being a paſſenger, and coming or going with his baggage, from or to any port, ſhall be any ways moleſted or meddled with, although he be on board any ſhip or veſſel in enmity with Algiers; and in like manner, no Algerine paſſenger, being on board any ſhip or veſſel in enmity with the ſaid king of Great Britain, ſhall be any way moleſted, whether in his perſon or in his goods, which he may have laden on board the ſaid ſhip or veſſel.

XX. That at all times, when any ſhip of war of the king of Great Britain's, carrying his ſaid Majeſty's flag at the main-top-maſt head, ſhall appear before Algiers, and come to an anchor in the road, immediately upon notice thereof given by his Majeſty's conſul, or ſome officer from the ſhip, to the dey and regency of Algiers, they ſhall, in honour to his Majeſty, cauſe a ſalute of 21 cannon to be ſhot off, from the caſtles and forts of the city, and that the ſaid ſhip ſhall return an anſwer by ſhooting off the ſame number of cannon.

XXI. That preſently after the ſigning and ſealing of theſe articles, by the baſha, dey, aga, and chiefs of Algiers, all injuries and damages ſuſtained on either part, ſhall be quite taken away and forgotten, and this peace ſhall be in full force and virtue, and continue for ever: and for all depredations and damages that ſhall be afterwards committed or done by either ſide, before notice can be given of this peace, full ſatisfaction ſhall immediately be made, *and whatſoever remains in kind ſhall be inſtantly reſtored.*

XXII. That in caſe it ſhall happen hereafter, that any thing is done or committed contrary to this treaty, whether by the ſubjects of the one or the other party, the treaty notwithſtanding ſhall ſubſiſt in full force, and ſuch contraventions ſhall not occaſion the breach of this peace, friendſhip, and good correſpondence, but the party injured ſhall amicably demand immediate ſatisfaction for the ſaid contraventions, before it be lawful to break the peace: and if the fault was committed by any private ſubjects of either party, they alone ſhall be puniſhed, as breakers of the peace and diſturbers of the public quiet. And our faith ſhall be our faith, and our word our word.

Confirmed and ſealed, in the preſence of Almighty God, April 10, of Jeſus 1682, of the Hejira 1093, Abrir 11.

This is the treaty which remains ſtill in force, and has been ever ſince referred to when any renewals, with additional

ditional articles, have been made by our ſucceeding ſovereigns. It was, *mutatis mutandis*, renewed and confirmed, April 5, 1686, by Sir William Soame, Bart. when he was going ambaſſador extraordinary from king James II. to the Grand Signior, with ſcarce any alterations, except literals, and what elſe has been obſerved.

In 1691, Thomas Barker, Eſq; ſent for by Shaaban Hojia, then dey of Algiers, renewed and confirmed the ſame, without alteration or addition.

In 1700 Capt. Munden, jointly with Robert Cole, Eſq; then Conſul for our nation at Algiers, renewed and confirmed the ſame, with the following additional articles.

I. We the moſt excellent and moſt illuſtrious lords, Muſtafa Dey, Ali Baſha, and Muſtafa Aga, governors of the moſt famous and warlike city and kingdom of Algiers, do, by theſe preſents, renew and confirm the peace we ſo happily enjoy, with William, King of Great Britain, France, and Ireland, defender of the Chriſtian faith, and his ſubjects, made in the year of Jeſus 1682, of the Hejira 1093, and renewed four years after, in every part and article, more particularly that of the eighth, wherein it is expreſſed, that no ſhip or veſſel belonging to our government of Algiers, ſhall cruiſe near, or in ſight of, any of the roads, havens, or ports, towns, or places belonging to the ſaid king of Great Britain, or any way diſturb the peace and commerce of the ſame: and in compliance with the ſaid eighth article of that treaty, we do ſincerely promiſe and declare, that ſuch orders ſhall for the future be given to all our commanders, that, under a ſevere penalty and our utmoſt diſpleaſure, they ſhall not enter into the channel of England, nor come, or cruize in ſight of any part of his Majeſty of Great Britain's dominions any more for the time to come.

II. That whereas it had been declared, that all ſhips and veſſels belonging to the ſubjects of the ſaid king of Great Britain ſhould have paſſes, &c. by the laſt day of September, in this preſent year of Jeſus 1700; we do by theſe declare, at the deſire of Capt. John Munden, commander in chief of his ſaid Majeſty's ſhips in the Mediterranean, and Robert Cole, Eſq; his Majeſty's conſul, now reſiding at our city of Algiers, on behalf of their great maſter, that no paſſes ſhall be required or expected from any of the Engliſh ſhips or veſſels, in any part of the world, but that they ſhall proceed on their voyage, without producing, or ſhewing a paſs to any of our cruizers, till the laſt of September 1701. And after that time is expired, and any ſhip of England be ſeized, not having a paſs, we do hereby declare, that the goods in that ſhip ſhall be priſe, but the maſter, men, and ſhip, ſhall be reſtored, and the freight immediately paid to the ſaid maſter, to the utmoſt value as he ſhould have had, if he had gone ſafe to the port whither he was bound.

III. That whereas Capt. John Munden has given us good aſſurance that he had a great affront ſome years paſt, from ſome of our rude ſailors at our Mole, we do hereby promiſe, that, at all times, whenever any of the king of Great Britain's ſhips of war ſhall come to this place, order ſhall be immediately given to an officer of the government, who ſhall attend at the Mole all the day time, during their ſtay here, to prevent any ſuch diſorders for the future, that no miſunderſtanding may happen between us: and in any ſuch caſe, the officer at the Mole ſhall ſecure the perſon or perſons ſo offending, who ſhall be puniſhed with the utmoſt ſeverity. By the help of God, and if he pleaſe, theſe articles, now made between us, ſhall be maintained. To the truth whereof, we have hereunto ſet our hands and ſeals, Algiers, in the year of the Hejira 1112, which is in the Chriſtian account Auguſt 20, 1700.

In 1703, admiral Byng, afterwards lord viſcount Torrington, renewing the peace for queen Anne with the ſame Muſtafa Dey, inſerted the two new articles, which are as follow: the preliminary one being only a confirmation of the foregoing, for which reaſon it is omitted.

I. That whereas by the ſaid articles of peace, made and concluded by admiral Herbert in 1682, it was agreed, that the ſubjects of England ſhould pay 10 *per cent.* cuſtom, for the goods they ſhould ſell at Algiers, or in the dominions thereof. Now, for the better ſettling and maintaining a good commerce between the ſubjects of England and thoſe of Algiers, it is agreed and declared, that, from henceforwards, the Engliſh ſhall pay but 5 *per cent.* cuſtom; and that contraband goods, as is declared before, ſhall not pay any cuſtom.

II. And it is farther agreed and declared, that all prizes taken by any one of the ſubjects of the ſaid queen of Great Britain, and all ſhips and veſſels built and fitted out in any of her Majeſty's plantations in America, that have not been in England, ſhall not be moleſted in caſe of their not having paſſes: but that a certificate in writing, under the hands of the commanding officers who ſhall take any prizes, and a certificate under the hand of the governors or chiefs of ſuch American colonies or places where ſuch ſhips were built or fitted out, ſhall be ſufficient paſſes for either of them. And our faith ſhall be our faith, and our word our word.

Algiers, confirmed and ſealed, in the preſence of Almighty God, October 28, in the year of Jeſus 1703, of the Hejira 1115.

This was again renewed in the reign of his late Majeſty king George I. when in 1716, admiral Baker had orders to viſit Tripoli, Tunis, and Algiers. With the two firſt, he confirmed our former treaties in perſon; but to Algiers, he deputed the Argyle and Cheſter, two of his Majeſty's ſhips, to whoſe commanders, Capt. Coningſby Norbury, and Capt. Nicholas Eaton, in conjunction with Mr. Thomas Thompſon, then acting as conſul in the abſence of his brother Samuel Thompſon, Eſq; he gave a full power to ratify and confirm all the above treaties, with theſe following new articles. After the preamble, the firſt article concludes thus:

I. If any demands or pretenſions ſhall be now left depending, between the ſubjects or others of either party, they ſhall be amicably redreſſed, and full ſatisfaction ſhall be made to each other, according to the truth and juſtice of their claim: nor ſhall any of the ſame be cancelled, or made void by this treaty.

II. That as the iſland of Minorca in the Mediterranean ſea, and the city of Gibraltar in Spain, have been yielded and annexed to the crown of Great Britain, as well by the king of Spain, as by the ſeveral powers of Europe engaged in the late war, it is now hereby agreed and fully concluded, that, from this time forwards for ever, the ſaid iſland of Minorca, and city of Gibraltar, ſhall be eſteemed, in every reſpect, by the government and people of Algiers to be part of his Britannic Majeſty's dominions, and the inhabitants thereof to be looked upon as his Majeſty's natural ſubjects, in the ſame manner as if they had been born in any other part of the Britiſh territories: and they with their ſhips and veſſels, wearing Britiſh colours, and being furniſhed with proper paſſes, ſhall be permitted freely to trade and traffic in any part of the dominions of Algiers, and ſhall paſs without any moleſtation whatſoever, and ſhall have the ſame liberties and privileges that are ſtipulated in this, and have been made in any other treaties in behalf of the Britiſh nation and ſubjects; and therefore none of the cruizers of Algiers ſhall, at any time, cruize within ſight of the ſaid iſland of Minorca and city of Gibraltar.

III. That if any Engliſh ſhip ſhall receive on board any paſſengers and goods belonging to the kingdom of Algiers, the Engliſh ſhall defend the ſaid Algerines and their goods ſo far as lies in their power, and not deliver them to their enemies. And the better to prevent any unjuſt demands being made upon the crown of Great Britain, and to avoid diſputes and differences that may ariſe, all goods and merchandiſe that ſhall from hence forwards be ſhipped by the ſubjects of Algiers, on board the ſhips or veſſels of Britiſh ſubjects upon freight, ſhall be firſt regiſtered in the office of cancelleria, before the Britiſh conſul reſiding in the port where they are ſo ſhipped, and the quantity, quality, and value thereof ſhall be expreſſed, and the conſul is to manifeſt the ſame in the clearance given to the ſhip or veſſel before it ſhall depart, to the end that if any cauſe of complaint ſhould happen hereafter, there may be no greater claim made on the Britiſh nation, than what by this method may be proved juſt and equitable.

IV. That

IV. That if any of the Algerine cruizers ſhall meet with ſhips provided with ſcallop paſſes, of either ſhips or ſatias, that ſhall fit with thoſe delivered to them by the Britiſh conſul, they ſhall paſs free and unmoleſted. Algiers, October 29, 1716.

Treaty of peace and commerce, between the moſt ſerene and mighty prince George *II. by the grace of God, of* Great Britain, France, *and* Ireland, *king, defender of the Chriſtian faith, Duke of* Brunſwick *and* Lunenburgh, *arch-treaſurer and Elector of the Holy Roman Empire,* &c. &c. &c. *and the moſt excellent and illuſtrious lords,* Mahamet Baſhaw Gramali, *dey, governor, and captain-general,* Seedy Ali Bey, Seedy Haſſan Kiaja, *the divan, and all the officers, ſoldiers, and people of the noble city and kingdom of* Tripoli *in* Barbary, *renewed, agreed on, and confirmed, by the honourable* Auguſtus Keppel, *commander in chief of his* Britannic *Majeſty's ſhips and veſſels in and about the* Mediterranean *ſeas, and* Robert White, *Eſq; his ſaid ſerene Majeſty's agent, and conſul-general to the dey and ſtate of* Tripoli, *furniſhed with his Majeſty's full powers for that purpoſe.*

I. In the firſt place it is agreed and concluded, That from this time forward, for ever, there ſhall be a true and inviolable peace, between the moſt ſerene king of Great Britain, and the moſt illuſtrious lords and governors of the city and kingdom of Tripoli in Barbary; and between all the dominions and ſubjects of either ſide; and if the ſhips and ſubjects of either party, ſhall happen to meet upon the ſeas, or elſewhere, they ſhall not moleſt each other, but ſhall ſhew all poſſible reſpect and friendſhip.

II. That all merchant ſhips belonging to the dominions of Great Britain, and trading to the city, or any part of the kingdom of Tripoli, ſhall pay no more than 3 *per cent.* cuſtom, for all kinds of goods they ſhall ſell; and for ſuch as they ſhall not ſell, they ſhall be permitted freely to emba k it again on board their ſhips, without paying any ſort of duty whatſoever, and ſhall depart without any hindrance or moleſtation.

III. That all ſhips and other veſſels, as well thoſe belonging to the ſaid king of Great Britain, or to any of his Majeſty's ſubjects, as thoſe belonging to the kingdom or people of Tripoli, ſhall paſs the ſeas, and traffic where they pleaſe, without any ſearch, hindrance, or moleſtation from each other: and that all perſons or paſſengers, of what country ſoever; and all monies, goods, merchandiſes, and moveables, to whatſoever people or nation belonging, being on board of any the ſaid ſhips or veſſels, ſhall be wholly free, and ſhall not be ſtopped, taken or plundered from either party.

IV. The Tripoli ſhips of war, or any other veſſels thereunto belonging, meeting with any merchant ſhips, or other veſſels of the king of Great Britain's ſubjects not being in any of the ſeas appertaining to any of his Majeſty's dominions, may ſend on board one ſingle boat, with two ſitters, beſides the ordinary crew of rowers; and no more but the two ſitters to enter any of the ſaid merchant ſhips, or any other veſſels, without the expreſs leave of the commander of every ſuch ſhip or veſſel; and then, upon producing unto them a paſs under the hand and ſeal of the lord high admiral of England, the ſaid boat ſhall preſently depart, and the merchant-ſhip or ſhips, veſſel or veſſels, ſhall proceed freely on her or their voyage: and although the commander or commanders of the ſaid merchant-ſhip or ſhips, veſſel or veſſels, produce no paſs from the lord high admiral of England, yet if the major part of the ſhips or veſſels company be ſubjects to the ſaid king of Great Britain, the ſaid boat ſhall preſently depart, and the merchant ſhip or ſhips, veſſel or veſſels, ſhall proceed freely on her or their voyage: and any of the ſaid ſhips of war, or other veſſels of his ſaid Majeſty, meeting with any ſhip or ſhips, veſſel or veſſels, belonging to Tripoli, if the commander of any ſuch ſhip or ſhips, veſſel or veſſels, ſhall produce a paſs, ſigned by the chief governors of Tripoli, and a certificate from the Engliſh conſul living there; or if they have no ſuch paſs or certificate, yet if the major part of their ſhips company or companies be Turks, Moors, or ſlaves belonging to Tripoli, then the ſaid Tripoli ſhip or ſhips, veſſel or veſſels, ſhall proceed freely.

V. That no commander, or other perſon, of any ſhip or veſſel of Tripoli, ſhall take out of any ſhip or veſſel of his ſaid Majeſty's ſubjects, any perſon or perſons whatſoever, to carry them any where to be examined, or upon any other pretence, nor ſhall uſe any torture or violence unto any perſon of what nation or quality ſoever, being on board any ſhip or veſſel of his Majeſty's ſubjects, upon any pretence whatſoever.

VI. That no ſhipwreck belonging to the ſaid king of Great-Britain, or to any of his Majeſty's ſubjects, upon any part of the coaſts belonging to Tripoli, ſhall be made or become prize; and that neither the goods thereof ſhall be ſeized, nor the men made ſlaves; but that all the ſubjects of Tripoli ſhall do their beſt endeavours to ſave the ſaid men and their goods.

VII. That no ſhip, or any other veſſel of Tripoli, ſhall have permiſſion to be delivered up, or to go to any other place in enmity with the ſaid King of Great Britain, to be made uſe of as corſairs at ſea againſt his ſaid Majeſty's ſubjects.

VIII. That if any ſhip or veſſel of Tunis, Algier, Tetuan, or Sally, or any other place, being in war with the ſaid king of Great Britain, bring any ſhips or veſſels, men or goods, belonging to his ſaid Majeſty's ſubjects, to Tripoli, or to any port or place in that kingdom, the governors there ſhall not permit them to be ſold within the territories of Tripoli, like as it is agreed at Algiers.

IX. That if any ſubject of the king of Great Britain happens to die in Tripoli, or its territories, his goods or money ſhall not be ſeized by the governors, or any miniſters of Tripoli, but ſhall all remain with the Engliſh conſul.

X. That neither the Engliſh conſul, nor any other ſubject of the ſaid king of Great Britain, ſhall be bound to pay the debts of any other of his Majeſty's ſubjects, unleſs they become ſurety for the ſame by a public act.

XI. That the ſubjects of his ſaid Majeſty in Tripoli, or its territories, in matter of controverſy, ſhall be liable to no other juriſdiction but that of the dey or divan, except they happen to be at difference between themſelves, in which caſe they ſhall be liable to no other determination but that of the conſul only.

XII. That in caſe any ſubject of his Majeſty, being in any part of the kingdom of Tripoli, happen to ſtrike, kill, or wound a Turk or Moor, if he be taken, he is to be puniſhed in the ſame manner, and with no greater ſeverity than a Turk ought to be, being guilty of the ſame offence; but if he eſcape, neither the ſaid Engliſh conſul, nor any other of his ſaid Majeſty's ſubjects, ſhall be in any ſort queſtioned or troubled upon that account, and no trial or ſentence to be paſſed without the conſul being preſent.

XIII. That the Engliſh conſul now, or at any time hereafter, living at Tripoli, ſhall be there at all times with entire freedom and ſafety of his perſon and eſtate, and ſhall be permitted to chuſe his own druggerman and broker, and freely to go on board any ſhip in the road, as often and when he pleaſes, and to have the liberty of the country; and that he ſhall be allowed a place to pray in; and that no man ſhall do him any injury, either in word or deed; and that he ſhall have liberty at all times of hoiſting his Majeſty's flag at the top of his houſe, and on his boat, when he paſſes on the water.

XIV. That not only during the continuance of this peace and friendſhip, but likewiſe if any breach or war happen to be hereafter, between the ſaid king of Great Britain, and the city and kingdom of Tripoli, the ſaid conſul, and all other his Majeſty's ſubjects, inhabiting in the kingdom of Tripoli, ſhall always, and at all times, both of peace and war, have full and abſolute liberty to depart and go to their own country, or any other, upon any ſhip or veſſel, of what nation ſoever they ſhall think fit, and to carry with them all their eſtates, goods, families, and ſervants, altho' born in the country, without any interruption or hindrance.

XV. That no ſubject of his ſaid Majeſty, being a paſſenger from or to any port, ſhall be any way moleſted or meddled with, either in perſon or property, altho' on board any ſhip or veſſel in enmity with Tripoli; and the ſame

ſame is to be regarded in favour of the ſubjects of Tripoli.

XVI. That when any of his Majeſty's ſhips of war ſhall appear before Tripoli, upon notice thereof given by the Engliſh conſul, or by the commander of the ſaid ſhips, to the chief governors of Tripoli, public proclamation ſhall be immediately made to ſecure the Chriſtian captives; and if after that, any Chriſtians whatſoever make their eſcape on board any of the ſaid ſhips of war, they ſhall not be required back again, nor ſhall the ſaid conſul or commander, or any other his Majeſty's ſubjects, be obliged to pay any thing for the ſaid Chriſtians.

XVII. That all merchant ſhips coming to the city or kingdom of Tripoli, tho' not belonging to Great Britain, ſhall have free liberty to put themſelves under the protection of the Britiſh conſul, in ſelling and diſpoſing of their goods and merchandiſe, if they ſhall think proper, without any hindrance or moleſtation.

XVIII. That at all times when any ſhip of war of the king of Great Britain, &c. carrying his ſaid Majeſty's flag, appears before the ſaid city of Tripoli, and comes to an anchor in the road, immediately after notice thereof given by his ſaid Majeſty's conſul, or officer from the ſhip, unto the dey and government of Tripoli, they ſhall, in honour to his Majeſty, cauſe a ſalute of 27 cannon to be fired from the caſtle and forts of the city, and that the ſaid ſhip ſhall return an anſwer by firing the ſame number of cannon.

XIX. That no ſubject of the king of Great Britain ſhall be permitted to turn Turk or Moor in the city and kingdom of Tripoli, being induced thereunto by any ſurpriſe whatſoever, unleſs he voluntarily appear before the dey or governor, with the Engliſh conſul's druggerman, three times in three days, and each day declare his reſolution to turn Turk or Moor.

XX. Whereas it is cuſtomary for the European conſuls to pay their reſpects to the baſhaw at the feaſts of Ramadam and Birham, it is hereby declared, That his Britannic Majeſty's conſul ſhall be admitted firſt to audience, and take the precedency of all other conſuls, in conſideration of the Engliſh being the oldeſt friends to the ſtate of Tripoli.

XXI. That whereas the iſland of Minorca in the Mediterranean ſea, and the city of Gibraltar in Spain, do now belong to his Majeſty the king of Great Britain; it is therefore hereby agreed, that from this time forward, for ever, the ſaid iſland of Minorca, and city of Gibraltar, ſhall be eſteemed in every reſpect, by the baſhaw and government of Tripoli, to be part of his Britannic Majeſty's own dominions, and the inhabitants thereof ſhall be looked upon as his Majeſty's natural ſubjects, in the ſame manner as if they had been born in any part of Great Britain; and they, with their ſhips and veſſels wearing Britiſh colours, and being furniſhed with Mediterranean paſſes, ſhall be permitted freely to trade and traffic in any part of the kingdom of Tripoli, or dominions thereunto belonging, and ſhall paſs without any moleſtation whatſoever, either on the ſeas or elſewhere, in the ſame manner, and with the ſame freedom and privileges, as have been ſtipulated in this and all former treaties, in behalf of the Britiſh nation and ſubjects; and that none of the ſhips or veſſels belonging to Tripoli, ſhall cruize or look for prizes, before, or in ſight of the ports of the iſland of Minorca, and the city of Gibraltar, to diſturb or moleſt the trade thereof in any manner whatſoever.

XXII. That if any of the ſhips of war of the ſaid king of Great Britain come to Tripoli, or to any other port or place of that kingdom, with any prize, they may freely ſell it, or otherwiſe diſpoſe of it, at their own pleaſure, without being moleſted by any; and that his Majeſty's ſaid ſhips of war ſhall not be obliged to pay cuſtoms in any ſort; and that if they ſhall want proviſions, victuals, or any other things, they may freely buy them at the rates in the market.

XXIII. That whenſoever it ſhall happen hereafter, that any thing is done or committed, by the ſhips or ſubjects of either ſide, contrary to any of theſe articles, ſatisfaction being demanded therefore, the ſame ſhall be made to the full, and without any manner of delay; and it ſhall not be lawful to break this peace, until ſuch ſatisfaction be denied; and whoſoever ſhall be the cauſe of breaking this peace, ſhall aſſuredly be puniſhed with preſent death.

XXIV. That his Britannic Majeſty's ſubjects, over and above the ſtipulations contained in this and all former treaties, ſhall enjoy all the privileges and advantages, which now are, or which hereafter may be granted to any of the ſubjects of the moſt favoured nation.

XXV. That in caſe any of his ſaid Majeſty's ſubjects ſhall import into the ſaid kingdom of Tripoli, or into any of the ports or dominions thereunto belonging, any warlike ſtores, as cannons, muſkets, piſtols, cannon powder, or fine powder, brimſtone, bullets, iron, planks, and all ſorts of timber fit for building of ſhips, pitch, tar, rozen, ropes, cables, maſts, blocks, anchors, ſails, and all other habiliments of war, as well by ſea as by land; as alſo proviſions, wheat, barley, beans, oats, or the like, they ſhall not pay any ſort of duty or cuſtom whatſoever.

XXVI. That new Mediterranean paſſes ſhall be iſſued out and given to his ſaid Majeſty's trading ſubjects, with all convenient ſpeed, and that the time for the continuance of the old paſſes, for the ſhips in the Indies and remote parts, ſhall be three years; and for all other ſhips and veſſels, one year; to commence from the delivery of the counter-tops of the new paſſes at Algiers; of which his Majeſty's conſul here, ſhall give the earlieſt notice to the baſhaw and government; and it is hereby expreſly agreed and declared, that the ſaid new paſſes ſhall, during the abovementioned ſpaces of time of three years and one year, be of full and ſufficient force and effect to protect all ſhips and veſſels of his ſaid Majeſty's ſubjects, who ſhall be provided with the ſame.

XXVII. That no merchant ſhip belonging to Great Britain, or any other nation under the protection of the Britiſh conſul, being in the port of Tripoli, ſhall be detained from proceeding to ſea on her voyage, longer than eight days, under the pretence of arming out the ſhips of war of the government, or any other whatſoever.

XXVIII. That if at any time the garriſons of Gibraltar or Port Mahon ſhould be in want of proviſions, and ſhould ſend for the ſame to Tripoli, or any part of the dominions thereof, they ſhall, if it is to be had, be ſupplied with it at the market-price.

XXIX. That all packets, bearing his Britannic Majeſty's commiſſion, which ſhall be met by any of the cruizers of Tripoli, ſhall be treated with the ſame reſpect as his Majeſty's ſhips of war, and all due reſpect ſhall be paid to his Majeſty's commiſſion; and both at meeting and parting, they ſhall be treated as friends; and if any of the Tripoli cruizers commit the leaſt fault or violence againſt them, the captains or raizes, ſo offending, ſhall, on their arrival at Tripoli, and proper complaint being made of them, be moſt ſeverely puniſhed, without admitting of their excuſes.

XXX. That all and every the articles in this treaty ſhall be inviolably kept and obſerved between his moſt ſacred Majeſty of Great Britain, and the moſt illuſtrious the baſhaw, lords and governors of the city and kingdom of Tripoli, and between the dominions and ſubjects of either ſide; and our faith ſhall be our faith, and our word our word. Dated in the preſence of Almighty God, in the city of Tripoli, this nineteenth day of September, one thouſand ſeven hundred and fifty one, according to the Chriſtian computation, and of the Turkiſh Hegeira, one thouſand one hundred and ſixty four, the twenty ninth day of the moon Shawan.

Treaty of peace and commerce between the moſt ſerene and mighty prince George *II. by the Grace of God, of* Great Britain, France, *and* Ireland, *king, defender of the Chriſtian faith, Duke of* Brunſwick *and* Lunenburgh, *arch-treaſurer and elector of the Holy Roman empire,* &c, &c, &c, &c. *and the moſt excellent and illuſtrious lord* Ali Paſcha, *begler bey and ſupreme commander of the ſtate of* Tunis, *renewed, agreed on, and confirmed, by the honourable* Auguſtus Keppel, *commander in chief of his* Britannic *Majeſty's ſhips and veſſels in and about the* Mediterranean *ſeas, and* Charles Gordon, *Eſq; his ſaid ſerene Majeſty's agent and conſul-general to the ſtate*

of Tunis, *furniſhed with his Majeſty's full powers for that purpoſe.*

I. That all former grievances and loſſes, and other pretences between both parties, ſhall be void and of no effect; and from henceforward there ſhall be a firm peace for ever, and free trade and commerce, between his Britannic Majeſty's ſubjects, and the people of the kingdom of Tunis, and dominions thereunto belonging: but this article ſhall not cancel or make void any juſt debt, either in commerce or otherwiſe, between the ſubjects on both ſides, but the ſame may be demanded and recovered as before.

II. That the ſhips of either party ſhall have a free liberty to enter into any port or river belonging to the dominions of the other, where they ſhall pay duty only for what they ſell, and, for the reſt, may freely export it again without moleſtation; and ſhall enjoy all other accuſtomed privileges: and the late exaction that hath been at the Goletta and the Marine, ſhall be reduced to the ancient cuſtoms in thoſe caſes.

III. That there ſhall not be any ſeizure made of any of the ſhips of either party, either at ſea or in port, but they ſhall paſs without any interruption, they diſplaying their colours; and to prevent any miſunderſtandings, the ſhips of Tunis ſhall be furniſhed with certificates, under the hand and ſeal of the Britiſh conſul, of their belonging to Tunis, which they are to produce on meeting with any Engliſh ſhip, on board of whom they ſhall have liberty of ſending two men only, peaceably to ſatisfy themſelves of their being Engliſh, who, as well as any paſſengers of other nations they may have on board, ſhall go free, both them and their goods.

IV. That if an Engliſh ſhip receive on board any goods or paſſengers belonging to the kingdom of Tunis, they ſhall be bound to defend them and their goods, ſo far as lyeth in their power, and not deliver them unto their enemies; and the better to prevent any unjuſt demands being made upon the crown of Great Britain, and to avoid diſputes and differences that might ariſe, all goods and merchandiſe that ſhall from henceforward be ſhipped by the ſubjects of Tunis, either in this port, or in any other whatſoever, on board the ſhips or veſſels belonging to Great Britain, ſhall be firſt entered in the office of Cancellaria, before the Britiſh conſul reſiding at the reſpective port, expreſſing the quantity, quality, and value of the goods ſo ſhipped, which the ſaid conſul is to manifeſt in the clearance given to the ſaid ſhip or veſſel before ſhe departs; to the end that if any cauſe of complaint ſhould happen hereafter, there may be no greater claim made on the Britiſh nation, than by this method ſhall be proved to be juſt and equitable.

V. That if any of the ſhips of either party ſhall, by accident of foul weather, or otherwiſe, be caſt away upon any of the coaſts belonging to the other, the perſons ſhall be free, and the goods ſaved and delivered to the proprietors thereof.

VI. That the Engliſh which do at preſent, or ſhall at any time hereafter, inhabit in the city or kingdom of Tunis, ſhall have free liberty, when they pleaſe, to tranſport themſelves with their families and children, although born in the country.

VII. That the people belonging to the dominions of either party, ſhall not be abuſed with ill language, or otherwiſe ill treated, but the parties ſo offending ſhall be puniſhed ſeverely according to their deſerts.

VIII. That the conſul or any other of the Engliſh nation reſiding in Tunis, ſhall not be obliged to make their addreſſes, in any difference, unto any court of juſtice, but to the baſhaw himſelf, from whom only they ſhall receive judgment, in caſe the difference ſhould happen between a ſubject of Great Britain and another of this government, or any other foreign nation; but if it ſhould be between two of his Britannick Majeſty's ſubjects, then it is to be decided by the Britiſh conſul only.

IX. That neither the Engliſh conſul, nor any other of his Majeſty's ſubjects, ſhall be liable to pay the debts of any other of the nation, unleſs particularly bound thereto under his own hand.

X. That whereas the iſland of Minorca in the Mediterranean ſea, and the city of Gibraltar in Spain, do now belong to his Majeſty the king of Great Britain; it is hereby agreed and fully concluded, That from this time forward, for ever, the ſaid iſland of Minorca ſhall be eſteemed, as likewiſe Gibraltar, by the government of Tunis, to be, in every reſpect, part of his Britannick Majeſty's dominions, and the inhabitants thereof ſhall be looked upon as his Majeſty's natural born ſubjects, in the ſame manner as if they had been born in any other part of Great Britain; and they, with their ſhips and veſſels wearing Britiſh colours, ſhall be permitted freely to trade and traffick in any part of the kingdom of Tunis, and ſhall paſs, without any moleſtation whatſoever, either on the ſeas or elſewhere, in the ſame manner, and with the ſame freedom and privileges, that have been ſtipulated in this and all former treaties, in behalf of the Britiſh nation and ſubjects.

XI. That the better and more firmly to maintain the good correſpondence and friendſhip that have been ſo long and happily eſtabliſhed between the crown of Great Britain and the government of Tunis, it is hereby agreed and concluded by the parties beforementioned, that none of the ſhips and veſſels belonging to Tunis, or the dominions thereof, ſhall be permitted to cruize or look for prizes, of any nature whatſoever, before, or in ſight of the aforeſaid city of Gibraltar, or any of the ports in the iſland of Minorca, to hinder or moleſt any veſſels bringing proviſions and refreſhments for his Britannick Majeſt's troops and garriſons in thoſe places, or to give any diſturbance to the trade and commerce thereof: and if any prize ſhall be taken by the ſhips or veſſels of Tunis, within the ſpace of ten miles of the aforeſaid places, ſhe ſhall be reſtored without any contradiction.

XII. That all the ſhips of war belonging to the dominions of either party, ſhall have freely liberty to uſe each other's ports, for waſhing, cleaning, and repairing any of their defects, and to buy and ſhip off any ſort of victuals, alive or dead, or any other neceſſaries, at the price the natives buy at in the market, without paying cuſtom to any officer. And whereas his Britannick Majeſty's ſhips of war do frequently aſſemble and harbour in the port of Mahon in the iſland of Minorca; if, at any time, they, or his Majeſty's troops in garriſon there, ſhould be in want of proviſions, and ſhould ſend from thence to purchaſe ſupplies in any part of the dominions belonging to Tunis, they ſhall be permitted to buy cattle alive or dead, and all other kinds of proviſions, at the prices they are ſold in the market, and ſhall be ſuffered to carry it off without paying duty to any officer, in the ſame manner as if his Majeſty's ſhips were themſelves in the port.

XIII. That in caſe any ſhips of war belonging to the dominions of Tunis, ſhall take, in any of their enemies ſhips, any Engliſhmen ſerving for wages, they are to be made ſlaves; but if merchants or paſſengers, they are to enjoy their liberty and goods free.

XIV. That if any ſlave of Tunis ſhould make his eſcape from thence, and get on board an Engliſh man of war, the ſaid ſlave ſhall be free, and neither the Engliſh conſul, nor any of his nation, ſhall in any manner be queſtioned about the ſame.

XV. That the better to prevent any diſputes that may hereafter ariſe between the two parties about ſalutes and publick ceremonies, it is hereby agreed and concluded, that whenever any flag officer of Great Britain, ſhall arrive in the bay of Tunis, in any of his Majeſty's ſhips of war, there ſhall be ſhot off from the caſtles of the Goletta, or other the neareſt fortifications belonging to Tunis, a number of guns according to cuſtom, as a royal ſalute to his Britiſh Majeſty's colours, and the ſame number ſhall be returned in anſwer thereto by his Majeſty's ſhips; and it is hereby ſtipulated and agreed, that all ceremonies of honour ſhall be allowed to the Britiſh co[illegible] who reſides here, to repreſent equal in every reſpect his Majeſty's perſon, as to any other nation whatſoever, and no other conſul in the kingdom to be admitted before him in precedency.

XVI. That the ſubjects of his moſt ſacred Majeſty of Great Britain, &c. either reſiding in, or trading to the dominions of Tunis, ſhall not, for the time to come, pay any more than 3 *per cent.* cuſtom, on the value of the goods or merchand[illegible] which they ſhall either bring into or carry out of the [illegible]ingdom of Tunis.

XVII. It

XVII. It is moreover agreed concluded, and eſtabliſhed, that at whatſoever time it ſhall pleaſe the government of Tunis, to reduce the cuſtoms of the French nation to leſs than they pay at preſent, it ſhall always be obſerved, that the Britiſh cuſtoms ſhall be 2 *per cent.* leſs than any agreement that ſhall for the future be made with the ſaid French, or that ſhall be paid by the ſubjects of France.

XVIII. It is moreover agreed, concluded, and eſtabliſhed, that in caſe any Britiſh ſhip or ſhips, or any of the ſubjects of his Majeſty of Great Britain, ſhall import at the port of Tunis, or any port of this kingdom, any warlike ſtores, as cannons, muſkets, piſtols, cannon-powder, or fine powder, bullets, maſts, anchors, cables, pitch, tar, or the like; as alſo proviſions, viz. wheat, barley, beans, oats, oil, or the like, for the ſaid kind of merchandiſe they ſhall not pay any ſort of duty or cuſtom whatever.

XIX. That in caſe a war ſhould happen between his Britannick Majeſty and any other ſtate or nation whatever, the ſhips of Tunis ſhall not in any ſort afford aſſiſtance to the enemies of his Majeſty or his ſubjects.

XX. That if an Engliſhman kills a Turk, he ſhall be judged before the Caddi of the place, according to juſtice: if he is found guilty of the crime, he ſhall be puniſhed with death; but if he eſcape, the conſul ſhall not be moleſted, or called upon for that account; and the conſul ſhall always have timely notice, that he may have an opportunity of being preſent at the trial.

XXI. That if at any time a war or rupture happen between the two contracting powers, the Engliſh conſul and his nation may freely depart with all their goods and effects: and this article is to be reciprocal for the ſubjects of Tunis.

XXII. That whereas Gibraltar and the iſland of Minorca do belong to his Britannick Majeſty, if at any time any of the cruizers of Tunis ſhould meet with any veſſels of the ſaid places, under Engliſh colours, furniſhed with proper paſſports, they ſhall be treated in all reſpects like other Engliſh ſhips, provided that there be no more than one third part of the ſhip's company who are not ſubjects of his ſaid Majeſty, for in ſuch caſe they, the ſaid ſtrangers, ſhall be deemed as priſoners: but it is allowed to embark as many merchants or paſſengers as they ſee good, be they of what nation ſoever: and if at any time a Tunis man of war ſhall take a ſhip from their enemies, on board of which may happen to be any Engliſh ſubjects, they ſhall be immediately releaſed, with all their goods and merchandiſe, provided always, that they be provided with proper paſſports: and this article is to be obſerved reciprocally on the parts of the Engliſh.

XXIII. That if any Britiſh ſhips or veſſels meet with any of the ſhips or veſſels belonging to the ſtate of Tunis, and there ſhould be any injury or offence given by either ſide, juſtice being properly demanded, ſhall be immediately done, and the aggreſſor ſhall be ſeverely puniſhed, without it occaſioning any breach or war.

XXIV. That his Britannick Majeſty's ſubjects ſhall be always treated, by the ſtate of Tunis, with the higheſt degree of reſpect, love, and honour; becauſe the Engliſh, of all other powers, are their firſt and beſt friends.

XXV. That new Mediterranean paſſes ſhall be iſſued out and given to his ſaid Majeſty's trading ſubjects, with all convenient ſpeed, and that the time for the continuance of the old paſſes, for the ſhips in the Indies and remote parts, ſhall be three years; and for all other ſhips and veſſels, one year; to commence from the delivery of the counter-tops of the new paſſes at Algiers; of which his Majeſty's conſul here ſhall give the earlieſt notice to this ſtate; and it is hereby expreſly agreed and declared, that the ſaid new paſſes ſhall, during the abovementioned ſpaces of time of three years and one year, be of full and ſufficient force and effect to protect all ſhips and veſſels of his ſaid Majeſty's ſubjects, who ſhall be provided with the ſame.

XXVI. That all packets bearing his Britannic Majeſty's commiſſion, which ſhall be met by any cruizers of Tunis, ſhall be treated with the ſame reſpect as his Majeſty's ſhips of war; and all due reſpect ſhall be paid to his Majeſty's commiſſion, and both at meeting and parting they ſhall be treated as friends; and if any of the cruizers of Tunis commit the leaſt fault or violence againſt them, the captains or raizes ſo offending, ſhall, on their arrival at Tunis, and proper complaint being made of them, be moſt ſeverely puniſhed, without admitting of their excuſes.

All the preceding articles of this treaty, having been approved of and agreed to, are hereby ratified, renewed, and confirmed, between his moſt ſacred Majeſty the king of Great Britain, &c. and the moſt illuſtrious lord Ali Paſha, begler bey and ſupreme commander of the ſtate of Tunis, which let no one preſume to infringe or violate. Dated in the preſence of Almighty God, at the palace of Bardo near Tunis, this nineteenth day of October, one thouſand ſeven hundred and fifty one, according to the Chriſtian computation; and of the Turkiſh Hegeira, one thouſand one hundred and ſixty-four, the tenth day of the moon Zil Hadgi Sheriffay.

Additional article to the ancient treaties ſubſiſting between his Britannic *Majeſty and the dey and government of* Algiers, *agreed to by the dey* Mahomet, *and his ſaid Majeſty's plenipotentiaries the honourable* Auguſtus Keppel, *and* Ambroſe Stanyford, *Eſq; his Majeſty's agent and conſul-general at* Algier.

That all packets or expreſs-boats, bearing his Britannic Majeſty's commiſſion, which ſhall be met by any of the cruizers of Algiers, ſhall be treated with the ſame reſpect as his Majeſty's ſhips of war, and all due reſpect ſhall be paid to his Majeſty's commiſſion; and both at meeting and parting, they ſhall be treated as friends: and if any of the Algerine cruizers commit the leaſt fault or violence againſt them, the captains or raizes ſo offending, ſhall, on their arrival at Algiers, and proper complaint being made of them, be moſt ſeverely puniſhed, without admitting of their excuſes. Dated at Algiers the third day of June 1751, and in the year of Hegeira 1164, the twentieth day of the moon Regil.

TREE. The firſt and largeſt of the vegetable kind, conſiſting of a trunk, out of which ſpring forth branches and leaves.

Standards or trees, in full air, are ſuch as naturally riſe a great height, and are not topped. For the choice of trees of this kind to be tranſplanted out of a nurſery, Quintiney recommends us to ſuch as are ſtraight, ſix feet high at leaſt, five or ſix inches thick at bottom, and three or four at top; the bark pretty ſmooth and ſhining, as a token of their youth, and of the good ſoil they grew in. See *Tranſplantation.*

Dwarf-TREES, are ſuch as are kept low, and never ſuffered to have above ſix inches of ſtem. Theſe are uſed to be kept vacant or hollow in the middle; that the branches, ſpreading round about the ſides, may form a kind of round bowl or buſh.

Wall-TREES, are thoſe whoſe branches are ſtretched out, and nailed againſt walls. For dwarf and wall-trees, ſuch are to be choſen for tranſplantation, out of the nurſery, as are ſtraight, and conſiſt of a ſingle ſtem, with a ſingle graft; rather than two or three grafts in ſeveral branches; their thickneſs alſo at bottom ſhould be two or three inches.

Fruit-TREES, are ſuch as bear fruit.

Timber-TREES, are thoſe whoſe trunks are large, tall, and ſtraight, whereof beams and maſts are uſed to be made. See *Timber.*

Coniferous-TREES, are thoſe whoſe fruit is of a conical figure, as the pine, fir, larch, and others; which are all called reſiniferous; becauſe coniferous trees are generally covered with a bark that abounds in reſin.

In the Indies there are very large foreſts conſiſting only of a ſingle tree, whoſe branches, falling to the ground, take root, and put forth new trees; of which kind are the fig-tree and paretuvier.

Diana's-TREE, among the chemiſts, is a kind of metalline vegetation; which, after a long proceſs, ſhoots out into branches, with the appearance of leaves, and even flowers.

TREES, in ſhip-building, are timbers uſed in various parts of the ſhip, and for various uſes; as the cheſs-trees, croſs-trees, treſſel-trees, and the like.

TREILBOURG. A port-town of Sweden, in the province of Schonen, ſituated in 13 deg. 30 min. of E. lon. and 55 deg. 30 min. of N. lat. on the Baltic ſea, 30 miles S. E. of Copenhagen.

TRENT. One of the largeſt rivers in England, which riſes in the moor-lands of Staffordſhire; and, running S. W. by Newcaſtle-under-line, divides that county into two equal parts; then, entering Derbyſhire, turns about to the N. E. paſſing by Burton, and afterwards Nottingham and Newark, having run the whole length of Nottinghamſhire; after which it continues its courſe almoſt due N. to Gainſborough, on the confines of Lincolnſhire, and having joined the Ouſe, and ſeveral other rivers, changes its name for that of Humber, falling into the German ſea below Hull.

TRESEN, or *Troſa*. A port-town of Sweden, ſituated in 17 deg. of E. lon. and 59 of N. lat. on the Baltic ſea, 32 miles S. of Stockholm.

TRET, in commerce, an allowance made for the waſte, or the duſt, that may be mixed with any commodity; which is always four pounds in 104 pounds weight. See *Tare*.

TRIA *prima*, among chemiſts, the three hypoſtatical principles, ſalt, ſulphur, and mercury; of which they hold all bodies to be primarily made, and into which they are held reſolvable by fire.

TRIBUTE. A tax, or impoſt, which one prince or ſtate is obliged to pay to another, as a token of dependance, or in virtue of a treaty, and as a purchaſe of peace. The Romans made all the nations they ſubdued pay them tribute; and Mahomet laid it down as a fundamental of his law, that all the world ſhould pay him tribute.

In the ſtates of the Grand Signior, Chriſtian children are taken in way of tribute, to make agemogláns, janizaries, and the like.

TRIBUTE, is ſometimes alſo uſed for a perſonal contribution, which princes levy on their ſubjects by way of capitation or poll-money. See *Tax*.

In this it differs from an impoſt, which is properly what is laid on merchandiſes. See *Impoſt*.

TRIERS, or *Treves*. A city of Germany, in the circle of the lower Rhine, capital of the electorate of Triers, ſituated in 6 deg. 10 min. of E. lon. and 49 deg. 55 min. of N. lat. on the river Moſelle, 60 miles S. of Cologn, and as many W. of Mentz.

TRIERS *Electorate*, is a province of Germany, in the circle of the lower Rhine, bounded by the electorate of Cologn, and the duke of Juliers on the N. by Mentz and Weteravia on the E. by Lorrain and the palatinate on the S. and by the Netherlands on the W. being 80 miles long, and from 20 to 50 broad. See *Germany*.

TRIESTE. A port-town of Iſtria, ſituated in 14 deg. of E. lon. and 46 deg. 5 min. of N. lat. on the gulph of Venice, ſubject to the houſe of Auſtria.

TRIFOLIUM, denotes any three-leafed graſs. That moſt uſed in medicine is the triſolium paluſtre, or buck-bean; which is very detergent, and uſed with ſucceſs in ſcorbutic, rheumatic, and ſcophulous habits: the ordinary way of uſing it, being by making a pretty ſtrong infuſion of the dried herb, in form of tea.

TRIM *of a ſhip*, is her beſt poſture, proportion of her ballaſt, and hang of her maſts for ſailing: hence, to find the beſt way of making a ſhip ſail ſwiftly, is to find her trim.

To TRIM *a boat*, is to ſet the paſſengers ſo as to keep the boat even on both ſides.

TRINIDAD, or *Trinity Iſland*, is ſituated in the Atlantic, or American ocean, between 60 and 62 deg. of W. lon. and between 9 and 11 deg. of N. lat. ſeparated from the province of New Andaluſia in Terra Firma, by a narrow ſtreight called Boca de Drago about three miles over. It is 80 miles N. W. of the river Oronoco, being about 90 miles long, and 60 broad, ſubject to Spain; producing ſugar, cotton, Indian corn, fruits, and the beſt tobacco.

TRINITY-*houſe*, is a kind of college at Deptford, belonging to a corporation of ſea-faring perſons, who have power, by the king's charter, to take care of ſuch as deſtroy ſea-marks, to correct the faults of ſailors, and to take care of ſeveral other things belonging to navigation and the ſeas, and the examination of young officers.

Tho' the origin of this ſociety is unknown; yet that it is of conſiderable antiquity, is very manifeſt, by the firſt charter of incorporation granted them by Henry VIII. dated the 20th of May 1515, wherein were confirmed to them not only the rights and privileges of the ſhipmen and mariners of England, their predeceſſors; but alſo their ſeveral poſſeſſions at Deptford, which, together with divers grants of Q. Elizabeth and Charles II. were confirmed by letters-patent of the 1ſt of James II. dated the 8th of July 1685, by the name of the maſter, wardens, and aſſiſtants of the guild or fraternity of the moſt glorious and undivided Trinity, and of St. Clement of the pariſh of Deptford Strond in the county of Kent. This corporation is governed by a maſter, four wardens, eight aſſiſtants, and 18 elder brethren: the inferior members of the fraternity, denominated younger brethren, are of an unlimited number, for every maſter and mate expert in navigation, may be admitted as ſuch, and ſerve as a continual nurſery, to ſupport the vacancies among the elder brethren, when removed by death or otherwiſe.

The maſters, wardens, aſſiſtants, and elder brethren of this fraternity, are by charter inveſted with the following powers: firſt, the examining of the mathematical children of Chriſt's hoſpital. 2. The examination of the maſters of his Majeſty's ſhips; the appointing pilots to conduct ſhips in and out of the river Thames; and the amercing all ſuch as ſhall preſume to act as maſter of a ſhip of war, or as a pilot, without their approbation, in a pecuniary mulct of 20 l. 3. The ſettling the rate of pilotage, and erecting light-houſes and other ſea marks, upon the ſeveral coaſts of the kingdom, for the ſecurity of navigation. 4. The preventing of aliens from ſerving on board Engliſh ſhips, without their licence, upon penalty of 5 l for each offence. 5. The puniſhing of ſeamen, for deſertion or mutiny in the merchants ſervice. 6. The hearing and determining the complaints of the officers and ſeamen in the merchants ſervice; but ſubject to an appeal, to the lord high admiral for the time being, or the judge of the court of admiralty, if in commiſſion. 7. The granting of licences to poor ſeamen, non-freemen, to row upon the river Thames for their ſupport, in the intervals of ſea ſervice.

To this company belongs the ballaſt-office, for clearing and deepening the river Thames, by taking from thence a ſufficient quantity of ballaſt, for the ſupply of all ſhips that ſail out of the ſaid river; in which ſervice 60 barges of the burden of 30 tons, and two men each, are continually employed: and in conſideration of the great increaſe of the poor of this fraternity, they are, by their charter, impowered to purchaſe lands in mortmain, to the amount of 500 l. *per annum*, and alſo to receive charitable benefactions of well-diſpoſed perſons, to the like amount of 500 l. *per annum* clear of reprizes.

The charitable benefactions belonging to this corporation are ſo very numerous, that to avoid prolixity, it will be ſufficient to acquaint the reader, that by the profits ariſing therefrom, together with thoſe of the ballaſt-offices, light-houſes, buoys, beacons, and the like, the company annually relieve about 3000 poor ſeamen, their widows, and poor orphans, at the expence of about 6000 l.

TRIP. A ſea term. A ſhip is ſaid to bear her top-ſails a-trip, when ſhe carries them hoiſted up to the higheſt.

TRIPOLI. A kingdom or ſtate in Barbary. See *Barbary*.

TRIPOLI *city*, is the capital of the ſtate of Tripoli, ſituated in 14 deg. 30 min. of E. lon. and 33 deg. 30 min. of N. lat.

TRIPOLI, is alſo a port-town of Syria, ſubject to Turky, in 36 deg. 15 min. of E. lon. and 34 deg. 30 min. of N. lat. on the Levant ſea, 100 miles S. of Scandaroon, the chief port of that part of Syria anciently called Phœnicia.

TRIPOLI, or *Tripoly*. A kind of dry ſoft ſtone, or chalk, of a citron colour, uſed in poliſhing the lapidaries, goldſmiths, copper-ſmiths, and glaſs-grinders works.

Some imagine tripoli to be a common ſtone, burnt and calcined by the ſulphurous exhalations which happen to be under

under the mines where it is found: of these mines there are numbers in various parts of Europe, particularly in Italy, where the tripoli is very good. Others, with more probability, take it for a native earth.

TRINQUIMALE. A port-town of the island of Ceylon, in the East Indies, situated in 80 deg. of E. lon. and 9 deg. of N. lat. on the N. E. side of the island, 100 miles N. E. of Candy.

TRIQUIER, or *Trequier*. A port-town of France, in the province of Britanny, situated in 3 deg. 16 min. of E. lon. and 48 deg. 50 min. of N. lat. on the English channel, 50 miles W. of St. Malo.

TRITURATION, in pharmacy, is grinding, or the reducing a solid body into a subtile powder, called also levigation, and pulverisation.

The trituration of woods, barks, minerals, and other dry bodies, is performed in metalline mortars; but of most bodies, in marble, or stone mortars, with pestles of wood, glass, and ivory.

TROCHE, in pharmacy, a form of medicine, made to be held in the mouth to dissolve gradually; being properly a dry composition; the chief ingredients whereof, after having been wrought into a very fine powder, are incorporated with some proper liquor, as distilled waters, wine, vinegar, or mucilages; and reduced into a mass, which is moulded in little cakes, or balls of any form, at pleasure, and dried in the air, far from the fire. The chief troches are those of agaric, liquorice, nutmeg, amber, rhubarb, capers, myrrh, roses, camphor, squillæ, and vipers. Those of coloquintida are called troches of alhandal, from the Arabs, who call coloquintida handal.

TROCHOLICKS. That part of mechanics, which treats of and demonstrates all manner of wheel work, or circular motion.

TRONAGE. An ancient custom, or toll, paid for the weighing of wool.

TRONATOR. An officer of the city of London, whose business it was to weigh the wool brought into the city.

TRONE *weight*, was the same with what is now called troy weight.

TROPES. A port-town of France, in the province of Provence, situated in 6 deg. 30 min. of E. lon. and 43 deg. 15 min. of N. lat. on the Mediterranean, 30 miles E. of Toulon.

TROPICS, in astromony, two moveable circles of the sphere, drawn through the solstitial points, parallel to the equator. The tropics may be defined the two circles parallel to the equator, at such distance therefrom, as is equal to the greatest recess of the sun from the equator towards the poles; or to the sun's greatest declination; or the obliquity of the ecliptic.

Of the two tropics, that drawn through the beginning of Cancer, is called the tropic of Cancer; and that thro' the beginning of Capricorn, the tropic of Capricorn.

TROPICS, in geography, are two lesser circles of the globe drawn parallel to the equator, thro' the beginnings of Cancer and Capricorn: these tropics being in the planes of the cœlestial tropics at the distance of 23 deg. 29 min. from the equator, which is the sun's greatest declination.

TROUBAHOUACHE, called also *Moncha*. A measure used by the inhabitants of Madagascar for clean rice, containing about 6 lb. but for rice with the husk on there is another measure, called *Zatou*. See *Zatou*.

TROUGH *of the sea*, is the hollow or cavity made between two waves, or billows, in a rolling sea; hence when a ship lies down there, they say she lies in the trough of the sea.

TROUT. A fresh-water fish, variegated with several yellow and red spots, and of several sorts; but most commonly reduced to two, namely the yellow and white, or salmon trout.

The salmon trouts of Ireland and Scotland make a considerable article in their trade; being pickled after the manner of salmon, and sent to other countries.

TROY-*weight*, anciently called trone-weight. See *Weight*.

TRUCE. A suspension of arms, or a cessation of hostilities, between two persons at war.

Truces are frequently concluded between princes, in order to come to a peace; and truces of many years serve instead of treaties of peace between princes, whose differences cannot be finally adjusted. See *Treaty*.

TRUCHMAN, *Dragoman*, *Druggerman*, or *Drogman*, in the countries of the Levant, an interpreter.

TRUCK, in a ship, a square piece of wood at the top of a mast, to put the flag-staff in.

TRUCKING, in commerce, the same as bartering or exchanging. See *Exchange*.

TRUCKS, among gunners, are round pieces of wood in form of wheels, fixed on the axle-trees of carriages, to move the ordnance at sea, and sometimes also at land.

TRUFFLES, in natural history, a kind of subterraneous vegetable production, not unlike mushrooms.

TRUG, or *Trug-corn*, in the ancient English customs, denotes a measure of wheat.

TRUMPET. A musical instrument, the most noble of all portable ones of the wind kind, used chiefly in war, among the cavalry, to direct them in the service; being usually made of brass; sometimes of silver, iron, tin, and wood.

Speaking TRUMPET, is a tube from six to fifteen feet long, made of tin, perfectly strait, and with a very large aperture; the mouth-piece being big enough to receive both lips. The mouth being applied hereto, it carries the voice to a very great distance, so as it may be heard distinctly a mile; whence its use at sea. The invention of this trumpet is held to be modern, and commonly ascribed to Sir Samuel Morland, who called it the *tuba stentorophonica*: but Ath. Kircher seems to have a better title to the invention; for it is certain he had such an instrument before ever Sir Samuel Morland thought of his. Besides, if we consider how famed the tube of Alexander the Great was, wherewith he used to speak to his army, and which might be heard distinctly 100 stadia or furlongs, it is somewhat strange the moderns should pretend to the invention; the stentorophonic horn of Alexander, whereof there is a figure preserved in the Vatican, being almost the same with that now in use.

TRUNDLE, is a kind of carriage with low wheels, to draw heavy burdens.

TRUNDLE-*shot*, is an iron-shot about 17 inches long, sharp-pointed at both ends, with a round bowl of lead cast upon it, about a hand-breadth from each end.

TRUNNIONS, or *Trunions of a piece of ordnance*, those knobs or bunches of the gun's metal, which bear her up on the cheeks of the carriage.

TRUSS. A bundle or certain quantity of hay or straw. A truss of hay is to contain fifty-six pounds, or half an hundred weight; and thirty-six trusses make a load. In June and August the truss is to weigh 60 pounds, on forfeiture of 18 s. *per* truss.

TRUSSES, in a ship, are ropes made fast to the parrels of a yard; either to bind the yard to a mast, when the ship rolls, or to hale down the yard in a storm.

TRUSTEE. One who has an estate, or money put, and trusted in his hands for another.

TRUXILLO. A port-town of Mexico, in America, in the province of Terra Firma, and territory of Venezuela, situated in 88 deg. 30 min. of W. lon. and 15 deg. 30 min. of N. lat. on the gulph of Honduras, 300 miles N. E. of Amapalla.

To TRY, in the sea-language. A ship is said to try, or lie a try, when she has no sails abroad but her main-sail or mizen-sail.

TRYPHERA, in pharmacy, a denomination given to several medicines, especially of the opiate kind. The great tryphera is composed of opium, cinnamon, cloves, and many other ingredients; it is used to fortify the stomach, to stop fluxes, and for some diseases of the womb. The Saracenic tryphera, and Persian tryphera, thus called because first introduced, the one by the Saracens, and the other by the Persians, are both of them gentle purgatives.

TUB, is used as a kind of measure, to denote the quantity of various commodities: thus a tub of tea is a quantity of about 60 pounds; and a tub of camphire is a quantity from 56 to 80 pounds.

TUILERIE, or *Tylery*. A tyle-work, or a large building with a drying-place, covered a-top; but furnished with

apertures on all ſides; through which the wind, having admittance, dries the tyles and bricks in the ſhade, which the ſun would otherwiſe crack, before they are put in the kiln. See *Tyle*.

TUN, or *Ton*, originally ſignifies a large veſſel or caſk, of an oblong form, biggeſt in the middle, and diminiſhing towards its two ends; girt about with hoops, and uſed to put up ſeveral kinds of merchandiſes in, for their better carriage; as brandy, oil, ſugar, ſkins, hats, and the like. The term is alſo uſed for certain veſſels of extraordinary bigneſs, ſerving to keep wine, cyder, and beer in for ſeveral years.

TUN, or *Ton*, is alſo a certain meaſure for liquids.

The Engliſh tun contains two pipes, or 4 hogſheads, or 252 gallons. The tun of Amſterdam contains 6 aems, or awms; the aem 4 ankers, the anker 2 ſtekans, the ſtekan 16 mingles; 12 ſtekans being equal to an Engliſh barrel, or 62 gallons. The tun of Bourdeaux and Bayonne contains 4 barrels, which are equal to three Paris muids: but, at Orleans and Berry, it is about two Paris muids.

TUN, is alſo a certain weight, whereby the burdens of ſhips are eſtimated. See *Weight*.

The ſea-tun is computed to weigh 2000 pounds, or 20 quintals or hundreds weight, amounting to 2440 pounds avoirdupois; ſo that when we ſay a veſſel carries 200 tons, we mean it is able to carry 200 times the weight of 2000 pounds; that is, 400,000 pounds: it being found by a curious obſervation, that the ſea-water, whoſe room the veſſel fills when full laden, weighs ſo much.

To find the burden and capacity of a ſhip, they meaſure the hold or place where ſhe is loaden; allowing 42 cubic feet to the ſea-tun.

The price of freight, or carriage, of merchandiſe, is ordinarily ſettled on the foot of the ſea-tun: and yet, tho' the tun is 2000 pounds weight, there is ſome difference made therein, either on account of the weight, the bulk of the commodities, the ſpace they take up, or the like. See *Freight*.

Accordingly, at Bourdeaux, four barrels of wine are held a tun, 5 barrels of brandy are eſtimated 2 tuns, 3 of ſyrup are one tun, 4 barrels of prunes are one tun, two dozen of walnut-tree tables one tun, a dozen of planks one tun, 20 buſhels of cheſnuts are accounted one tun, and the like of wheat or other grain; ten bales of cloth, five bales of feathers, and eight of paper, make each one tun.

A tun or load of timber is 40 ſolid feet, if the timber is round; but if hewed, or ſquare, fifty.

TUN *of gold*. See *Tun of* GOLD.

TUNIS. A kingdom of Africa. See *Barbary*.

TUNIS. Capital of the kingdom of Tunis, lying in 10 deg. of E. lon. and 36 deg. 20 min. of N. lat. in a fine plain, near a ſpacious lake, 30 miles S. of Carthage ruins, and 300 miles E. of Algiers.

TUNNAGE, or *Tonnage*. A duty or cuſtom due for merchandiſe brought or carried in tuns, and ſuch like veſſels, from or to other nations; thus called becauſe rated at ſo much *per* ton. See *Cuſtom*.

TUNNAGE, is properly a duty impoſed on liquids according to their meaſures; as poundage is that impoſed on other commodities according to their weight. See *Poundage*.

They were both firſt ſettled by authority of parliament under Edward III. were re-eſtabliſhed in 1660, under the reign of Charles II. for his life, upon abrogating all the laws made under Oliver Cromwel, and re-ordaining the execution of the ancient laws and regulations; and have been continued and renewed by the parliament ever ſince. By an act, made in the firſt year of the reign of Queen Anne, they were continued for 96 years, expiring in the year 1798. This duty at firſt was 4 l. 10 s. ſterling *per* tun, for French wines brought into the port of London by the Engliſh; and only 3 l. for that brought into the other ports. For the ſame wine imported by ſtrangers to London, this duty was 6 l, and that brought into other ports 4 l. 10 s. ſterling. Rheniſh wine, in virtue of the ſaid act paid 7 l. 10 s. ſterling; and Spaniſh, Portugueſe, Malmſey, and Greek wines, the ſame as French wines; but there have been many additional duties impoſed ſince; as, the additional duty of the old ſubſidy; ſeignorage; duty of ancient impoſt of tonnage; orphans money; and new ſubſidy. See *Duty*.

TUNNAGE, is alſo uſed for a certain duty paid the mariners by the merchants for unloading their ſhips, arrived in any haven, after the rate of ſo much *per* tun.

TUNNY. A large ſea-fiſh, whoſe ſkin is covered with large ſcales; with a pointed head, and ſharp teeth.

This fiſh is found abundantly in ſeveral parts of the ocean, and Mediterranean; but eſpecially upon the coaſts of Provence in France, where it makes a conſiderable article both for exterior and interior commerce.

As the tunny is a fiſh of paſſage, the inhabitants of Provence fiſh for them in the months of September and October; which is the time when, paſſing the ſtraits in great ſhoals, they enter the Mediterranean. As ſoon as one tunny has got into the nets, the fiſhermen promiſe themſelves ſucceſs; becauſe they always ſwim in company, and enter the nets till they are full; which are then either dragged aſhore, or into their boats, where the fiſh die immediately, and are afterwards gutted and cut into ſlices, then roaſted upon large gridirons, and fried in oil of olives. After this they are ſeaſoned with ſalt, pepper, cloves, and ſome laurel leaves; then packed up in ſmall barrels, with new oil of olives, and a little vinegar.

The tunny is a very common food; having the taſte and colour of veal; but it ſhould be choſen new, firm, and well prepared with good oil.

TURBAN, or *Turbant*. The head-dreſs of moſt of the eaſtern and mahometan nations; conſiſting of two parts, a cap, and a ſhaſh of fine linen, or taffety, artfully wound in divers plaits about it. The cap is red or green, without any brim, and pretty flat; though roundiſh a-top, and quilted with cotton, but does not cover the ears; about which is wrapped a long piece of linen or cotton, in ſeveral wreaths variouſly diſpoſed. There is a good deal of art in giving turbans the fine air; and the making them up conſtitutes a particular trade, as the making of hats does among Europeans. The ſhaſh of the Turkiſh turban is white linnen, and that of the Perſians is red woollen; which are the diſtinguiſhing marks of their different religions.

TURBITH, or *Turpeth*. A medicinal root, brought from the Eaſt Indies, particularly Cambaya, Surat, and Goa; tho' others will have it that the true turbith comes chiefly from Ceylon. The turbith of the moderns bears ſo little reſemblance to that of the ancients, that it is difficult to ſuppoſe them the ſame. That ſold by druggiſts is a longiſh root about the thickneſs of the finger, reſinous, heavy, and of a browniſh hue without, but whitiſh within; being brought to Europe cloven in the middle, lengthwiſe, and the heart or woody matter taken out.

When in the earth it ſhoots out tendrils, ſome of which creep along the ground, and the reſt wind about the neighbouring ſhrubs.

TURBITH, is a violent purgative, uſed in the dropſy, palſey, and apoplexy; being commonly ſuppoſed to take its name, turbith, from turbare, on account of the violence of its operation, as diſturbing the whole œconomy. It yields a deal of reſinous matter in a ſpirituous menſtruum, which Dr. Quincy obſerves, does not much affect the larger paſſages; but is very active in the ſmaller veſſels, and glandulous contorſions, which it wonderfully clears of all viſcid adheſions. Some apothecaries, either thro' ignorance or parſimony, ſubſtitute white thapſia, which they call grey turbith, or turbith garganicum, for the true turbith; tho', as to taſte, colour, and qualities, they are very different.

Mineral TURBITH, is a name given by the chemiſts to a yellow precipitate of mercury, which purges violently. This powder is called mineral turbith, from the reſemblance it bears to the vegetable turbith of the Arabians, in ſtrongly purging the moſt internal receſſes of the body: for, tho' it is inſipid on the tongue, yet it is poſſeſſed of conſiderable virtues. A very few grains of it will prove emetic and purgative. It is alſo accounted an excellent medicine in the venereal diſeaſe: but, as it operates with conſiderable violence, it ought not to be given, unleſs the viſcera are known to be ſound.

TURCOIS, or *Turquois*, in natural hiſtory, a precious ſtone, of a blue colour, ordinarily opake; but ſometimes a little tranſparent. There are turcoiſes both oriental and occidental; of the new rock and the old. The oriental partakes more of the blue colour than the green; and the occidental more of the green than the blue. Thoſe of the old rock are a deep blue; but thoſe of the new rock are more whitiſh, and do not keep their colour. The oriental ones come from Perſia, the Eaſt Indies, and ſome part of Turky; and ſome even ſuppoſe that it is hence they derive their modern name of *turcois*. The occidental are found in various parts of Europe, particularly Bohemia, Sileſia, Spain, and France. They all grow of a round or oval figure, and are cut eaſily; but, beſides ſeals, which are frequently engraved on them, ſome are formed into crucifixes, or other figures, near two inches high; tho' De Boot miſtakenly affirms, that none have been known to exceed the bigneſs of a walnut.

The turcois is eaſily counterfeited, and ſo perfectly, that it is impoſſible to diſcover the deceit, without taking it out of the collet. In the memoirs of the academy of ſciences, there is a very curious account of the formation of the turcois; where it is obſerved to be one of the ſofteſt of precious ſtones; its hardneſs ſcarce exceeding that of chryſtal, or a tranſparent pebble; tho' ſome are much harder than others: and ſtill the harder, the more valuable, by reaſon of the vivacity of the poliſh, which is always proportionable to the hardneſs.

Roſnel, a jeweller, and the author of a ſcarce treatiſe, called Mercure Indien, eſtimating the ſeveral precious ſtones, ſets a hard turcois, whoſe blue is neither bright nor deep, on the foot of the moſt perfect emeralds; that is, on a level with a diamond: but thoſe with any defect, he only values at about 4 s. ſterling the caract.

Tavernier aſſures us, there are but two mines of turcoiſes known in all the earth, and thoſe are both in Perſia; the one called the Old Rock, near a town called Necabourg, three days journey to the N. E. of Meſched; the other called the New Rock, is five days journey. The latter, ſays he, are but little valued; and the king of Perſia has for many years prohibited the digging in the former for any but himſelf. Mr. Reaumur takes the old rock to be now exhauſted. In effect, the common diviſion of turcoiſes into the old rock, or oriental, and new rock, or occidental, is very arbitrary and precarious. All the beſt and moſt perfect, grow they where they will, in India or Europe, are reckoned among the former; and the reſt among the latter.

Near Simore, in the Lower Languedoc, are conſiderable mines of Turcoiſes; but that fine colour admired in them, is not natural to thoſe rocks; the prevailing colour being ſometimes white, and ſometimes much like that of tripoli of Venice. Other precious ſtones are dug out of the mines with all their colour, to the force whereof nothing can be added; tho' it may frequently be diminiſhed, as we ſee fire bring down the too deep colour of the ſapphire. Theſe turcoiſes, on the contrary, are naturally whitiſh or yellowiſh; of a colour as common as that of a free ſtone; and by oppoſing them for ſome time to the action of the fire, they aſſume a blue colour. It ſeems a paradox, and yet Mr. Reaumur has made it exceeding probable, that turcoiſes are originally the bones of animals: for, in the mines of France, pieces have ſeveral times been found reſembling teeth, bones of the arms, and legs: and thoſe which are yet imperfect and half formed, are apparently compoſed of laminæ, or leaves like thoſe of bones, between which ſome petrifying juice inſinuating itſelf, binds them cloſe together; but ſtill the ſofter and more imperfect the ſtones are, the more diſtinguiſhable are the different directions of the fibres and laminæ, with their interſections; as alſo the greater reſemblance they bear to fractured bones, and the leſs to any kind of ſtones known. To give them the blue colour, they dry them a while in the air, and then heat them gradually in a furnace made after a particular manner. If they are heated too haſtily, the humidity between the laminæ, wanting time to evaporate all, will ſeparate into ſcales or flaws. Some of the ſtones require a greater degree of heat to bring them to their colour than others; and even in large pieces, ſeveral parts ordinarily require ſeveral degrees of heat. On this account, a great deal of care is to be taken in the heating them; for the fire which gives them their blue by degrees, if they are expoſed beyond a certain degree, takes it away again.

Mr. Reaumur accounts for their taking a blue colour by heat very well: when freſh cut out of the rock, it ſeems, their ſubſtance is found ſprinkled and ſtreaked all over with ſpots, veins, and little circles, of a dark blue colour; theſe he takes to be the remains of a deep bluiſh matter, which the fire rariſying, ſpreads and diffuſes throughout the whole ſubſtance of the ſtone. This matter, again, he concludes to have been either originally the juice contained in the bones, ſince mixed and coagulated with the petrifying juice, or ſome other mineral matter inſinuated into the pores of the ſtone.

The great defect of all turcoiſes is, that they loſe their blue colour, and become green, when they ceaſe to be of any value.

TURF, *Peat*. A blackiſh, ſulphurous earth, uſed in ſeveral parts of England, Holland, and Flanders, as fewel.

In Flanders, their turf is dug or pared off the ſurface of the earth, and cut in form of bricks. The gramen, a ſpecies of graſs, growing thick on the turf-earth, contributes greatly, when dry, to the maintenance of the fire. The Dutch draw their turf from the bottom of the dikes, or canals, running along moſt of their lands; whereby they not only ſupply the defect of wood, which is very great in moſt of the United Provinces, but alſo keep their dikes clear and navigable. This turf-earth is very black; and as they take it from the bottoms of the dikes, they ſpread it about the edges, of ſuch a thickneſs, as that it may be reduced to three inches when moderately dried. In this condition they cut it into pieces or turfs, ſeven or eight inches long, and three broad; and to complete the drying, lay them up in heaps, and at laſt in ſtacks.

In the north of England and Scotland, turf or peat is dug out of a ſoft, moiſt, rotten earth, called peat-moſs. They dig horizontally from the ſurface, to the depth of about four feet with a ſpade, which at once takes them out, and faſhions them in paralloelpipeds nine or ten inches long, and three ſquare; which are ſpread on the ground to drain as faſt as dug; and ſet up an end three or four againſt each other, for the wind to blow through them, and at laſt ſtacked or houſed. The pits or dikes in a few years fill up again, and afford a freſh crop.

TURIN. A city of Italy, capital of Piedmont, and of the King of Sardinia's dominions, ſituated in 7 deg. 16 min. of E. lon. and 44 deg. 50 min. of N. lat. at the confluence of the rivers Po and Doria, 100 miles S. W. of Milan, 150 S. E. of Lyons, and 100 miles N. W. of Genoa. See *Italy*.

TURKY. The Turkiſh empire extends itſelf into three parts of the world, Aſia, Africa, and Europe.

Turky in Aſia extends from the 29th deg. of N. lat. to the 45th, and from the 27th deg. of E. lon. to the 46th, taking up 19 deg. of lon. and 16 of lat. being upwards of 1000 miles in length, and 960 broad. It is bounded by the Black ſea, and Tartary, towards the north; by Perſia, towards the eaſt; by Arabia deſerta, towards the ſouth; and by the Archipelago, and the Levant, towards the weſt. It is uſually divided into Eaſtern and Weſtern Turky. Eaſtern Turky contains Eyraca Arabic or Chaldea, Diarbec or Meſopotamia, part of Curdiſtan or Aſſyria, Turcomania, the antient Armenia Major, and part of Georgia and Mingrelia. Weſtern Turky contains part of Arabia Petræa and Deſerta, Paleſtine, Syria, and Natolia, or Aſia Minor.

Turky in Africa is confined to Egypt; for the princes of the Barbary coaſt are ſo independent of the Grand Signior, that he has very little influence on them. See *Barbary*, and *Egypt*.

Turky in Europe is bounded by the river Neiſter, and the Carpathian mountains, which divide it from Poland, towards the north; by Little Tartary, Crim, and the Euxine or Black ſea, towards the eaſt; by the Archipelago, the Ionian, Egean, and the Mediterranean ſeas, towards the ſouth; and by Hungary, Sclavonia, Croatia,

and the Adriatic ſea, towards the weſt. It comprehends the following countries: Greece, in which is contained Macedon, Theſſaly, Achaia, Epirus, Albania, Morea, and the Archipelago iſlands; Romania, Bulgaria, Servia, Boſnia, Raguſa, Walachia, Moldavia, and Beſſarabia; with Budziack, Oczacow, Little and Crim Tartary.

The ſeas of Turky are the Euxine or Black ſea, the Palus Meotis, the Propontis, or the ſea of Marmora, the Archipelago, Ionian and Egean ſeas, and the Levant, or the moſt eaſterly part of the Mediterranean ſea.

The principal rivers of Turky in Aſia are the Euphrates and Tigris; in Africa, the Nile; and in Europe, the Danube, Nieſter, Bog, and Nieper, or Boriſthenes.

The principal towns of Aſiatic Turky are as follow.

Bagdat, is a ſtrong town on the frontiers of Perſia, ſituated upon the river Tigris, in 43 deg. of E. lon. and 33 deg. 20 min. of N. lat. being the principal town of Eyraca Arabic. Its trade is not inconſiderable at preſent; being ſupplied with all the merchandiſe of the Eaſt by the way of Boſſora, which ſtands between the mouth of the united ſtreams of the Tigris and Euphrates. It is annually viſited by the caravans from Aleppo, Smyrna, and the weſtern part of the Turkiſh empire; whereby it is furniſhed with the produce of thoſe countries.

The capital city of Curdiſtan is *Sheraſoul*, which lies to the eaſtward of Nineveh, in the 36th degree of north latitude.

Amadia lies to the northward of Nineveh, in 37 deg. of N. lat. having a piazza in the middle of the town, where the merchants keep their ſhops, and is a place of pretty good trade.

The province of Curdiſtan, in general, is a very pleaſant fruitful ſoil, productive of galls, and tobacco in plenty. There are ſcarce any towns and villages; but the houſes lie diſperſed at the diſtance of a muſket ſhot from one another; though there is ſcarce a houſe which has not a vineyard: however, they make no wine, but dry their grapes.

The province of Diarbeck, or Meſopotamia, lies between the rivers Tigris and Euphrates; its chief towns being Bir, or Beer, ſituated upon the eaſtern bank of the river Euphrates, four days journey to the eaſtward of Aleppo. The next city is Orfa, ſituated in 36 deg. of N. lat. remarkable for the manufacture of yellow maroyne, or Turky leather; the red being made at Diarbeck, and the blue at Tocat.

On the weſtern bank of the river Tigris ſtands the city of *Mouſſul*; a place of good trade, being the ordinary road for the caravans from Aleppo to Perſia. It has alſo a communication with Bagdat, and the gulph of Perſia, by means of the Tigris. The neighbouring countries produce galls abundantly, which make a conſiderable part of its trade.

The city of *Diarbeck* is ſituated in 38 deg. of N. lat. on the right-ſide of the Tigris. It has a canal, cut from the ſame river, which ſupplies it with water, and in which all the red Turky leather made at Diarbeck is waſhed. This leather excells all others in colour, and employs at leaſt one-fourth of the natives, who are very numerous. The ſoil is good in the neighbouring country, and abounds in corn and wine.

To the northward of Diarbeck and Curdiſtan, lies the province of Turcomania, or Armenia Major, whoſe chief town is Erzerum, or Arzeron, ſituated in 41 deg. of E. lon. and 40 deg. of N. lat. about five days journey to the ſouth of the Black ſea. The Greeks, who live here, are for the moſt part handicrafts, and have their quarter in the ſuburbs, where they make copper-utenſils, from the ore which is in the neighbouring mountains. They have alſo a pretty briſk trade for furs, eſpecially thoſe of Jardava, where there are ſkins not unlike thoſe of martens.

Erzerum is a conſiderable thorough-fare from Perſia and India to Conſtantinople, by way of Trepeſond, and the Black ſea; which way the merchants chuſe to take, to avoid the Arabs, who lie on the road to Aleppo.

Smyrna, is ſituated on a bay of the Archipelago, in 27 deg. of E. lon. and 37 deg. 30 min. of N. lat. in the province of Ionia, 100 miles north of the iſland of Rhodes, and 200 miles ſouth-weſt of Conſtantinople; being one of the largeſt and moſt commodious harbours of the Levant; and has ſo great a foreign trade, that conſuls reſide here from moſt of the European trading nations.

Aleppo, is ſituated in 37 deg. 40 min. of E. lon. and 36 deg. 30 min. of N. lat. 90 miles eaſt of the Levant, and port of Scanderoon; having conſiderable factories for the European merchants.

Tripoli, is a port-town of Syria, ſituated near the ſea, in 36 deg. 15 min. of E. lon. and 34 deg. 30 min. of N. lat. The port is rather a road than a harbour; but is however a little covered from the wind by two iſlands, which lie about two leagues from the ſhore. A rivulet runs through the town, and waters the gardens about it, which are full of orange-trees, and white mulberries; ſo that it has a conſiderable ſilk manufacture.

Damaſcus, otherwiſe called *Sham* by the Turks, ſtands in 37 deg. 20 min. of E. lon. and in 33 deg. 51 min. of N. lat. two days journey to the eaſtward of Sidon, and the Mediterranean ſea. One of the principal manufactures here is the making of ſword-blades, knives, and other utenſils of iron; the water being eſteemed excellent for tempering their metal. The branching of damaſks is another manufacture in which they excel. Soap, raw and unwrought ſilk, wine, prunes, and roſe-water made of the damaſk-roſes, which grow plentifully here, are alſo ſome of the principal merchandiſes brought from hence.

The chief towns of *Natolia* are Sattalia, a port-town, which has a pretty good harbour, but of difficult entrance; Syda, or Candalor, a port-town, ſituated more to the eaſtward; and Aiazzo, or Lajazzo, ſituated on a bay, to which it gives its name.

Tocat, is the capital of the province of Amaſia, ſituated in 37 deg. of E. lon. and 41 deg. 30 min. of N. lat. The country is inhabited chiefly by Armenian Chriſtians, moſt of them handicrafts, particularly copperſmiths. Another great manufacture is Turky leather made of goat-ſkins. The wine of Tocat is excellent, and they have almoſt all manner of fruits in great plenty; with better accommodations for merchants and travellers in their caravanſeras, than in moſt towns of Turky. It is one of the greateſt thorough-fares of the Eaſt; for here the caravans lodge which come from Perſia, Diarbeck, Bagdat, Conſtantinople, Smyrna, Synope, and other places. There runs a fine river about a quarter of a league from the city; and no part of Aſia affords more ſaffron, which is as profitable a commodity as can be carried to the Eaſt Indies; where the natives uſe vaſt quantities of it in their food, as well as upon other occaſions. When the caravans ſet out either way from Tocat, the toll-gatherer numbers all the camels and horſes as they paſs by; where he takes for every camel loaden half a rix-dollar, and for every horſe half as much; but nothing for thoſe beaſts that carry paſſengers, or proviſions. However, theſe duties are arbitrary, being raiſed, or leſſened, as the Baſhaw pleaſes, or the exigences of the government require.

Trapeſond, or *Trepiſond*, is ſituated in 42 deg. 20 min. of E. lon. and 42 deg. 26 min. of N. lat. at the foot of a little ſteep hill by the ſea-ſide. The port is to the eaſtward of the city; and ſo commodious formerly, that it occaſioned a very great trade; but is now almoſt deſtroyed, and cannot be entered by veſſels larger than the Turkiſh ſaiques.

The chief cities of *Pontus* and *Paphlagonia*, are Penderachi, a ſea-port in the N. W. part of this country; Semaſtro, a ſea-port, ſituated at the mouth of the river Parthenius; and Sinope, a large town towards the S. E. ſtanding upon the iſthmus of a peninſula, about 6 miles in circumference, having a harbour on each ſide of the iſthmus.

The moſt remarkable towns of *Galatia* are, Therma, famous for its hot baths; Angoura, or Angouri, ſituated in 33 deg. of E. lon. and 41 deg. 5 min. of N. lat. on the river Melus; in which are computed about 4000 Mahometans, 4 or 5000 Armenians, and 400 Greeks. The caravans uſually make 10 days journey from hence to Pruſa, and 20 to Smyrna.

In the country about Angoura are ſaid to be the fineſt breed

breed of goats in the world; they are of a pure white; their hair, which is as fine as ſilk, being curled, and 8 or 9 inches long, which is worked up into the fineſt ſtuffs and camblets. This is the great manufacture of the country, and makes Angouri a place of good trade; but theſe kind of goats are not to be met with above 4 or 5 days journey from this city; and, if carried farther, the breed degenerates.

The principal places of European Turky are as follow.

Conſtantinople, the capital of the empire, is ſituated in 29 deg. 15 min. of E. lon. and 41 deg. 30 min. of N. lat. called by the Turks *Stamboul*, and frequently by European nations the *Porte*; being one of the moſt ſecure and convenient harbours in Europe.

It is of a triangular figure, two ſides of it being waſhed by the ſea. The harbour is about three miles long, and one over, and ſo deep from one end to the other, that the ſhipping may lie cloſe to the ſhore, at a little diſtance. It lies in the province of Romania, and is ſurrounded by a wall, about 12 miles in circumference; excluſive of Galata, and the other ſuburbs. There is a public market daily at Conſtantinople; where men purchaſe wives, concubines, and ſervants, at pleaſure, who have been either taken priſoners in Chriſtian countries, or purchaſed by Jew brokers in Georgia, Circaſſia, and other places.

The ſecond city in this province is *Adrianople*, ſo called from the Emperor Adrian; which is ſituated about 140 miles N. W. of Conſtantinople, and ſtands for the moſt part on a flat, in a fruitful country, being watered by ſeveral rivers; of which the chief are the Meriza, the Tungia, and the Arda, over which there are three ſtone-bridges. The circumference is computed to be about 8 miles, including the gardens; and it is ſaid to contain about 100,000 inhabitants. In this city is a noble bezeſtin, or exchange, near half a mile in length; having between 3 and 400 ſhops on the ſides, furniſhed with rich goods; and near it is a covered ſtreet, a mile in length, full of good ſhops from one end to the other; the tradeſmen having a particular quarter to themſelves in moſt of the cities of Turky, and are not diſperſed over all parts of the town.

Gallipoli, is another town of Romania, ſituated at the mouth of the Propontis, or ſea of Marmora, on the Thracian Cherſoneſe, where the ſtrait between Europe and Aſia is about 5 miles over. It is computed to ſtand about 100 miles S. W. of Conſtantinople, and 25 miles N. E. of the Dardanells; having two ports, or bays, for the reception of gallies, one to the ſouthward, and the other towards the north.

Seſtos, is about 25 miles S. W. of Gallipoli; where ſtands one of the caſtles of the Dardanells. The ſea is about two miles over at this ſtrait; on each ſide whereof theſe caſtles of the Dardanells ſtand, and take an account of all ſhips bound for Conſtantinople; but the diſtance between them ſeems to be too great to hinder ſhips paſſing on towards that city.

Heraclea, is alſo a town of Romania; being formerly a great city, ſeated upon the ſea of Marmora: the harbour is pretty ſecure, but not deep enough for large veſſels; and the entrance of it hazardous, on account of ſome rocks which lie almoſt even with the water.

Rodoſto, which ſtands but a few hours from Heraclea, on the ſame coaſt, is a large populous town, with a good harbour; and has a conſiderable trade.

Salonichi, or *Theſſalonica*, is ſituated at the bottom of a bay in the Egean ſea, to which it gives its name, lying in 24 deg. of E. lon. and 41 deg. of N. lat. It enjoys a pretty good trade, being reſorted to by the Engliſh and other weſtern nations of Europe, who import from hence raw ſilk, Turky leather, cotton, bees wax, and ſome other commodities.

Conteſſa, is a ſmall trading town, about 80 miles to the eaſtward of Theſſalonica, giving its name to a bay of the ſea on which it ſtands.

Dolcigno, or *Dulcigno*, is a port ſeated on the gulph of Venice, in 19 deg. of E. lon. and 42 deg. 5 min. of N. lat. about 40 miles to the weſtward of Aleſſo, and 50 miles S. E. of Raguſa.

Chimera, ſituated to the north part of Epirus, upon the ſea-coaſt, is a place of ſome trade; and ſo is *Lariſſa*, ſituated near Mount Olympus, upon the river Peneas.

Pegaſa, now *Volo*, 40 miles eaſt of Lariſſa, is ſaid to have a tolerable harbour.

Zeiton, gives name to a bay over againſt Negropont, and ſtands 30 miles to the weſtward of that iſland.

Lepanto, ſtill called *Epactos* by the Greeks, is ſituated in 23 deg. of E. lon. and 38 deg. of N. lat. near the mouth of the gulph, to which it has of late communicated its name. The mouth of the harbour is ſo narrow, that it may be ſecured by a chain of 50 feet long; but is too ſhallow for any veſſels to enter, except barks, or gallies. It is now the moſt conſiderable town on the gulph; having a good trade in leather, oil, tobacco, rice, corn, and wine.

Livadia, an antient town, which at preſent gives name to the country, is ſituated on the gulph of Lepanto, about 20 miles to the weſtward of the iſthmus of Corinth, in 23 deg. 15 min. of E. lon. and 37 deg. 30 min. of N. lat. It is populous, and has a pretty good trade in woollen ſtuffs, and rice.

Napoli di Romania, ſituated at the bottom of a gulph of the Egean ſea, ſtands on a promontory divided in two parts, one ſide whereof ſhoots into the ſea, and forms a fine harbour; whoſe entrance is ſo narrow, that more than one veſſel cannot enter it at a time; and the paſſage to it by land is almoſt inacceſſible, being a narrow ſtony ſtrait between the mountain Palimida and the ſea. The town contains about 60,000 inhabitants, and lies in 23 deg. 20 min. of E. lon. and 37 deg. 30 min. of N. lat.

Modon, or *Mutum*, is ſituated on the ſouth-coaſt of the Morea, over againſt the little iſland of Sapienza, in 21 deg. 30 min. of E. lon. and 37 deg. of N. lat. It is a wealthy trading city, and a place of great ſtrength, with a commodious harbour.

But Conſtantinople, Smyrna, and Aleppo, are the moſt remarkable places of trade for the Europeans; which require a more particular repreſentation.

The commerce of Conſtantinople. The happy ſituation of this large city, joined to the beauty and ſafety of its port, might make it the moſt mercantile place in the world, if the inhabitants were not ſubject to a ſervitude which almoſt deprives them of the property of their ſubſtance; or if ſtrangers, whom commerce brings there, were treated with leſs haughtineſs and ſeverity, or were not expoſed to ſuch great and frequent extortions.

However, a great number of European ſhips arrive there; and moſt trading nations have a miniſter at the Porte, as well for protecting their merchants, as for political intereſts.

But the Engliſh and Dutch carry on moſt buſineſs at Conſtantinople, particularly upon account of the ſale of their woollen cloths. The French alſo drive on a conſiderable trade in cloth manufactured after the manner of the Engliſh and Dutch; and the Venetian cloths are much eſteemed at Conſtantinople, though little valued in all other parts of the Levant.

The woollen cloths for Conſtantinople ſhould be fine, thin, well milled, ſheared cloſe, well preſſed, of the beſt dye, and very exact in the breadth.

The ſale of cloth might amount, one year with another, to 8 or 9000 pieces; one fourth Dutch, ſomewhat more than a third of Engliſh, and the reſt of French or Venetian.

Theſe cloths are uſually ſold for a third in ready money, and the two other thirds at ſix months credit. The Engliſh and Dutch eſtabliſhed this manner of ſale, which undoubtedly is attended with its inconveniencies, upon account of the danger to be expected from the frequent fires at Conſtantinople, as theſe often conſume the warehouſes belonging to the purchaſers, and deprive the merchants of all hopes of payment; but the greateſt danger ariſes from the death of debtors, who have no inheritance in Turky, and can leave nothing to be taken hold of by the ſellers.

But the Engliſh and Dutch found that ſuch a credit facilitated their trade, and gave them an opportunity of con-

ſiderably raiſing the price of their cloths; which obliged the French, and other nations, to follow their example, to get ſome ſhare in the ſame trade.

There is alſo a conſiderable commerce in French, Italian, Dutch, and Engliſh ſtuffs, of ſilk, gold, and ſilver; the principal of which are Florence ſatins, tabbies, Venetian damaſks, flowered brocades, and Genoa flowered velvets.

The ſale of ſatins amounts, one year with another, to 5 or 600 pieces; tabbies to 3 or 400; damaſks without gold to 60 pieces, with gold to 100; and about as much of velvets.

Go'd and ſilver flowered brocades ſell beſt at Conſtantinople, but only ſuch as are purpoſely made from patterns fit for the place; for it is not the richneſs of the ſtuff which pleaſes the Turks moſt, but the luſtre and cheapneſs.

Paper is alſo a good commodity for Conſtantinople, eſpecially that of France and Venice.

The other merchandiſe proper for Conſtantinople are hard-ware, tin, braſs and iron wire, which the Engliſh and Dutch bring from Hamburg and the Baltic; Poliſh fine gold wire; as alſo falſe gold and ſilver wires of the ſame country, which the Venetians ſell to them; Marſeilles caps, or thoſe of Tunis, called Fez caps; Montpelier verdigreaſe, Marſeilles oil of aſpic, tartar; ſugar imported by the Dutch and Engliſh, when the crop in Egypt fails; as alſo ſpice, camphor, quickſilver, lead, cochineal, and Brazil ceruſe.

But few merchandiſes are exported from Conſtantinople, in compariſon to what are imported there; ſo that, to make up the balance, European traders have bills of exchange drawn upon Conſtantinople by their correſpondents in Smyrna and Aleppo; or get money remitted to theſe two towns, for purchaſing a ſufficiency to complete their cargo.

The few merchandiſes European ſhips yearly take in at Conſtantinople, are wool, to the amount of 5000 bales; buffaloes hides, about 10,000 ſent into France and Italy; ox and cow hides 50,000, whoſe conſumption is for Italy; potaſhes brought from the Black ſea, and bought up by the Engliſh and Dutch; wax; ſome goat-hair thread; and, laſtly, a great quantity of caviac, or pickled ſturgeons roes, of which the Italians are very fond; ſo that they are uſually bought up by the merchants of Venice and Leghorn.

The ſale of ſlaves, of both ſexes, in the jaſſir-bazar of Conſtantinople, or ſlave-market, may be alſo looked upon as one of the principal parts of the trade of Conſtantinople; for, beſides thoſe brought from Barbary, or taken in wars againſt the Chriſtians, great numbers are alſo brought from Georgia, Mingrelia, Circaſſia, and ſeveral parts of the Black ſea.

The ſale always begins by a prayer for the Sultan; and, when it is ended, the crier publiſhes with a loud voice the price of the ſeller, who ſtands always near his ſlave, whoſe face and body is covered with a kind of ſcarf: if a purchaſer preſents himſelf, he lifts up the covering, to ſee whether the merchandiſe is agreeable to him; and the price being ſettled, the unhappy victim of avarice and cruelty follows its new maſter to his houſe.

Commerce of Smyrna. The great number of European ſhips reſorting continually to Smyrna, and the many caravans arriving there from Aſia, make it the moſt mercantile town of the Levant, for which it is happily ſituated. The port is ſo capacious, that it may contain ſeveral fleets; and the greater part of the principal foreign merchants have handſome and commodious houſes of their own; nothing being more ſuperb and magnificent than the apartments for the conſuls, which are all near the ſea.

Private perſons, who continue there only for a certain time, or who are willing to avoid expences, have the conveniency of kans; which are like ſo many great inns, where upwards of a thouſand perſons may lodge, and where every chamber is lett only for a piaſter, or about 3 s. 7 d. ſterling a month.

There are two cuſtomhouſes at Smyrna; the one, which is the greater, called the cuſtomhouſe of commerce, where the duties are paid for ſilk, and other merchandiſe brought by the Armenians from Perſia, and for thoſe which Chriſtian nations unload or load there for their returns; the other, called the cuſtomhouſe of Stamboul, or Conſtantinople, regards only the commerce of this capital of the Ottoman empire, of Salonica, and other parts of Turky.

The caravans have fixed times for their arrival and departure; upon which European nations regulate themſelves for the cargoes of their ſhips, that the Aſiatics may take off with them the merchandiſe of the Weſt, and Europeans for their return thoſe of Aſia.

Of the Aſiatic nations, the Armenians are thoſe who trade moſt at Smyrna; the Perſian caravans being almoſt entirely compoſed of them, and upwards of 12,000 Armenians are eſtabliſhed in the town.

As to Europeans, the Engliſh are more conſidered there than any other nation, and more favourably treated. The Dutch ſend there the greateſt number of ſhipping, and the French the greateſt number of people.

The merchants of Leghorn alſo carry on a conſiderable trade at Smyrna; thoſe of Venice ſomewhat leſs: but the Genoeſe, notwithſtanding their great expences for trading under their own flag, have very little; and the merchants of Meſſina, ſince the year 1660, none at all.

The French ſhips, which, one year with another, are about ten, without reckoning other ſmall veſſels, depart uſually from Marſeilles; and their cargo conſiſts in piaſters; Carcaſſone, Sapte, and Dauphiné cloths; perpetuanas, imperial ſerges, caps, paper, cochineal, verdigreaſe, indigo, tin, wood for dying, ſpice, and ſugar.

The returns being almoſt the ſame for all European nations trading to Smyrna, one general article will be made of them, which will have its place lower down.

If the preſent trade of the French to Smyrna is compared with what they carried on formerly, a few ſlight traces of its flouriſhing condition could only be found; and ſome of their own authors ſtrive to account for its decline, by ſaying, that it was firſt owing to the frequent extortions which the indiſcretion of ſome French miniſters at the Porte, and the ill conduct of ſome French merchants, had often brought upon the nation, which amounted to incredible ſums.

Secondly, the crying down of the pieces of five ſols; the trade of which commenced in 1656, and continued for 13 years, whereby the French firſt gained *cent. per cent.* giving them upon the footing of 10 ſols: but theſe having been afterwards conſiderably altered, particularly by Italians, were at laſt diſcredited throughout all the ſtates of the Grand Signior.

Thirdly, the too great number of French merchants eſtabliſhed at Smyrna, and their mutual jealouſies of each other; of which the Engliſh and Dutch know how to make a conſiderable advantage.

Laſtly, and principally, the ill qualities of their cloths, both in dying and breadth; which were not ſo well diſcovered till the Levantines compared them with thoſe of the Engliſh and Dutch, which were by far ſuperior, both in the goodneſs of the dye, and an exact breadth.

The number of merchant-ſhips which depart from England for Smyrna, is not fixed; but are increaſed, or diminiſhed, according as the company has intelligence that the Engliſh warehouſes are full or empty.

They formerly ſent to Turky about 30,000 pieces of cloth yearly; as alſo pepper, tin, lead, and a great quantity of ſilver ſpecie, brought particularly from Spain and Italy.

The Dutch commerce to Smyrna is almoſt the only part of their Levant trade, which is very conſiderable, on account of their cloths, ſpice, and other merchandiſe; as alſo in the profits of their ſilver, which is of a bad alloy.

The Dutch ſhips freighted every year, particularly for Smyrna, are uſually 12, which go in two fleets, and depart within two months of each other. The time they take up in ſelling their merchandiſe, and loading thoſe of Aſia, is four or five months; but, in their return, they touch at ſome places of Italy, particularly at Leghorn, where they have a great trade.

The merchants of Leghorn ſend yearly four ſhips to Smyrna, the Venetians two or three, and ſometimes a few Genoeſe veſſels are ſeen there.

The

The cargo of the Leghorn ſhips conſiſts in cloths, ſatins, cochineal, lead, tin, and ſpice, which they receive from the Dutch. That of the Venetians is in cloths, which always ſell well in Conſtantinople, but not ſo in Perſia; brocades, ſatins, factitious pearls, looking-glaſſes, and glaſs for windows. But when there is a ſhip from Genoa, its cargo conſiſts only in the ſpecie current at Smyrna, and in all ſorts of ſilk ſtuffs of their own manufacture.

The merchandiſe brought from the Levant, and particularly from Smyrna, are ſilks, goat and camels hair, either ſpun or unſpun, and thoſe called torts; white and painted calicoes; muſlins, ſome of which are embroidered with gold, ſilver, and ſilk; cotton, in wool, or thread; prepared leather, either Cordovan or Morocco; leather dreſſed and undreſſed, of buffaloes, oxen, and cows; coloured camblets; wool, particularly that of Caramania; wax, alum, nut-galls, box-wood, currants; ſeveral ſorts of drugs, as galbanum, rhubarb, hippoponax, amber, muſk, ultramarine, ſal armoniac, ſcammony, opium, maſtic, ſtorax, ſaffron, ſoap; divers gums, ſuch as agaric, and adraganth; a diverſity of carpets; laſtly, pearls, diamonds, rubies, emeralds, and other precious ſtones, which are ſold privately by the Armenians, who bring them with the caravans, and often go themſelves into Europe to ſell them.

Of this great number of merchandiſe, ſcarce any but ſcammony, opium, and nut-galls, are of the growth of Smyrna, or cultivated in the neighbourhood of the town; the reſt being ſo abundantly brought there from ſeveral parts, and the ſhops are always ſo well ſtocked with them, that the whole town might be ſaid to be one entire bazar, where a continued fair is held, in which all the neceſſaries of life are to be had, and even many articles of luxury.

Some years there are purchaſed at Smyrna to the amount of 7 or 800 bales of ſilk, 30,000 of rhubarb, and between 4 and 500 bales of wool.

In general, the greateſt ſale of European merchandiſe at Smyrna is that of woollen cloth; and the greateſt purchaſe of the Levant merchandiſe that of ſilk, as alſo goat and camels hair.

Exchange is lowered or increaſed at Smyrna, as elſewhere, according to the ſituation of affairs. When merchandiſes are at an extraordinary price, there is a loſs from 15 to 20 *per cent.* and when there is a profit in merchandiſe, the exchange is ſometimes on a par, and very often at 3 or 4 *per cent.* benefit.

The maritime exchange is from 6 to 8 *per cent.* and the bearer runs the riſque.

The exchange from Smyrna to Conſtantinople loſes from 1 to 2 *per cent.*

The duties of importation and exportation, called duties of ermin, are different, purſuant to the different treaties of Chriſtian nations with the Porte; but the Engliſh, ſince 1599, have paid only 3 *per cent.*

The French, for a conſiderable time, paid upon the footing of 5 *per cent.* and it was only in purſuance of the capitulations renewed in 1673, by Mr. de Nointel, ambaſſador of France, that their tariff has been regulated purſuant to that of the Engliſh.

The Chriſtian nations which keep conſuls at Smyrna, are the Engliſh, Dutch, French, Venetians, and Genoeſe, who may ſend their ſhips there under their own flag; but others take the French flag, being under the protection and juriſdiction of the French conſul.

It is certain that foreign merchants are expoſed to great extortions from the baſhaws, governors, and other ſubaltern officers at Smyrna, as alſo in all other port-towns of the Levant; which is even very frequently authoriſed by the divan, and the orders of the Grand Signior.

However, there is ſcarce a trade carried on with greater eaſe, and leſs charged with national duties and impoſts.

Declarations, either coming ſhort of, or exceeding weight, quality, or number of merchandiſe, are neither puniſhed with confiſcation nor double duties, as in the greater part of the ſtates of Chriſtian princes; but are acquitted by paying a duty for what has not been declared.

The duties are not only very moderate, but ſometimes a diminution is obtained, particularly with regard to the merchandiſe whoſe duties are paid by eſtimation; in which the Turkiſh cuſtomhouſe-officers are never rigorous.

Laſtly, in diſputes ariſing among merchants, with regard to commercial matters, every nation has its particular judge, which protects them from the juriſdiction of the cadis.

The commerce of Aleppo; and Scanderoon, or Alexandretta. Aleppo is one of the principal cities of the Turkiſh empire, both for extent and commerce: but two things are particularly obſervable here with regard to trade; the one is, the uſe of pigeons for giving notice of the arrival of ſhips, and other important and ſecret affairs; the other is the prohibition of going from Alexandretta to Aleppo any other way than on horſeback. The reaſon for the former is evident; and that of the latter is to prevent ſuch ſailors as have brought a little ſpecie with them, from running to Aleppo, and buying up merchandiſe, either through ignorance, or the impatience of returning aboard their ſhips, for 4 or 5 *per cent.* more than they are worth.

The hiring of horſes was fixed at about 21 s. 6 d. ſterling for going, and as much for returning; which, with the other expences of the journey, amounted to about 5l. 18 s. 6 d. ſterling, whereby a ſtop was put to this unſeaſonable trade, as the beſt part of the ſailors little fund was conſumed in the expence.

All the European nations who trade to the Levant, have conſuls at Aleppo, and ſome of them vice-conſuls at Alexandretta; but, in the latter place, they ſerve ſometimes for one another: and Aleppo is one of the grand conſulſhips of Venice, which is only given to nobles.

There is ſcarce a part of the three antient diviſions of the world, but what ſends merchants to Aleppo. Beſides the Engliſh, Dutch, French, and Italians, who reſide there conſtantly, or trade there yearly, the caravanſeras are always filled with Armenians, Turks, Arabians, Perſians, and Indians, who come in ſuch great numbers, that though there are 40 of theſe public buildings, they are ſcarce ſufficient to contain thoſe who only reſort it for a ſhort time.

The Armenians eſtabliſhed there are about 12,000, who manage a great ſhare of the trade.

When European ſhips arrive at Alexandretta, they unload their cargo there, to be ſent to Aleppo in caravans; and a duty is paid of about 3l. 10s. ſterl. for each caravan.

The commodities for this port are the ſame as for Smyrna.

Thoſe which compoſe the cargoes of return are ſilk, either of Perſia, or the country; cotton cloths, of different ſorts; cotton in wool, or ſpun; nut-galls, cordovans, ſoap, ſilk ſtuffs, and beautiful camblets.

The manufacturers of theſe camblets and ſilks are the moſt numerous of all others, and poſſeſs the principal bazars at Aleppo.

All merchandiſes are uſually weighed by the rott, or rotulo, which is a common name for all Aleppo weights; though there are three kinds, and the common rott is 4 lb. 13 oz. avoirdupois.

Cottons and cordovans are ſold by the piece; but woollen cloths and ſtuffs are meaſured by the pic, or pico; 16 of the former being about 12 yards Engliſh, and 12 of the latter being about 8 yards Engliſh.

The commerce of Crim Tartary, or of Caffa, and the Black ſea. The Venetians have attempted ſeveral times to eſtabliſh a trade on the Black ſea, eſpecially at the town of Caffa, which is ſituated in 37 deg. of E. lon. and 44 deg. 55 min. of N. lat. on the S. E. part of the peninſula of Crim Tartary. They even obtained a privilege for this purpoſe in 1672, by the warm ſolicitations and great preſents made by the Chevalier Quirini. But the principal cuſtomhouſe-officer at Conſtantinople made a remonſtrance of this privilege; aſſerting that it would deprive the Grand Signior of the duties of exportation on the merchandiſe deſtined for this town, and others upon the ſame ſea; as alſo that the Chriſtians of Europe might, by this means, facilitate an intelligence with the Chriſtians inha-

biting theſe coaſts: upon which the privilege granted to the Venetians was revoked; and ſince that time no European nation could obtain another.

The road for ſhipping at Caffa is excellent, and its port is the only ſafe one upon the Black ſea; on which account a great trade is carried on at Caffa, where it is uſual to ſee 4 or 500 veſſels in a year.

There is alſo a conſiderable trade of corn, ſalt, furs, and butter; which laſt is eſteemed the beſt of all Turky: but what brings the greateſt number of ſhipping there, and what obliged the Venetian ambaſſador to purchaſe the liberty of its commerce at ſo dear a rate, was the great quantity of ſturgeons fiſhed for in the Palus Mæotis; whoſe pickled roes, called caviac, the Italians are exceeding fond of, as alſo ſome other nations of Europe and Aſia.

Perhaps there is an exaggeration in ſuch relations as aſſert, that ſome of theſe fiſh weigh 8 or 900 lb. and that 3 or 4 quintals of caviac may be had from ſome of them; for it is certain, that there are not any elſewhere, either ſo large, or in ſuch great numbers.

The commerce of furs brought from Ruſſia to Conſtantinople, or from Natolia, the Black ſea, Crim, and ſome other towns of Tartary, is very conſiderable at Caffa. The merchants of Europe have no ſhare in the purchaſe or ſale, for all is in the hands of the Greeks: but it may be ſuppoſed that they could trade here more advantageouſly than the Greeks, by bringing the furs directly from Archangel, where they can have them cheaper; and from whence the expences of tranſport by ſea would be leſs, as well as the cuſtomhouſe-duties paid at Archangel and Conſtantinople; whereas, by ſending them by land, theſe duties are paid in Muſcovy, at Megin in Moldavia, in the country of the Coſſacks, and at Conſtantinople.

The furs which the Greeks have from Ruſſia are ſables, ermins, and minevers.

The ſables are purchaſed and ſold by the cheſt; the cheſt containing 10 maſſes; and the maſs is compoſed of 20 pair of entire ſkins, that is, with the head, the feet, and the neck; the belly having no ſale at Conſtantinople.

One year with another, there might be ſold at Conſtantinople, 200 cheſts of ſables, from about 262 l. ſterling, to 330 l. the cheſt; each cheſt paying, both for the expences of carriage, and the cuſtomhouſe duties, about 52 l. ſterling.

The ermins are not eſteemed, but when extremely white; and they are ſold by the maſs, which conſiſts of 40 entire ſkins; the expences of carriage, and the cuſtomhouſe duties, amounting to about 21 s. ſterling for each maſs.

The minevers are ſold by the thouſand, from No. 1. to No. 4. and brought in ſacks, two of which make a horſe-load; the expences and duties of a thouſand to Conſtantinople being about 7 l. ſterling.

The merchandiſes which the Greeks carry into Muſcovy, and which they exchange for theſe three ſorts of ſkins, are Venetian brocades, taffeties of the country, gilt ſilver-wire, emeralds of a low price, ſapphires, red linens, ſilver in ſpecie, particularly piaſters, and ſequins of Hungary.

The other furs brought to Conſtantinople are martins, black pole-cats, lynxes, and foxes. Theſe four ſorts of ſkins come from Natolia, from whence there are brought annually to the value of about 10,500 l. ſterling.

A great quantity of black foxes ſkins are brought from Caffa and Tartary, to the yearly value of about 18,000 l. ſterling. They are much eſteemed, and more beautiful than thoſe of Natolia. Lamb-ſkins, which ſerve for furring veſts, ſell alſo pretty well, and uſually to the amount of about 1200 l. ſterling a year.

There are ſold at Caffa, one year with another, to the value of about 3000 l. ſterling in Venetian brocades. But the merchants alſo bring there another ſort of Venetian brocade, whoſe gold and ſilver are factitious, the flowers being like thoſe of damask, and of which they ſell to the amount of about 1200 l. ſterling a year.

There are alſo ſold yearly 10 or 12 bales of Engliſh woollen cloth, and to the value of about 3500 l. ſterling in damasks of Scio.

Taffeties have likewiſe ſuch a conſiderable ſale at Caffa, that to the value of 10,000 l. ſterling are annually ſold there, whoſe profit uſually amounts to 30 or 35 *per cent.*

To Caffa is alſo imported to the value of about 2400 l. ſterling in fuſtian of Scio, which brings about 50 *per cent.*

Beſides, there are brought about 4 or 5000 pieces of other fuſtians manufactured at Conſtantinople, whoſe profit is computed at 40 *per cent.*

There is the ſame profit in coffee, and Cairo flax; of the former of which there is ſold to the value of 3000 l. ſterling, of the latter to the value of 1000 l. ſterling.

At Caffa are gathered about 30,000 occos, or oaks, of wax, the oak being 2 lb. 11 oz. avoirdupois in London; a part of which goes to Smyrna, and another to Conſtantinople, which coſts about 1 s. 6 d. ſterling the occo; the duty of exportation being 5 *per cent.* and the importation at Conſtantinople 3 *per cent.*

There are 50 or 60 ſaiks, laden with wheat, ſent yearly from Caffa to Conſtantinople, where 25 occos are ſold for 1 s. 10 d. ſterling. There are alſo 15 or 20 ſaiks laden with barley, wherein the profits are conſiderable.

Great quantities of butter are bought at Caffa for 10 d. ſterling a pound, and is ſold at Conſtantinople for 1 s. 6 d. ſterling.

The profits in honey, of which Caffa furniſhes conſiderable quantities, are not leſs than thoſe of wax and butter.

Laſtly, ſome ſilk may be had from Caffa, but of an indifferent quality.

TURKISH *iſlands. Commerce of the Archipelago, or the iſlands of the Egean ſea.*

There are a great number of theſe iſlands; but only the following are remarkable for trade.

Amorgo, is ſituated in 26 deg. 15 min. of E. lon. and 37 deg. of N. lat. 90 miles north of Candia. The commodities brought from this iſland are oil, great quantities of corn, and ſome wine; as alſo lichen, a plant for dying red, much uſed in England. See *Lichen*.

Andros, is ſituated near the ſouth-end of Negropont; and its principal commerce conſiſts in ſilk, which is not of the beſt quality, being only fit for making tapeſtry; but it might be brought to ſome perfection, ſo as to be employed in ſtuffs, ribbons, and ſewing ſilk.

About 1000 lb. are gathered of it yearly; which, one year with another, are ſold for three half crowns *per* pound.

The other commodities are inſignificant; the wine, oil, barley, and corn produced there being ſcarce ſufficient for the conſumption of the inhabitants.

Black mulberries and ſtrawberries ſerve there for making a good kind of brandy.

The French keep a conſul at Andros.

Antiparos, is a ſmall iſland, which has ſome trade in wine and cotton.

Candia, formerly called *Crete*, is a large iſland of the Mediterranean, ſituated at the entrance of the Archipelago, between 22 and 27 deg. of E. lon. and between 35 and 36 deg. of N. lat. Its commerce is pretty conſiderable, and moſt of the Chriſtian nations trading to the Levant keep conſuls there; the towns of greateſt trade in the iſland being Canea, Retimo, Candia, and Gira-Petra.

The iſland is covered with an infinite number of olive-trees, producing good oil, which makes the principal traffic of the iſland.

The beſt oils of the iſland are thoſe of Canea, and Retimo; thoſe of Gira-Petra being black and muddy, becauſe, before the emptying of their jars, the inhabitants of this laſt place are accuſtomed to ſtir up the oil, and the lees with a ſtick, to ſell all together.

From Candia are alſo exported conſiderable quantities of Malmſey wine; but that of Retimo is moſt eſteemed.

The

The other merchandiſe brought from the iſland of Candia are gum adraganth, ladanum, wool, ſilk, honey, wax, cheeſe, and cotton. Some excellent wheat alſo grows in the iſland, particularly in the neighbourhood of Candia; but its exportation is prohibited.

Chios, *Xio*, or *Scio*, is an iſland called by the Turks *Salzizadaci*, or *Sachezada*, that is, the iſland of maſtic; being one of the largeſt and moſt populous of the Egean ſea, for it is 100 miles in circumference; and it is computed that there are 10,000 Turks, 3000 Latins, and 100,000 Greeks, in this iſland.

Chios, the capital of the iſland, is ſituated in 27 deg. of E. lon. and 38 deg. of N. lat. the port being the rendezvous of the Turkiſh ſhipping, going out and returning home to Conſtantinople.

Wine, butter, ſilk, cotton, turpentine, and maſtic, are the principal productions for the European trade; and it is computed that to the amount of about 25,000 l. ſterling, are yearly exported in ſpun ſilk, beſides what is manufactured in the iſland in damasks, ſatins, and taffeties, ſent to Cairo, Conſtantinople, and all the towns of the coaſts of Barbary.

The cottons are in wool, or ſpun; of which fuſtians, and other ſtuffs, are made.

But the principal branch of trade in this iſland conſiſts in maſtic, which is found no where elſe. The beſt ſort is deſigned for the Grand Signior, or rather for the women of his ſeraglio; ſo that what the Europeans buy may be properly called the refuſe. See *Maſtic*.

The Turks and the French pay only a duty of 3 *per cent.* for all the merchandiſe of the iſland; but the Jews and Armenians pay five.

Leſbos, or *Metelin*, is an iſland ſituated in 26 deg. 30 min. of E. lon. and 38 deg. 30 min. of N. lat. 60 miles north-weſt of Smyrna; being 50 miles long, and 25 broad.

Caſtro, the antient Metelin, is the chief town; and there are upwards of 100 villages in the iſland, which produces good wheat, excellent oil, and the beſt figs of the Archipelago. It alſo affords great quantities of rich wine; as alſo fir-trees, of which planks and maſts are made, that ſell very well in all parts of the Levant.

Milo, or *Melo*, is 60 miles north of Candia; having a pretty conſiderable trade in wine, oil, ſalt, ſulphur, alum, cotton, coloquintida, and all ſorts of legumes. The ſalt is an exceeding cheap article; and the ſulphur is found in large pieces in the earth, particularly in large veins in the quarries from whence millſtones are taken; being very beautiful, with a greeniſh and gloſſy hue.

The cotton is very good, and ſells well.

There is alſo a prodigious ſale of millſtones in this iſland, which furniſhes all the other iſlands of the Egean ſea, as alſo Conſtantinople, Cyprus, and a great part of Egypt with them; the quarries of theſe ſtones being ſo abundant, that the Grand Signior has from them a yearly revenue of 2500 l. ſterling.

It is this iſland which gives pilots to the greater part of the ſhips that ſail in this part of the Mediterranean, no others being ſo well acquainted with the Archipelago.

Micona, in the Frank language *Miconi*, has an excellent port, and its territory produces ſeveral mercantile commodities. It has about 500 ſeamen, which paſs for the beſt of the Archipelago, not excepting thoſe of Milo; with upwards of 100 ſhips for the trade of the iſlands, and 40 or 50 large galley-boats for that of Turky and the Morea.

The commerce to Turky is in leather, particularly in Morocco and Cordovans, which are laden at Siagi near Smyrna, and at Scala Nova. The commerce of the Morea conſiſts chiefly in wine; of which the inhabitants of Micona make, one year with another, from 25 to 30,000 barrels, and each galley-boat may carry 7 or 800 barrels.

The Engliſh, Dutch, and French keep conſuls in this iſland; but the two former not ſo much for any ſhips they ſend there, as to protect the trade of the Greeks.

The French ſhips deſtined for Smyrna and Conſtantinople, paſs always into the ſtrait of Tina and Micona; and, beſides the ſhips which almoſt always touch at Micona, ſeveral barks reſort it from France, which load there corn, ſilk, cotton, and other merchandiſe of the neighbouring iſlands.

Naxia, or *Nixia*, is an iſland, ſituated in 26 deg. of E. lon. and 36 deg. 30 min. of N. lat. lying S. E. of Micona, and E. of Paros. It is 100 miles in circumference, the country fruitful, and well watered, with woods, hills, and valleys, agreeably intermixed.

The greateſt part of the inhabitants are Greek Chriſtians, and the reſt Latins, each of them having their archbiſhop; and the Turks ſuffer them to be governed by their own magiſtrates.

The iſland has a good trade in barley, wine, figs, cotton, ſilk, oxen, ſheep, mules, emery, and oil.

Ladanum is alſo found there, but full of filth and goats hair. Oil of olives is ſold there very cheap, 8 oaks, of 2 lb. 11 oz. avoirdupois each, coſting but a crown; and ſalt is ſo cheap, that 12 or 15 meaſures, each meaſure weighing 120 lb. are ſold for about 4 s. 6 d. ſterling.

Emery is found in ſeveral parts of the iſland, by thoſe who till the ground. The Engliſh ballaſt their ſhips with it; and it uſually coſts them about 5 s. for 20 quintals, each weighing 140 lb. avoirdupois.

The marble of Naxia is alſo much eſteemed; and the French keep a conſul upon the iſland.

Paros, is an iſland ſituated in 25 deg. 30 min. of E. lon. and 36 deg. 30 min. of N. lat. almoſt in the mid-way between the Morea and the Leſſer Aſia. It was formerly very famous for its white marble, which ſculptors preferred to all others for ſtatues; and it is thought that it was of this marble moſt of the antique ſtatues were made, which have been preſerved till our times. But modern ſculptors think that the Italian marble is preferable to that of Greece, which is of a coarſer grain, and eaſily flaws in the working; whereas the other is ſofter, and ſeems to obey the chizzel.

The commerce of Paros conſiſts in wheat, barley, legumes, wine, and in cotton cloths: it abounded much formerly in oil; but the Venetian army burnt almoſt all the olive-trees during the war of Candia.

Patmos, or *Patino*, is one of the leaſt of theſe iſlands; being ſituated in 27 deg. of E. lon. and 37 deg. of N. lat. It produces ſcarce any thing fit for commerce; the wheat, barley, and figs, that grow there not being ſufficient for the inhabitants; but it has a commodious harbour, and twelve galley-boats, with ſeveral other ſmaller veſſels, which the inhabitants uſe for bringing corn from the Morea, and even as far as the coaſts of the Black ſea, for the loading of French ſhips; and the French keep a vice conſul in this iſland.

Policandro, is a ſmall iſland, being dry and rocky; ſo that the inhabitants are very poor, and trade but little, gathering wine and oil only for their own conſumption. However, they have ſome trade in cotton-cloths for napkins, a dozen of which are ſold for a crown; but they are not above a foot ſquare.

Rhodes, is the moſt conſiderable iſland in the Mediterranean, next to Candia and Cyprus; being ſituated between the 36th and 37th degree of N. lat. about 60 miles N. E. of the iſland of Candia, 250 to the W. of Cyprus, and not more than 20 S. W. of the continent of Aſia Minor. It is about 50 miles in length from N. to S. and half as much in breadth, or rather leſs.

The city of Rhodes is ſituated on the N. E. part of the iſland; having a tolerable good harbour, or, as ſome ſay, three harbours, though two of them will receive only very ſmall veſſels: the city ſtands part of it on the riſing of a hill, and is three miles in circumference,

The Rhodians ſo improved the advantage of their ſituation, that they became the moſt conſiderable maritime power in the Mediterranean, and preſcribed laws for the regulation of navigation and commerce, afterwards called the Rhodian laws; by which maritime cauſes were decided in all the provinces of the Roman empire.

Samos, is an iſland, ſituated in 27 deg. 30 min. of E. lon. and 37 deg. 30 min. of N. lat. 30 miles S. of Smyrna, and inhabited by about 12,000 Greek Chriſtians. A conſiderable trade is carried on at Samos, where the cuſtom-

houſe is farmed only at 10 000 crowns; but the Aga, who collects the duties, gets as much more for himſelf.
Muſcadine grapes are the fineſt and beſt fruit of the iſland; but the wine made of them is not of the moſt excellent kind; which is thought to proceed from the bad manner of making it; though what is ſent to the Europeans eſtabliſhed at Smyrna, is uſually pretty good; becauſe more care is taken of it, and it is leſs adulterated with water than that which is uſed among the Greeks. About 3000 barrels are annually made, each barrel weighing about 158 lb. avoirdupois.
Such Greeks as purchaſe the wine in the iſland pay 4 or 5 *per cent.* duty of exportation, according to the will of the cuſtomhouſe-officer: but the French pay only the half; and the greater part of theſe wines are brought to Chios, Rhodes, and Napoli di Romania.
The oil of Samos is tolerably good; but there are not above 8 or 900 barrels gathered in a year, which weigh as much as the barrels of wine, and 1139 lb. of it are ſold for a crown. The Greeks pay 4 *per cent.* duty of exportation for this commodity, but the French only two.
In this iſland there are uſually laden three barks of wheat every year for France; each bark containing 8 or 900 meaſures, and each meaſure making 75 lb.
They dry figs at Samos, but only for the uſe of the country; which are very white, and three or four times larger than thoſe of Marſeilles, but leſs delicate.
Though the cheeſe of Samos is not of the beſt kind; yet a bark is laden therewith every year for France, and 100 lb. coſt about 9 s. ſterling.
This iſland may alſo furniſh to the amount of 400 quintals of peas, worth a crown *per* quintal, which pay 4 *per cent.* duty of exportation.
Laſtly, it has ſome ſilk, honey, wax, ſcammony, wool, different boles, and emery.
The ſilk is very beautiful, and is ſold for about 4 s. ſterling the pound. The trade thereof amounts to about 6000 l. ſterling a year, and the commodity pays 4 *per cent.* duty of exportation.
The honey is excellent, and 50 lb. of it ſold for 4 s. 10 d. ſterling; the wax is about 5 d. ſterling the pound, and ſcarce more than 100 quintals of it are gathered in the whole iſland.
The ſcammony is not very good, being reddiſh, hard, and tough, therefore with ſome difficulty reduced to powder. It purges too violently, and is conſumed moſtly in Natolia; being ſcarce ever ſent into the Weſt, though it pays no duties.
The French load there a bark with wool every year, giving about 2 d. ſterling for 3 lb. 2 oz.
Among the boles, that of the neighbourhood of Barvonda is in moſt eſteem; being a kind of natural Mars ſaffron, of a deep red, very fine, and dry.
Oker is very common in the iſland, and makes a pretty beautiful yellow when ſlightly tinged in the fire; but becomes of a red brown, when left there for any time.
Near Carlovaſſi is found another kind of bole, very black, and very fine; which is uſed for dying black thread for ſewing.

Santorini, is an iſland ſituated in 25 deg. 35 min. of E. lon. and 36 deg. 20 min. of N. lat. being 35 miles in circumference; but is properly a large rock of pumice-ſtone; though its inhabitants, who are about 10,000 Greeks, are very laborious, and great lovers of trade; ſending their barley, wine, cotton, and linen, to the neighbouring iſlands.
The wines have the colour of Rheniſh; but are violent, and full of ſpirits.
The cotton is dreſſed there like the vine, and the plant which produces it riſes in form of a ſhrub, much like gooſeberry-trees; however, it is the ſame ſpecies which botaniſts call cotton-herb, and which they diſtinguiſh from the ſhrub.
The linens are chiefly manufactured by the Latin and Greek nuns; being ſent to Candia, the Morea, and throughout all parts of ths Archipelago.

Sikino, has ſome trade in corn, which paſſes for the beſt in the Archipelago. The French tartanes of Provence take away with them great quantities; though the Turks are not willing that their corn ſhould be taken from them, and very often they place it among contraband merchandiſe for exportation; but, for a little money, the officers ſhut their eyes, and their cargoes are completed in the night-time.
The other commodities of Sikino are wine and ſome cottons; as alſo figs, which are excellent when freſh, but not ſo when dry, becauſe they are heated in an oven to keep them from worms.
The French have a conſul upon this iſland.

Siphanto, is about 6 miles from Milo; and the commodities brought from it are oil, capers, ſilk, cotton-cloths, figs, honey, and wax.
The iſland alſo produces cotton in great quantities; but it is entirely conſumed in their own manufactures.
The cloths are of two ſorts; the ſhamite, which is entirely plain; and the dimity, which is croſſed; but the latter is the more beautiful, and ſells beſt.
The ſilk is good, but in no great quantity.

Skiros, has ſome trade in wheat, barley, wine, and wax.
The French load ſome barks with barley and wheat; the wines are ſent to the neighbouring iſlands, and are ſold for about a crown a barrel; 100 quintals are annually gathered of wax; and it has alſo excellent cheeſe.

Syra, has ſome excellent wheat, but in no great quantity; a great deal of barley, and wine, with figs, olives, and cotton.

Thermia, has a trade in ſilk, worth about 4 s. 6 d. ſterling the pound, and ſometimes 1200 lb. are gathered in a year.
It has alſo wine, honey, wax, wool, and cotton; of which laſt ſeveral cloths are made, particularly a kind of very pretty yellow gauze, with which the women of this iſland make veils for the covering of their heads.
The French keep a conſul in this iſland.

Zia, has wheat, barley, wine, figs, and ſilk.
The ſilks of Zia are of a pretty good quality; and ſome authors aſſert, that ſilk ſtuffs were firſt invented in this iſland; though M. Tournefort, in his travels of the Levant, pretends that it is eaſy to demonſtrate that the invention is due to the inhabitants of the iſland of Cos.

Turky being thus happily ſituated in the centre of the continent, and the moſt fruitful countries, could not fail of engroſſing a conſiderable ſhare of trade, if the people were not ſo inactive and indolent, or the government not ſo arbitrary. The Grand Signior, or Emperor of the Turks, is abſolute, and his throne hereditary; at leaſt, it is confined to one family; for though the janiſſaries, who are his guards, frequently depoſe their ſovereign, when he happens to be unſucceſsful, or his adminiſtration does not pleaſe them, they uſually advance his neareſt relation to the throne.
The Grand Signior exerciſes an unlimited authority over the inhabitants of the ſeraglio, and his baſhaws, and officers, as well as over his Chriſtian ſubjects; but the Turkiſh gentlemen, who have no places or dependence at court, enjoy their liberties and properties as much as if they lived under a limited monarchy, for they pay no taxes to the government; and if the Grand Signior was to attempt to tax them, or change their cuſtoms, he would run the hazard of being depoſed.
The great officers of ſtate are the grand vizir, or prime miniſter; the mufti, or high-prieſt; the vizirs of the bench, who ſit in the divans, or courts of juſtice; the caddoliſquiers, or chief juſtices of provinces; the beglerbegs, or vice-roys; the baſhaws, or baſſas, who are governors of towns and diſtricts, under the beglerbegs; the kaimachan, or governor of Conſtantinople, who is lieutenant to the grand vizir in his abſence; the treaſurer; the chamberlain, and others officers of the houſhold; the aga, or general of the janiſſaries; and the captain-baſhaw, or high-admiral.
There are no nobility or hereditary governments in Turky; for the baſhaws, and great officers of ſtate, are all educated in the ſeraglio; being the children of Chriſtian parents, taken by the Tartars in their excurſions, or purchaſed by the merchants, many of whom deal only in

this kind of traffic. However, the renegado Chriſtians ſometimes arrive at the higheſt employments in their fleets and armies; being better skilled in the arts of war and navigation than the Turks uſually are: but, as for the native Turks, few of them are found in any great poſts; it being of the children of Chriſtians, or renegadoes, that their officers, both civil and military, are compoſed, as well as the beſt part of their forces.

The Turkiſh forces are very numerous; but the greateſt part of them conſiſt of a kind of militia; becauſe every gentleman holds his lands by military tenures, and is obliged to bring a certain number of ſoldiers into the field, in proportion to the eſtate he poſſeſſes. However, they chiefly rely on their regular ſtanding troops; which conſiſts of ſpahics and janiſaries; the former being the horſe-guards, conſiſting of about 15,000 men; and the latter are the foot-guards, conſiſting of about 20,000; who are educated in the ſeraglio, and trained up to arms from their infancy; though there are about 100,000 more, who procure themſelves to be regiſtered in this body, to enjoy the privileges of janiſaries, which are very great; being ſubject to no juriſdiction but that of their aga, or chief commander.

Their naval forces are not ſo conſiderable as might be expected in ſuch extenſive dominions, ſituated on ſeveral ſeas, and abounding in commodious harbours: but their neglecting navigation and foreign commerce, is the true reaſon why they can never find ſailors to man a great fleet, if they ſhould build one.

The Turks ſeldom ſail to diſtant countries, or viſit nations of a different faith: but the merchandiſe of the reſt of the world is carried to them in foreign bottoms; and the produce and manufactures of Turky are exported in the ſame manner. They reap little advantage by their commerce with Chriſtendom, but what they get by the duties of import and export; their home trade being carried on chiefly by their Chriſtian or Jewiſh ſubjects: for the Turks are above applying themſelves to any thing of this kind; leaving traffic, and mechanical employments, to be managed by the deſpiſed Chriſtians, who contribute much more, by their labour and induſtry, to the ſupport of that empire, than the Turks themſelves, which may be one reaſon that their government indulges them in the free exerciſe of their religion. Indeed, there ſeem to be more Chriſtians in the Turkiſh empire than Mahometans, eſpecially in their European territories; who have alſo this happineſs, that they are never preſſed or forced into their armies, but left to follow their ſeveral occupations; while the Turkiſh gentlemen take the honour of defending their country, and making foreign conqueſts, entirely on themſelves.

The eſtabliſhed religion is the Mahometan, of the ſect of Omar, and ſubdivided into 100 other ſects: but all religions are tolerated in Turky, where the Greek Chriſtians have 4 patriarchs, 19 archbiſhops, and 33 biſhops, who are allowed churches for the celebration of divine worſhip.

The revenues of the Grand Signior ariſe by the cuſtoms, the produce of the demeſne lands, and a kind of capitation-tax, impoſed on every ſubject of the empire, who is not of the Mahometan religion. Another branch of them ariſes by the annual tribute paid by the Crim Tartar, the princes of Moldavia and Walachia, the little republic of Raguſa, and part of Mingrelia; beſides half a million of money, out of a million and a half which is levied annually in Egypt, comes into the royal treaſury, the reſt being laid out in paying the forces of that province. But all theſe are a trifle, in compariſon of the great ſums which the Sultan continually extorts from his viceroys and great officers of ſtate, which paſs under the name of preſents: he is alſo heir to all his officers and miniſters; who, after plundering whole provinces, are obliged to leave all to the diſpoſal of their ſovereign when they die; though, if they happen to be immoderately rich, he ſometimes cuts them off in the prime of life, under pretence of miſconduct.

The Turks are of a Scythian or Tartarian original; being little known till the eighth century, when they came down upon Georgia, and plundered that country. In 844, they ſettled in Armenia Major: in the year 1000, the Turks, under Tangropilix, defeated the Perſian Sultan, took poſſeſſion of his country, and afterwards made a conſiderable progreſs in Leſſer Aſia; but, in 1100, another ſwarm of Scythians broke into Perſia, and reduced the Turks to a very low ebb: but Ottoman reſtored the Turkiſh nation to their former grandeur, making himſelf maſter of the beſt part of Aſia Minor; on which account the empire obtained the name of Ottoman, and the preſent Grand Signior deduces his pedigree from this prince. The ſucceeding princes extended their poſſeſſion; and Mahomet II. ſirnamed the Great, conquered the two empires of Conſtantinople and Trebiſond in 1453 and 1460, with 200 cities more, and was firſt ſtiled Emperor of the Turks; after which they extended their arms, and have been long very formidable to the European powers: but the Turkiſh empire ſeems now to be be in the decline; while the empire of Ruſſia is every day increaſing in ſtrength, ſo as to be a ſufficient check to any future attempts of the Turks againſt the Chriſtian powers.

Engliſh TURKY *company.* In 1739 and 1740, the Turky company preſented two memorials to the ſecretary of ſtate, repreſenting, that the French imported at Conſtantinople and Aleppo about 12,000 cloths yearly, about 40 yards each; and at each of theſe places there had been for ſeveral years paſt large quantities of Engliſh cloth unſold, occaſioned by ſo large an importation of French cloth; particularly in February 1739, about 5000 Engliſh cloths remained at Scanderoon, above 4000 at Conſtantinople, and at Smyrna above 3000. They alſo repreſented, that the French had obtained ſome advantages from the Porte; firſt, a reduction of their cuſtom upon cloth, from 40 to 30 dollars the bale of 20 pieces; ſecondly, a total abolition of the duty called meſſataria, which is two dollars, and 1-6th of a dollar, *per* bale of cloth, and one-half *per cent. ad valorem* upon all goods ſold by weight. Whereupon they obſerved, that thoſe advantages obtained by the French in Turky, with the great encouragement given them by their government, encreaſed their apprehenſions of not being able to cope with them in the cloth-trade, without aſſiſtance from the Britiſh government.

Theſe papers being laid before the commiſſioners of the board of trade, they reported to the lords juſtices, that the company was under great diſadvantages on account of the French trade to Turky. That it was at a very high expence, to the amount of 8000 l. a year, in maintaining the ambaſſador his Majeſty ſends to the Porte, as well as conſuls, and other public officers in that country, which, in the preſent low condition of their trade, they were not able to ſupport. That the company apprehended, if a bounty was to be allowed on the exportation of cloth to the Levant, which might include Spain and Italy, and the duty on Turky ſilks and grograms lowered, it might be a means not only of relieving them in their preſent difficulties, but might enable them to continue the expence of the public miniſters at the Porte, and to carry on this valuable branch of trade to advantage; whereas it laboured under a large debt, contracted by the company, which they had no hope of paying, while it continued in this drooping condition. But the commiſſioners obſerved, that they very much queſtioned whether the expedients the company propoſed were practicable; as alſo, that having aſked the merchants, whether it would not be for their ſervice, that his Majeſty's ambaſſador at the Porte ſhould be inſtructed to apply for the obtaining all the advantages granted to any other nation? they ſeemed to decline it, on account of the increaſe of expence ſuch application muſt be attended with.

The Engliſh commerce has been long declining in Turky, while the French have greatly advanced in this trade; which occaſioned ſome propoſals for the opening of this branch of commerce to the whole Britiſh nation: but the legiſlature thought proper to try another expedient for the revival of this ſinking branch of commerce, by paſſing an act of parliament for a new regulation of the Turky company.

The

The woollen cloths of England were better made, and cheaper, than thoſe of France; which made them in more eſteem among the Turks, to whom the Engliſh alſo carried great quantities of tin, lead, iron, pewter, logwood, pepper, dry fiſh, ſugar, watches, toys, and gold and ſilver: but this does not ſeem to be ſo much the caſe at preſent as it was formerly; though the Turky trade may always be extremely beneficial to Great Britain.

The woollen manufacture has at all times been thought the greateſt baſis of the foreign trade of England; being the firſt ſpring of its dealings abroad, and is what, by its conſumption at home, as well as exportation, gives the greateſt employment to the poor of the nation; for, in a great meaſure, it has been the foundation of the employment the people have had for ſeveral years in the ſilken manufacture; and a trade for ſilk, in exchange for the woollen manufactures of Great Britain, might be ſo happily ſettled, that one might promote the exports and vent of the other. It may be ſafely advanced, that the whole price of the encreaſe of the ſilken manufacture in England, from the worm to the mercer's ſhop, is paid to the product of the lands of England, and the labour of its people; admitting its manufacture, and native product, are only given in exchange for the raw and thrown ſilks imported from Turky, Italy, and the Eaſt Indies: therefore the Turky trade ſhould be diligently attended to, honeſtly conducted, and worthily promoted.

This company was eſtabliſhed upon the footing of the company of Engliſh merchant-adventurers; that is, it had no general fund, wherein the proprietors depoſited their ſhares, to carry on commerce; but the trade was ſo far free, that each aſſociate carried it on upon his own account; obſerving the regulations made by the company, and contributing occaſionally ſome ſums, for the expences and common intereſt of the trade.

This aſſociaiion commenced in the reign of Queen Elizabeth; which rendered the Engliſh commerce very flouriſhing in all the ſea-port towns of the Levant, eſpecially at Smyrna and Conſtantinople; though of late it has declined.

James I. confirmed the original charter in 1626, and added to it ſeveral new privileges.

The troubles of England under Cromwel hurt ſeveral perſons in the government of this company, and introduced among the members a great number of perſons who had not the qualifications ſpecified by the charters of Elizabeth and James I. or who behaved not purſuant to the antient regulations; therefore Charles II. upon his reſtoration, took upon him to re-eſtabliſh this company in its primitive reputation, by granting another charter of the 2d of April 1662, which confirmed that of James I. and added ſeveral new articles.

The number of merchants to compoſe the company was not determined; all thoſe poſſeſſed of neceſſary qualifications being permitted to be members; yet there were ſeldom leſs than 300.

One of the beſt and moſt uſeful regulations of this company was, not to allow the conſuls, nor even the ambaſſador, to lay any impoſt on the veſſels and goods, under the pretext of Turkiſh extortion, or any other extraordinary expences: for, to avoid this diſorder, ſo often deſtructive to the commerce of other nations, the Engliſh company not only allowed penſions to the ambaſſador and conſuls; but alſo to their principal officers, ſuch as the chaplain, the ſecretary, the interpreters, and the janiſaries; becauſe that theſe officers, upon no pretext whatſoever, might impoſe no new ſum upon merchants, ſhips, or goods.

The commerce carried on by the members of this company, employs yearly between 20 and 25 ſhips, of 25 or 30 guns each.

The merchandiſes exported for the Levant are woollen cloths of all colours, ſerges, tin, lead, pepper, cochineal, and a great quantity of ſilver, which the ſhipping ſometimes take in as they paſs by Cadiz.

The returns are in raw ſilks, galls, ſpun goats-hair, wool, cottons, Morocco leather, pot-aſhes, ſoap, ſeveral kinds of gums and medicinal drugs.

It was formerly thought, that the trade of this company at Smyrna, Conſtantinople, and Scanderoon, was almoſt equal to that of the Indies; and that even, in ſome reſpects, it was more to the advantage of England, becauſe it conſumed more Engliſh manufactures than the other, which are almoſt all paid for in ready money.

The parts reſerved for the company's commerce, are the ſtates of Venice, the ſtate of Raguſa, all the ſtates of the Grand Signior, and all the port-towns of the Levant and Mediterranean, except the ports upon the coaſts of France, Spain, and Italy.

The penalty enacted againſt thoſe not members of the company, detected in carrying on a trade within the extent of its conceſſion, was 20 *per cent.* of the value of the merchandiſes with which they were laden.

But ſeveral complaints being made againſt this company, an act of parliament was made in the 26th year of King George II. entitled, "An act for regulating the trade into "the Levant ſeas;" which is as follows.

Whereas King James I. by his letters-patent, bearing date the 14th day of December, in the third year of his reign, did grant to ſeveral perſons therein named, and to their ſons, and ſuch other as ſhould then after be admitted, or made free, that they ſhould be one fellowſhip, and one body corporate or politic, by the name of The governor and company of merchants of England trading into the Levant ſeas; and, by the ſame name, ſhould have perpetual ſucceſſion; and did direct, that all perſons, ſubjects of the realm, being mere merchants, which then were, or after the date of the ſaid letters-patent, ſhould happen to be under the age of 26 years, or not out of his or their apprenticeſhips, ſhould be admitted into the freedom of the ſaid company, if he or they ſhould demand the ſame within one year next after he or they ſhould attain the age of 26 years, or within one year after the end of his or their apprenticeſhips, and ſhould offer and pay to the ſaid governor and company, for his or their admittance, the ſum of 25 l.; and did further direct, that all perſons, ſubjects of this realm of England, being mere merchants, above the age of 26 years, ſhould be admitted into the freedom of the ſaid company, upon paying a fine of 50 l.; and did alſo direct, that all and every the ſons of ſuch as were, or ſhould be free of the ſaid company, and alſo all their apprentices employed in that trade for the ſpace of three years, or upwards, within the limits of the ſaid letters-patent, ſhould, after the end of their apprenticeſhips, be admitted to the freedom of the ſaid company, on payment of the ſum of 20 s. only. And whereas King Charles II. by his letters-patent, bearing date the 2d day of April, in the 13th year of his reign, did ratify and confirm the ſaid letters patent of King James I.; and did further direct, that no perſon reſiding within 20 miles of the city of London, ſhould be admitted into the freedom of the ſaid company, or have any benefit of the privileges thereof, unleſs he be made free of the ſaid city. And whereas the trade into the Levant ſeas has very much decreaſed, and the taking of leſs fines for the admiſſion of perſons into the freedom of the ſaid company, and the not reſtraining the freedom thereof to mere merchants, and to ſuch perſons as, reſiding within 20 miles of the city of London, are free of the ſaid city; and the ſecuring to all perſons admitted into the ſaid company, the liberty of exporting, at all times hereafter, all ſorts of goods and merchandiſes, not prohibited by law to be exported, to any port or place within the limits of the ſaid letters-patent, from what parts of Great Britain, and at what time, and in what quantity, and on board what ſhips, navigated according to law, they ſhall reſpectively think proper; and alſo of importing, in the like manner, from any port or place within the limits of the ſaid letters-patent, raw ſilk, or any other goods or commodities purchaſed within the ſaid limits, not prohibited by law to be imported, are the moſt probable means of recovering and extending the ſaid trade, for the benefit of this nation: it was therefore enacted, that from and after the 24th day of June 1754, every ſubject of Great Britain, deſiring admiſſion into the ſaid company of merchants

chants of England trading into the Levant ſeas, commonly called or known by the name of the Turky company, ſhall, upon requeſt for that purpoſe, made by himſelf, or any other perſon in his behalf, to the governor, or deputy-governor, of the ſaid company for the time being, be admitted into the ſaid company, within the ſpace of 30 days after ſuch requeſt ſhall be made, and ſhall have, uſe, and enjoy all the liberties, privileges, juriſdictions, franchiſes, power, and authorities, granted to the ſaid company by the ſaid letters-patent, as largely, fully, and amply, to all intents, conſtructions, and purpoſes, as any member of the ſaid company could, can, or may have, uſe, and enjoy the ſame, by virtue of the ſaid letters-patent; ſuch ſubject paying or tendering, or cauſing to be paid or tendered, for ſuch his admiſſion, for the uſe of the ſaid company, the ſum of 20l. and no more; any thing in the ſaid letters-patent, or either of them, to the contrary in any wiſe notwithſtanding.

That from and after the 24th day of June 1754, the following oath, in lieu of the oath heretofore taken by perſons, upon their admiſſions to their freedom in the ſaid company, ſhall be taken by every perſon, upon his admiſſion to his freedom, either before the governor or deputy-governor of the ſaid company, or before two of his Majeſty's juſtices of the peace, who are hereby reſpectively impowered and required to adminiſter the ſaid oath; which juſtices are hereby required to certify, under their hands and ſeals, that the ſaid oath was taken by on the day of before us, two of his Majeſty's juſtices of the peace in and for

—— "You ſwear to be good, faithful, and true, to "our ſovereign lord King George, his heirs and ſucceſ-"ſors; you ſhall be obedient and aſſiſtant to the gover-"nor, his deputy, and aſſiſtants, of the company of "merchants of England trading into the Levant ſeas, in "all lawful matters; you ſhall truly hold and keep to your "power, having no ſingular regard to yourſelf, to the "hurt and prejudice of the common weal of the ſaid "company, all ſtatutes, acts, and ordinances, which "according to have been duly made, the grant of privi-"leges granted to the ſaid company, and conſiſtent with "an act of parliament made in the 26th year of the "reign of King George II. entitled, An act for enlarging "and regulating the trade into the Levant ſeas; the ſe-"crets of the ſaid company you ſhall not diſcloſe; and, "if you ſhall know any perſon or perſons that intend "any hurt, harm, or prejudice, to our aforeſaid ſove-"reign lord the King's Majeſty, his heirs or ſucceſſors, "or to the ſaid company, or the privileges of the ſaid "company, you ſhall give knowledge thereof to the "ſaid governor, deputy, or aſſiſtants, or to ſome of "them; and you ſhall not colour or free any goods be-"longing to any one not free of the ſaid company. So "help you God."

That from and after the ſaid 24th day of June 1754, it ſhall and may be lawful to and for all and every perſon and perſons, being free of the ſaid company as aforeſaid, ſeparately or jointly, to export, or cauſe to be exported, from any port or place in Great Britain, to any port or place within the limits of the ſaid letters-patent, in any Britiſh or plantations-built ſhips, navigated according to law, at any time, and to any perſon or perſons whatſoever, being freemen of the ſaid company, or ſons or apprentices of freemen, ſuch freemen ſons or apprentices being his Majeſty's Chriſtian ſubjects, ſo long as ſuch perſon or perſons ſhall remain under, and ſubmit to, the protection and direction of the Britiſh ambaſſador and conſuls reſpectively, for the time being, any goods, wares, or merchandiſes whatſoever, not prohibited by law to be exported; and alſo to import, in like manner, from any port or place within the limits of the ſaid letters-patent, raw ſilk, or any other goods, wares, or commodities, purchaſed within the ſaid limits, not prohibited by law to be imported, upon paying or ſecuring the cuſtoms, and other duties payable for the ſame, to his Majeſty, his heirs and ſucceſſors, by virtue of any law now in force, or hereafter to be made; and, upon paying ſuch impoſitions or ſums of money as ſhall be aſſeſſed and charged upon all goods, wares, or merchandiſes, to be exported or imported as aforeſaid, or upon any ſhips laden with the ſame, for defraying the neceſſary expences of the ſaid company; any thing in the ſaid letters patent, or either of them, or any ordinance, conſtitution, or bye-law of the ſaid company, made, or to be made, to the contrary in any wiſe notwithſtanding.

Provided always, that the exportation of gold or ſilver, either in foreign coin or bullion, ſhall remain ſubject to the bye-laws of the ſaid company, made or to be made in that behalf.

That it ſhall and may be lawful for the ſaid governor, or deputy-governor, and company, in general court aſſembled, to make ſuch rules, ordinances, or bye-laws, for the good government of the ſaid company, as the major part of the members preſent at ſuch general court ſhall think neceſſary; but no ſuch rule, ordinance, or bye-law, ſhall be valid, or of any force or effect whatſoever, unleſs the ſame be confirmed at a ſubſequent general court, to be held at leaſt one calendar month after the general court at which ſuch rule, ordinance, or bye-law, was made; and if any ſeven, or more, of the freemen of the ſaid company, ſhall think themſelves aggrieved by any rule, ordinance, or bye-law, made, or to be made, it ſhall be lawful for them to preſent an appeal, in writing, againſt the ſame, to the commiſſioners for trade and plantations, who are hereby empowered and required, with all convenient ſpeed, to hear ſuch appeal, and to approve or diſapprove ſuch rule, ordinance, or bye-law, and in ſuch manner as to them, or the major part of them preſent, ſhall appear fit and reaſonable.

Provided alſo, that in caſe any ſuch appeal ſhall be brought againſt any future rule, ordinance, or bye-law, to be made by the ſaid governor and company, ſuch appeal ſhall be brought within twelve calendar months after ſuch rule, ordinance, or bye-law, ſhall be ſo made and confirmed as aforeſaid; and if any ſuch appeal ſhall be brought againſt any rule, ordinance, or bye-law of the ſaid company now in force, ſuch appeal ſhall be brought within twelve calendar months after the ſaid 24th day of June 1754.

Provided alſo, that the perſons appealing againſt any ſuch rule, ordinance, or bye-law, ſhall, at the ſame time, give notice in writing of ſuch appeal, to the governor, deputy-governor, or ſecretary of the ſaid company for the time being.

Provided nevertheleſs, that no ſuch rule, ordinance, or bye law, ſhall be of any greater or other force or validity, than the ſame would or ought to have been if no ſuch appeal had been given by this act.

Provided always, that whenſoever any general court of the ſaid company ſhall be appointed to be held for the making of any rule, ordinance, or bye-law, public notice thereof ſhall be given in the London Gazette, at leaſt 20 days before the time appointed for the holding of ſuch general court.

Provided always, that all rules, orders, and regulations made for preventing infection, ſhall be and remain in full force and virtue, as if this act had never paſſed.

That no goods or merchandiſes liable to retain the infection of the plague, and coming from the Levant, without a clean bill of health, ſhall be landed in any part of Great Britain or Ireland, or of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, unleſs it ſhall appear to the ſatisfaction of his Majeſty, his heirs or ſucceſſors, or of his or their privy council, that the ſaid goods or merchandiſes have been ſufficiently opened and aired in the lazaretto of Malta, Ancona, Venice, Meſſina, Leghorn, Genoa, and Marſeilles, or one of them.

Dutch TURKY, or *Levant company*. There is properly no Dutch Turky company; but their commerce there is ſo conſiderable, and of ſuch importance to the republic, that the States-General thought it not unworthy of them to take it under their conſideration, and eſtabliſh ſome regulations, which all the Dutch traders are obliged to obſerve.

For the better obſerving theſe regulations, the ſtates have eſtabliſhed at Amſterdam a chamber of direction, compoſed of ſix deputies and a clerk, all merchants; who,

under the authority of burgo-maſters, take care of every thing that regards the navigation and commerce of the Mediterranean, eſpecially that which they carry on, with equal profit and reputation, at Smyrna and Conſtantinople.

This company nominates the conſuls for the Levant ports; though ſuch nomination muſt be confirmed by the ſtates. The company alſo aſcertains the number and force of the neceſſary convoys, for the ſecurity of the navigation of merchant-veſſels; it adjuſts the differences of traders; and it has even a right, when neceſſary, to add new regulations, but not to have any force till confirmed by the ſtates.

French TURKY, or *Levant company*, was eſtabliſhed for the commerce of the ports of the Mediterranean, the coaſts and countries ſubject to the Grand Signior, and the coaſts of Barbary and Africa.

Before this company exiſted, ſeveral mercantile aſſociations, eſpecially at Marſeilles and Toulon, were entered upon for the Mediterranean trade; and ſome even obtained letters patent for theſe ſocieties: but the moſt conſiderable of all was this company; which was eſtabliſhed in 1670, compoſed of 20 opulent merchants of Paris, Lyons, and Marſeilles.

Beſides the privileges contained in the edict of its eſtabliſhment, the King, by a new arret, of the 18th of July the ſame year, added ſeveral others; as 10 livres for each piece of cloth ſent by the company to the Levant; an exemption of the duties of importation and exportation, upon the proviſions and ammunition of its ſhips; a loan from his Majeſty to the aſſociates of 200,000 livres, without intereſt, for ſix years; as alſo, that the company's loſſes ſhould be repaired out of that ſum; laſtly, ſeveral lucrative and honourable privileges for thoſe who had actions therein.

However, this company gradually loſt its credit and privileges; ſo that an arret of the council of ſtate, dated the 17th of November 1684, revoked the excluſive privilege granted it of ſelling ſena imported from Cairo; but at laſt its conceſſion expired, which was not renewed; and the Levant commerce remained free to all the traders of France; though under ſeveral excellent regulations, made at different times from 1669 to 1749.

Genoeſe TURKY, or *Levant company*. The Genoeſe, in the year 1645, intended to trade to the Levant under their own flag; and projected a company, which was not eſtabliſhed till 20 years after.

The traffic of pieces of 5 ſols had ſo well ſucceeded with the French, that the Genoeſe endeavoured to follow their example; which occaſioned the ruin of their trade, becauſe thoſe coined in Italy were either all ſpurious, or of a baſe alloy.

To ſucceed in this project, they formed a Levant company in 1664; the Marquis Durazzo, one of the chief parties concerned in this new company, being commiſſioned to negotiate it at the Porte, where he went *incognito* with Count Leſly, ambaſſador extraordinary from the emperor.

The Grand Vizir, who was irritated at that time againſt France, on account of the affront put upon him by the French in the battle of St. Gottard, and the paſſage of Raab, gave ſuch good encouragement to the Genoeſe, that the Marquis ſoon returned with two large Genoeſe ſhips, and appeared in public with the character of the Genoeſe ambaſſador.

As long as the Turks ſeemed to be enamoured of theſe pieces of 5 ſols, which ſerved not only as money, but alſo as an ornament for the Turkiſh and Greek women of the iſlands, the Genoeſe were ſomewhat proſperous in their affairs; but, upon the crying down of this money, which happened in 1670, the company was ſo far hurt, that it has been in a languiſhing condition ever ſince; a Genoeſe ſhip being ſcarcely ſeen in the port-towns of the Levant, though exerciſing a wretched kind of commerce.

Vienna TURKY *company*. This company commenced in 1719; its object being the commerce that might be carried on in the ſtates of the Grand Signior, by the Danube, and the maritime ports of Auſtria. The ſucceſs of its trade was ſo great, and ſo ſudden, that in 1721 it was in a condition to make a dividend of 8 *per cent.* for its actioniſts. The Emperor, to continue the protection he granted it by his firſt letters patent, and to augment its privileges, granted it new ones; whereby he permitted, among other privileges, the augmentation of its fund to 1500 actions or ſhares, and each action of the value of 1000 florins, or 87 l. 10 s. ſterling.

TURMERIC. A root, uſed by the dyers, to give a yellow colour.

This drug is yellow, both within and without ſide; very hard, as if petrified; and not unlike, in figure and ſize, to ginger. The leaves it produces are like thoſe of white hellebore; its flowers riſe in form of a ſpica or ear; and its fruit rough, like new cheſnuts. It is brought chiefly from the Eaſt Indies; though the iſland of Madagaſcar alſo affords it.

But it ſhould be choſe big, hard, reſinous, hard to break, and heavy.

Some people have miſtakenly imagined there was a native red turmeric; but their error was owing to this, that the yellow root, as it grows old, turns brown, and when pulveriſed reddiſh. It is much uſed by glovers to dye their gloves, and alſo by the founders to give a gold colour to braſs. The Indians uſe it to dye their rice, and other food, of a yellow colour; from whence ſome call it Indian ſaffron; but our dyers find it does not give ſo ſteady a yellow as the luteola or weld; though it is admirable to brighten and heighten the red colours dyed with cochineal or vermillion, as ſcarlets. See *Dying*.

TURMERIC, is alſo uſed in medicine, by way of decoction, infuſion, or powder, with other ingredients, in hypochondriac, leucophlegmatic, and cachectical conſtitutions; being alſo a ſpecific in the jaundice and dropſy.

TURNADO, or *Tornado*. A wind, which, on ſome coaſts, blows all night from the ſhore.

TURNER. An artificer, who turns or makes ſeveral curioſities, with a lathe, either in metal, bone, or wood. See *Turning*.

TURNERS *company of London*, was incorporated by letters-patent of the 2d of James I. dated the 12th of June 1604, by the name of The maſter, wardens, and commonalty of the art or myſtery de lez turners of London.

They are governed by a maſter, 2 wardens, and 24 aſſiſtants: with a livery of 144 members, whoſe fine upon admiſſion is 8 l. They tranſact their affairs in a convenient hall on College-hill, belonging to the company.

TURNESOL, or *Torneſol*. The ſun-flower, or heliotrope; which is ſaid to follow the motion of the ſun, and to turn ſtill towards it.

Some have imagined the ſun-flower of uſe in medicine; but its reputation that way is now out of eſteem. Its principal uſe is in dying; in order to which, its juice is inſpiſſated, and prepared with calx and urine, in blue cakes; uſed alſo with ſtarch inſtead of ſmalt.

The juice likewiſe furniſhes the colour, with which the people of Languedoc, and ſome other parts of France, where it grows, prepare what they call the *tournſol en drapeux*, or turneſol in rags; the proceſs of which is as follows. The ſummits or tops of the plants being gathered in the beginning of Auguſt, are ground in mills, not unlike our oil-mills; then being put up in bags, are ſqueezed out with preſſes. When this juice has been expoſed to the ſun about an hour, they dip linen rags therein, and hang them out in the air till they are well dried again; when, moiſtening them for ſome time, over the vapour of about 10 lb. weight of quick lime ſlaked in a ſufficient quantity of urine, they lay them out again for the ſun to dry; then to be again dipped in the juice of the ricinoides. When they are dried for the laſt time, they are in their perfection, and thus ſent into many parts of Europe, where they are uſed to tinge wines and other liquors, and give them an agreeable colour.

The Dutch prepare a kind of turneſol in paſtes, cakes, or ſtones, pretended to be the juice of that plant inſpiſſated; but

but there is reaſon to think it a cheat, and to be the juice of ſome other plant prepared after this manner, the turneſol being no plant of their growth.

TURNING. A branch of ſculpture; being the art of faſhioning hard bodies, as braſs, ivory, and wood, into a round or oval form in a lathe.

Turning is performed by putting the ſubſtance to be turned upon two points, as an axis, and moving it about on that axis; while an edge-tool, ſet ſteady to the outſide of the ſubſtance, in a circumvolution thereof, cuts off all the parts that lie farther off the axis, and makes the outſide of that ſubſtance concentric to the axis. The invention of turning appears to be very antient. Some, indeed, to do honour to the age, will have it brought to perfection by moderns; but if what Pliny, and ſome other antient authors relate, be true, that the antients turned thoſe precious vaſes, enriched with figures and ornaments *in relievo*, which we ſtill ſee in the cabinets of the curious, it muſt be owned, that all which has been added in theſe ages, makes but a poor amends for the manner of turning among the antients.

TURNPIKE. A gate ſet up acroſs the road, watched by an officer for the purpoſe, in order to ſtop travellers, coaches, and waggons, to take toll of them, towards repairing or keeping the roads paſſable, and in good repair.

TURPENTINE. A tranſparent ſort of reſin, flowing either naturally or by inciſion, from ſeveral unctuous and reſinous trees; as the terebinthus, larch, pine, and fir. See *Reſin*.

We diſtinguiſh ſeveral kinds of turpentine, as that of Chio, and that of Venice; that of Bourdeaux, Cyprus, and Straſburg. The turpentine of Chio, or Scio, which is the only genuine kind, and that which gives the denomination to all the reſt, is a whitiſh reſin, bordering a little on green; very clear, and a little odoriferous, drawn by inciſion from a tree called terebinthus, very common in that iſland, as alſo in Cyprus, and ſome parts of France and Spain.

The reſin muſt be choſen of a ſolid conſiſtence, almoſt without either taſte or ſmell, and not at all tenacious; as this diſtinguiſhes it from the falſe turpentine of Venice, commonly ſubſtituted for it, which has a brisker ſmell, a bitter taſte, and ſticks much to the finger. This turpentine of Chio is indiſputably the beſt; but its ſcarcity occaſions it to be little in uſe. The turpentine of Venice is falſely ſo called; for though there was a turpentine formerly brought from Venice, yet that now ſo called comes from Dauphiné, and is liquid, of the conſiſtence of a thick ſyrup, whitiſh, and flows either ſpontaneouſly, or by inciſion, from the larch-tree, chiefly in the wood de Pilatze. That flowing naturally, called by the peaſants dijon, is a kind of balſam not inferior in virtue to that of Peru; for which it is frequently ſubſtituted. That drawn by inciſion, after the tree has ceaſed to yield ſpontaneouſly, is of conſiderable uſe in ſeveral arts; and it is even of this that varniſh is chiefly made.

It muſt be choſen white, and tranſparent, and care be taken that it has not been counterfeited with oil of turpentine.

The turpentine of Bourdeaux is white, and thick as honey; but does not ooze from the tree in the manner it is ſent to us; being properly a compoſition, wherein, among other ingredients, is a white, hard ſort of reſin called galipot.

The turpentine of Straſburgh, the produce of the abies, or ſilver fir, is that moſt commonly uſed among us, and is preferred by our people to that of Venice, from which it is diſtinguiſhed by its green hue, fragrant ſmell, and citron flavour.

The uſes of turpentine in medicine are innumerable. It is a great vulnerary, very detergent, and as ſuch is preſcribed in abſceſſes and ulcerations. It promotes expectorations, and as ſuch is preſcribed in diſeaſes of the lungs and breaſt; but it is moſt remarkable for clearing the urinary paſſages, and as ſuch preſcribed in obſtructions of the reins and gonorrhœas.

Oil of TURPENTINE. There are two kinds of oils drawn from turpentine by diſtillation, the firſt white, the ſecond red, both eſteemed as balſams proper for the cure of wounds and chilblains; but they are ſo little uſed among us, that it is difficult to procure either of them. What is commonly ſold under the name of oil of turpentine, or ethereal oil, is only a diſtillation of the reſinous juice of the tree as it is gathered, and is uſed with ſucceſs in the curing of green wounds; as alſo by the painters and farriers. To be good, it muſt be clear, and white as water, of a ſtrong penetrating ſmell, and very inflammable.

TURPETH. See *Turbith*.

TURQUOIS. See *Turcois*.

TUSCANY. See *Italy*.

TUTTY. A kind of metallic ſoot, thrown off from braſs in the furnace, and formed into concave flakes of different ſizes and thickneſs; very hard, greyiſh, and full of little protuberant grains, as big as pins heads; being found adhering to rolls of earth, ſuſpended for that purpoſe over the furnaces of the founders in braſs, to receive the fumes of the melted metal.

Tutty is now brought chiefly from Germany; though antiently it came from Alexandria. To prepare it for uſe, they heat it red hot three times in a crucible, among burning coals, and quench it as often in roſe-water; then they grind it on a porphyry ſtone, mixing it with as much roſe-water, or plantain-water, as is neceſſary, till it is brought to a very fine powder; after which they make it up into little troches, and thus dry it.

Tutty is very deſiccative, whoſe principal uſe is in diſeaſes of the eyes, particularly inflammations; in order to which it is to be diluted with roſe-water or plantain-water, and applied in form of a collyrium.

Some alſo uſe it incorporated with hog's lard, or freſh butter, in the form of an unguent.

TWEEZERS. A curious toy, in the nature of a pair of ſciſſars, or nippers.

TWINE. A particular ſort of ſmall packthread, very ſtrong, and ſmooth.

TWIST. A ſort of manufacture uſed by taylors

TYDORE. One of the Molucca iſlands. See *Molucca* iſlands.

TYLE, or *Tile*, in building. A ſort of thin, factitious, laminated ſtone, uſed in the roofs of houſes; or, more properly, a kind of fat, clayey earth, knodden, and moulded of a juſt thickneſs, dried, and burnt in a kiln, like a brick, and uſed in the covering and paving of houſes. See *Brick*.

Tyles are made of better earth than bricks, and ſomething near a-kin to the potters earth. According to the ſtatute of the 17th of Edward IV. the earth for tyles ſhould be caſt up before the 1ſt of November, ſhired and turned before the 1ſt of February, and not made into tyles before the 1ſt of March, and ſhould likewiſe be tried and ſevered from ſtones, marle, and chalk.

As to the applying of tyles, ſome lay them dry, as they come from the kiln, without mortar, or any thing elſe; others lay them in a kind of mortar, made of loam and horſe-dung; but in ſome parts, as in Kent, they lay them in moſs.

There are various kinds of tyles, for the various occaſions of building; ſuch as plain, thack, ridge, roof, creaſe, gutter, pan, crooked, Flemiſh, corner, hip, dorman, dormar, ſcallop, aſtragal, traverſe, paving, and Dutch tyles.

Plain or *thack* TYLES, are thoſe in ordinary uſe for the covering of houſes; being ſqueezed flat, while yet ſoft in a mould, and are of an oblong figure; and, by the ſtatute of the 17th Edward IV. ſhould be $10\frac{1}{2}$ inches long, $6\frac{1}{4}$ broad, and half an inch and half a quarter thick; but theſe dimenſions are not over-ſtrictly kept to.

Ridge, *roof*, or *creaſe* TYLES, are thoſe uſed to cover the ridges of houſes; being made circular, breadth-wiſe, like a half cylinder. Theſe are what Pliny calls *laterculi*, and are by ſtatute to be 13 inches long, and of the ſame thickneſs with the plain tyles.

Hip, or *corner* TYLES, are thoſe which lie on the hips or corners

corners of roofs. As to form, they are firſt made flat, like plain tyles; but of a quadrangular figure, whoſe two ſides are right lines, and two ends, arches of circles, one end being a little concave, and the other convex; the convex end to be about ſeven times as broad as the concave end; ſo that they would be triangular, but that one corner is taken off; then, before they are burnt, they are bent on a mould, breadth-wiſe, like ridgetyles, and have a hole at their narrow end, to nail them on by, being laid with the narrow end upwards. By ſtatute, they are to be 10½ inches long, and of a convenient breadth and thickneſs.

Gutter TYLES, are thoſe which lie in gutters or valleys in croſs-buildings. They are made like corner-tyles, only the corners of the broad end are turned back again with two wings; and having no holes in them, they are laid with the broad end upwards without any nailing. They are made in the ſame mould as corner-tyles, and have the ſame dimenſions on the convex ſide; their wings being 4 inches broad, and 8 long.

Pan, *crooked*, or *Flemiſh* TYLES, are uſed in covering of ſheds, lean-to's, and all kinds of flat-roofed buildings. They are in form of an oblong parallelogram, as plain tyles; but are bent breadth-wiſe forwards and backwards, in form of an S; only one of the arches is at leaſt three times bigger than the other; which biggeſt arch is always laid uppermoſt, and the leſſer arch of another tyle, lies over the edge of the great arch of the former. They have no holes for pins, but hang on the laths by a knot of their own earth. They are uſually 14½ inches long, and 10½ broad. By the 12th of George I. they are to be when burnt not leſs than 13½ inches long, 9½ wide, and ⅛ of an inch thick.

Dorman, or *dormar* TYLES, conſiſt of a plain tyle, and a triangular piece of a plain one, ſtanding up at right angles, to one ſide of the plain tyle, and ſwept with an arch of a circle from the other end, which terminates in a point. Of theſe tyles there are two kinds; the triangular piece, in ſome ſtanding on the right, in others on the left ſide of the plain tyle: and of each of theſe, again, there are two kinds; ſome having a whole plain tyle, others but half a plain tyle; but in them all the plain tyles have two holes for the pins, at that end where the broad end of the triangular piece ſtands.

Their uſe is to be laid in gutters, betwixt the roof and cheeks or ſides of the dormars, the plain part lying on the roof, and the triangular part ſtanding perpendicularly by the cheek of the dormar. They are of excellent uſe to keep out the rain in thoſe places, and yet perhaps are not any where known but in Suſſex. The dimenſions of the plain tyle part, are the ſame as thoſe of the plain tyle; and the triangular part is of the ſame length, though its breadth at one end is 7 inches, and at the other nothing.

Scallop, or *aſtragal* TYLES, are a kind of irregular plain tyles, only their lower ends are in form of an aſtragal, which is a ſemi-circle, with a ſquare on each ſide. Theſe are uſed in ſome places for weather-tyling.

Traverſe TYLES, are a kind of irregular plain tyles, having the pin-holes broke out, or one of the lower corners broke off. They are laid with the broken end upwards, upon rafters, where the pinned tyles cannot hang.

Flemiſh, or *Dutch* TYLES, are of two kinds, antient and modern. The antient were uſed for chimney-foot footpaces, painted with antique figures, and frequently with poſtures of ſoldiers; ſome with compartments, and ſometimes with moreſque devices; but came much ſhort, both as to the deſign and colours, of the modern ones. The modern Flemiſh tyles are commonly uſed plaiſtered up in the jaumbs of chimneys, inſtead of chimney corner-ſtones. Theſe are better glazed; and ſuch as are painted, for ſome are only white, much better performed than the antient ones; but both kinds ſeem to be made of the ſame whitiſh clay as our white glazed earthenware. The antient ones are five inches and a quarter ſquare, and about three quarters of an inch thick; the modern ones, ſix inches and half ſquare, and three quarters of an inch thick.

TYLER. An artificer, who covers the roofs of houſes, with tyles made of baked earth, commonly flat; but ſometimes ſquare, ſometimes parallelogrammic, and otherwiſe, for the purpoſe of pavements, or the ſides of chimneys, gutters, and ridges of houſes.

TYLERS *and bricklayers company of London*, though it appears to be of conſiderable ſtanding, yet was not incorporated till the time of Queen Elizabeth; who, by her letters-patent, dated the 3d of Auguſt 1568, incorporated them by the title of The maſter and keepers, or wardens, of the ſociety of freemen of the myſtery or art of tylers and bricklayers of London.

This company conſiſts of a maſter, 2 wardens, 38 aſſiſtants, and 103 liverymen; who, on admiſſion, pay a fine of 12 l.; and have a handſome hall in a court in Leadenhall ſtreet, where they tranſact their affairs.

TYMFE. A ſmall Poliſh coin, worth about 3d. ſterling.

TYPOGRAPHY. The art of printing.

TYRE. A port-town of Phenicia, in Aſiatic Turky, ſituated in 36 deg. of E. lon. and 32 deg. 32 min. of N. lat. on the coaſt of the Levant, 60 miles S. W. of Damaſcus; antiently the capital of Phenicia, and enjoyed the moſt extenſive traffic of any town in the world.

V.

VAL VAR

VADA. A port-town of Italy, in the dukedom of Tuſcany, lying in 10 deg. 20 min. of E. lon. and 43 deg. 17 min. of N. lat. on the Tuſcan ſea, 10 miles S. of Leghorn.

VADO. A port-town of Genoa in Italy, lying in 9 deg. 8 min. of E. lon. and 44 deg. 16 min. of N. lat. 3 miles W. of Savona, and 36 miles S. W. of Genoa city.

VAHATS. A ſhrub growing in the iſland of Madagaſcar, whoſe root is good for dying.

For uſing this root, the bark is ſtripped off, which is the only part for yielding the colour; and, after having reduced a part of it into aſhes, wherewith a kind of lixivium is made, the reſerved part of the bark is ſet to boil in this lixivium, together with the materials to be dyed; but care muſt be taken that the fire is not too briſk. The colour produced by this dye is a beautiful flame colour; or bright yellow, by adding a little citron juice.

VAKIE. The Perſian ounce, equal to the ounce avoirdupoiſe. See *Batman*.

VAL. A ſmall weight uſed in the Eaſt Indies, for weighing piaſters, of eight rials. Each rial ſhould weigh 73 vals; otherwiſe the vender muſt ſupply what is wanting. The val is alſo uſed for gold ducats, which are to weigh 9 vals, and $\frac{1}{16}$ of a caract, Indian weight: the vender being obliged to make up what is deficient.

VALERIAN. A plant, whoſe root is of conſiderable uſe in medicine; being thus called, according to ſome, from one Valerius, who firſt brought it into uſe; and, according to others, from *valere*, to be of great virtue.

There are various kinds of valerian; but thoſe chiefly in uſe, are the large garden valerian, called, by Dioſcorides, *phu, folio oluſatri*; and the *valeriana ſylveſtris*, or great wild valerian. The former is an ingredient in Venice treacle: its chief uſe is in diſorders of the nerves; in which reſpect, however, it is held inferior to the latter. The wild valerian is warm and aromatic; but ſomewhat of a fetid ſcent: its efficacy as a ſudorific, is ſupported by the teſtimony of both ancient and modern practice.

VALLERY, *St.* A port-town of France, in the province of Picardy, ſituated on the Eaſt channel, 45 miles N. of Rouen.

VALONA. A port-town of Albania, in European Turky, ſituated in 20 deg. 1 min. of E. lon. and 41 deg. 6 min. of N. lat. on a fine bay of the gulph of Venice, 40 miles S. of Durazzo.

VALPARISA. A port-town of Chili in South America, lying in 77 deg. of W. lon. and 33 deg. of S. lat. on the coaſt of the Pacific ocean, 50 miles N. of St. Jago.

VALUE, in commerce, the price or worth of any thing.

Intrinſic VALUE, denotes the proper, real, and effective worth of any thing; being uſed chiefly with regard to money; the popular value whereof may be raiſed and lowered at the pleaſure of the prince: but its real, or intrinſic value, depending wholly on its weight and fineneſs, is not at all affected by the ſtamp or impreſſion thereon. See *Money*, and *Coin*.

It is generally on the foot of this intrinſic value, that ſpecies are received in foreign countries; tho', in the places where they are coined, and where the ſovereign power makes them current, they generally paſs for much more.

It is, in good meaſure, on the difference of thoſe two values, one of which is almoſt arbitrary, and the other in ſome ſort natural, that the difference of exchanges depends; and thoſe ſtill riſing and falling, as the rate at which a ſpecies is current, comes nearer or farther off the juſt price of the metal of which it conſiſts. See *Exchange*.

VALUE, in bills of exchange, is uſed to ſignify the nature of the thing; as ready money, merchandiſes, bills, and debts; which is given in a kind of exchange from the ſum ſpecified in the bill.

From four different manners of expreſſing this value, ſome diſtinguiſh four kinds of bills of exchange. The firſt bears value received, ſimply and purely, which comprehends all kinds of value; the ſecond, value received in money, or merchandiſe; the third, value of myſelf; and the fourth, value underſtood. The firſt is dangerous, and the fourth but little uſed: accordingly, to have the value well expreſſed, and to prevent the ill conſequences of overſights therein, it is well provided by the French ordnance of 1673, that bills of exchange ſhall contain the name of the perſon to whom the contained ſum is to be paid; the time of payment; the name of him who has given the value; and whether it was received in money, merchandiſe, or other effects. See *Exchange*.

VANEERING. See *Veneering*.

VANILLA. A little black ſeed, growing in longiſh pods, in Spaniſh America, uſed in the Weſt Indies, France, and Spain, as a principal ingredient in the compoſition of chocolate; to give it ſtrength and an agreeable flavour.

The pod of the vanilla is about half a foot in length, and as thick as a child's little finger. The plant producing it has middling ſized leaves ſprouting from the knots of its ſtalk, which is weak, and about 12 or 15 feet in height; ſo that it has an occaſion for a prop like hops, or French beans. The pods are firſt green, afterwards yellow, and laſtly brown when ripe. In their perfect maturity, they are filled with a ſweet juice, of a very agreeable ſmell; in which their ſeed is almoſt imperceptible.

The pods of vanilla ſhould be choſen plump, long, odorous, heavy, without wrinkles, fat, ſupple, and the ſeed black, and gloſſy. See *Chocolate*.

VARENNE. A corn meaſure uſed in ſome parts of Savoy, weighing about 30 lb. avoirdupoiſe.

VARI. A weight uſed by the inhabitants of Madagaſcar, weighing about half a dram avoirdupoiſe.

VARIABLE *winds*. See *Wind*.

VARIATION, in geography and navigation, a term applied to the deviation of the magnetical needle, or compaſs, from the true north point, towards either eaſt or weſt; called alſo the declination.

The variation or declination of the needle, is properly defined, the angle which a magnetical needle, ſuſpended at liberty, makes with a meridian line on a horizontal plane; or an arch of the horizon, comprehended between the true and the magnetical meridian.

In the ſea-language, the variation is uſually called north-eaſting, or north-weſting. See *Compaſs*, and *Needle*.

All magnetic bodies are found to range themſelves in ſome ſort to the meridian; but it is rare they fall in preciſely with it: in one place, they decline from the north to the eaſt; and in another, on the contrary, from the north to the weſt, and from the ſouth to the eaſt; and that too differently, at different times.

Various are the hypotheſes framed to account for this extraordinary phænomenon: but it is neceſſary only to mention ſome of the later and more probable. The firſt is that of Gilbert, which is followed by Cabeus: their notion was, that it is the earth or land which draws the needle out of its meridional direction; and hence they argued, that the needle varied more or leſs, as it was more or leſs diſtant from any great continent: conſequently, that if it was placed in the middle of an ocean, equally diſtant from equal tracts of land, on each ſide, eaſtward and weſtward, it would not decline to the one or the other; but point juſtly north and ſouth. Thus, in the Azores iſlands, which are equally diſtant from Africa on the eaſt, and America on the weſt, there is, in effect, found no variation; but as from the Azores you ſail towards Africa, the needle begins to decline from the north to the eaſt; and that ſtill more and more till you reach the ſhore. If you ſtill proceed eaſtward, the declination gradually diminiſhes again, by reaſon of the land left behind on the weſt, which continues to draw the needle: the ſame holds till you arrive at a place where there are equal tracts of land on each ſide, and there, again, there is no variation. The obſervations of our mariners in their Eaſt India voyages, ſeem to confirm this ſyſtem: as they proceed towards the Cape of Good Hope, the variation is ſtill eaſtward; at length, arriving at the Cape de las Aguillas, that is, of the needles, the meridian line, then, dividing Africa into two equal parts,

there is no variation at all: but, as they proceed farther, and leave the African coaſts on the weſt, the variation becomes weſtward. However, the law does not hold univerſally; for, in effect, a great number of obſervations of variations in various parts, made and collected by Dr. Halley, overturn the whole theory. Others, therefore, have recourſe to the frame and compages of the earth, conſidered as interwoven with rocks and ſhelves; which being generally found to run towards the poles, the needle comes to have a general tendency that way; but which ſeldom going perfectly in the direction of the meridian, the needle, of conſequence, has commonly a variation.

Others hold, various parts of the earth have various degrees of the magnetic virtue; as ſome are more intermixed with heterogeneous matters, which prevent the free action, or effect thereof, than others. Others aſcribe all to magnetic rocks, and iron mines, which, affording more of the magnetic matter than other parts, draw the needle more.

Laſtly, others imagine earthquakes or high tides to have diſturbed and diſlocated ſeveral conſiderable parts of the earth, and ſo changed the magnetic axis of the globe, which originally was the ſame with the axis of the globe itſelf. But ſtill that great phænomen, the variation of the variation, that is, the continual change of the declination, in one and the ſame place, which the modern obſervations abundantly evince, is not accountable for on any of theſe foundations; nor even conſtant with them. Dr. Halley, therefore, gives us a new ſyſtem; the reſult of a great number of obſervations; and even of a great number of voyages made, at the public expence, on this very account: the light that excellent author has let into this obſcure part of natural hiſtory, is very great; and the conſequences thereof in navigation, very conſiderable. To which may be added, that he has reduced the divers variations of divers places to a preciſe rule or order, which before appeared all precarious and arbitrary. His theory, therefore, will require a more ample detail. The obſervations it is built on, as laid down in the Philoſophical Tranſactions, are as follow.

Obſervations of the Variation of the Needle, in divers Places, and at divers Times.

From

From theſe obſervations, the learned author gathers, firſt, That throughout all Europe, the variation at this time is weſt; and more in the eaſtern parts thereof than the weſtern, increaſing that way. 2. That on the coaſts of America, the variation is weſterly; increaſing all the way as you go northerly along the coaſt; ſo as to be above 20 deg. at Newfoundland; nearly 30 deg. in Hudſon's ſtraits, and not leſs than 57 deg. in Baffin's bay: and that as you ſail eaſtward from this coaſt, the variation diminiſhes. Hence he argues, ſomewhere between Europe and the north part of America, there muſt be an eaſterly variation, or at leaſt no variation. 3. That on the coaſt of Brazil there is eaſt variation, increaſing as you go to the ſouthward, ſo as to be 12 degrees at Cape Frio, and 20 degrees and half over againſt R. Plata; and thence ſailing ſouth weſterly, to the ſtreights of Magellan, it decreaſes 17 degrees, and at the weſt entrance about 14. 4. That eaſtward of Brazil, this eaſterly variation decreaſes, ſo as to be very little at St. Helena and Aſcenſion, and to be quite gone, and the compaſs point true, about 18 degrees longitude from the Cape of Good Hope. 5. That to the eaſtward of the aforeſaid places, a weſtward variation begins and governs in all the Indian ſea, riſing to 18 degrees under the equator, about the meridian of the northern part of Madagaſcar; and 27 degrees and a half, in 39 degrees ſouth latitude, near the ſame meridian: eaſterly from thence, the weſt variation decreaſes, ſo as not to be much above 8 degrees at cape Comorin, about three on the coaſt of Java, and near the Molucca iſlands to be quite gone; as alſo a little to the weſtward of Van Diemen's land. 6. That to the eaſtward of the Moluccas, and Van Diemen's land in ſouth latitude, there ariſes another eaſterly variation, which ſeems not ſo great as a former, nor of ſo large extent; for that at the iſland Rotterdam, is ſenſibly leſs than upon the eaſt coaſt of New Guinea; and, at the rate it decreaſes, it may well be ſuppoſed, that about 20 degrees further to the weſtward, or 225 degrees eaſt longitude from London, in the latitude of 20 degrees ſouth, a weſterly variation begins. 7. That the variation taken at Baldivia, and at the weſt entrance of the ſtreights of Magellan, ſhew that the eaſt variation, noted in the third obſervation, is decreaſing apace; and that it cannot well deſcend many degrees into the South ſea, from the coaſt of Peru and Chili, leaving room for a ſmall weſterly variation in that tract of the unknown world, that lies in the mid-way between Chili and New Zealand, and between Hound's iſland and Peru. 8. That in ſailing north-weſt from St. Helena, by Aſcenſion, as far as the equator, the variation continues very ſmall eaſt, and, as it were, conſtantly the ſame: ſo that in this part of the world, the courſe wherein there is no variation is evidently no meridian; but rather north-weſt. 9. That the entrance of Hudſon's ſtreights, and the mouth of R. Plata, being nearly under the ſame meridian, at the one place the needle varies 29 degrees and a half weſt; at the other 20 degrees and a half eaſt.

Theory of the VARIATION *of the needle.* From the circumſtances above rehearſed, the learned author takes occaſion to aſſert, "That the whole globe of the earth, is "one great magnet; having four magnetical poles, or "points of attraction; near each pole of the equator, "two; and that, in thoſe parts of the world which lie "nearly adjacent to any one of theſe magnetical poles, "the needle is governed thereby; the neareſt pole being "always predominant over the more remote."

The pole which at preſent is neareſt to us, he conjectures to lie in or near the meridian of the land's end of England, and not above 7 degrees from the arctic pole: by this pole, the variation of all Europe and Tartary, and the North ſea, are principally governed; tho' ſtill with ſome regard to the other northern pole, whoſe ſituation is in the meridian, paſſing about the middle of California, and about 15 degrees from the north pole of the world; to which the middle has chiefly reſpect in all the north of America, and in two oceans on either ſide thereof, from the Azores, weſtwards, to Japan and farther.

The two ſouthern poles, he imagines, are rather further diſtant from the ſouth pole of the world; the one about 16 degrees therefrom, in a meridian ſome 20 degrees to the weſtward of Magellan ſtreights, or 95 degrees weſt from London: this commands the needle in all South America, in the Pacific ſea, and the greateſt part of the Ethiopic ocean. The other ſeems to have the greateſt power, and largeſt dominion of all; as it is moſt remote from the pole of the world; being little leſs than 20 degrees diſtant therefrom, in the meridian which paſſes through New Holland, and the iſland Celebes, about 120 degrees eaſt of London: this pole is predominant in the ſouth part of Africa, in Arabia, and the Red ſea, in Perſia, India, and its iſlands; and all over the Indian ſea, from the Cape of Good Hope eaſtwards, to the middle of the great South ſea that divides Aſia from America.

Such ſeems to be the preſent diſpoſition of the magnetical virtue, throughout the whole globe of the earth. It remains to ſhew how this hypotheſis accounts for all the variations that have been obſerved of late; and how it anſwers to the ſeveral remarks drawn from the table. Firſt then, it is plain, that as our European north pole is in the meridian of the land's end of England, all places more eaſterly than that will have it on the weſt ſide of their meridian; and conſequently the needle, reſpectable to its northern point, will have a weſterly variation; which will ſtill be greater as you go to the eaſtward, till you come to ſome meridian of Ruſſia, where it will be the greateſt, and from thence decreaſe again. Accordingly, in fact, we find that at Breſt the variation is but one degree three quarters; at London four degrees and a half; and at Dantzick ſeven degrees weſt, in 1683. Again, to the weſtward of the meridian of the land's end, the needle ought to have an eaſterly variation; were it not, by approaching the American northern pole, which lies on the weſt ſide of the meridian, and ſeems to be of greater force than this other, the needle is drawn thereby weſtward, ſo as to counter-balance the direction given by the European pole, and to make a ſmall weſt variation in the meridian of the land's end itſelf: yet, about the iſle Tercera, it is ſuppoſed our neareſt pole may ſo far prevail, as to give the needle a little turn to the eaſt, tho' for but a little ſpace; nor upon the weſt coaſts of England and Ireland, France, Spain, and Barbary. But, to the weſtward of the Azores, the power of the American pole overcoming that of the European, the needle has chiefly reſpect thereto; and turns ſtill more and more towards it as you approach it. Whence it comes to paſs, that on the coaſt of Virginia, Newfoundland, and in Hudſon's ſtreights, the variation is weſtward, that is, increaſes as you go from thence to Europe; and that it is leſs in Virginia and New England, than in Newfoundland and Hudſon's ſtreights.

2. This weſterly variation, again, decreaſes, as you paſs over North America; and, about the meridian of the middle of California, the needle again points due north; from thence weſtward, to Yedzo and Japan, it is ſuppoſed the variation is eaſterly; and half ſea over, not leſs than 15 degrees: but that this eaſt variation extends over Japan, Yedzo, eaſt Tartary, and part of China, till it meets with the weſterly, which is governed by the European north pole, and which is the greateſt ſomewhere in Ruſſia.

3. Towards the ſouth pole, the effect is much the ſame, only that here the ſouth point of the needle is attracted. Whence it will follow, that the variation on the coaſt of Brazil, and ſo on to the ſtreights of Magellan, ſhould be eaſterly, if we ſuppoſe a magnetical pole, ſituated about 20 degrees more weſterly than the ſtreights of Magellan. And this eaſterly variation extends eaſtward over the greateſt part of the Ethiopic ſea, till it is counterpoiſed by the virtue of the other ſouthern pole: as it is about midway between the Cape of Good Hope and the iſles of Triſtran d'Acunha.

4. From thence eaſtwards, the Aſiatic ſouth pole becoming prevalent, and the ſouth point of the needle being attracted thereby; there ariſes a weſt variation, very great in quantity and extent; becauſe of the great diſtance of the magnetical pole of the world. Hence it is, that all the Indian ſea, as far as Hollandia Nova, and

further, there is a conſtantly weſt variation; and that, under the equator itſelf, it riſes to no leſs than 18 degrees at moſt. Add, that about the meridian of the iſland of Celebes, being likewiſe that of this pole, this weſterly variation ceaſes, and the eaſterly begins, which reaches to the middle of the South ſea, between the middle of Zelandia Nova and Chili; leaving room for a ſmall weſt variation, governed by the ſouth pole.

5. From the whole it appears, that the direction of the needle, in the temperate and frigid zones, depends chiefly upon the counterpoiſe of two magnetical poles of the ſame nature; as alſo, why, under the ſame meridian, the variation ſhould be in one place 29 degrees and a half weſt, and in another 20 degrees and a half eaſt?

6. In the torrid zone, and particularly under the equinoctial, reſpect muſt be had to all four poles, and their poſitions well conſidered; otherwiſe it will not be eaſy to determine what variations ſhall be; the neareſt pole being always ſtrongeſt: yet, not ſo as ſometimes not to be counter-balanced by the united forces of two more remote. Thus, in ſailing from St. Helena by the iſland of Aſcenſion, to the equator, on the north-weſt courſe, the variation is very little eaſterly, and in that whole tract unalterable; becauſe the South American pole, which is conſiderably the neareſt in thoſe places, requiring a great eaſterly variation, is counterpoiſed by the contrary attraction of the North American, and the Aſiatic ſouth pole; each whereof, ſingly, is, in theſe parts, weaker than the American ſouth pole; and upon the north-weſt courſe, the diſtance from this latter is very little varied; though, as you recede from the Aſiatic ſouth pole, the balance is ſtill preſerved by acceſs towards the north American pole. In this caſe, no notice is taken of the European north pole; its meridian being little removed from thoſe of theſe places, and of itſelf requiring the ſame variation we find here. After the ſame manner, may the variations in other places, under and near the equator, be accounted for: ſo that the hypotheſis muſt be allowed very adequate, and ſufficient for the phænomena. See *Variation* of variation.

To obſerve the variation or declination of the needle. Draw a meridian line; then, a ſtile being erected in the middle thereof, place a needle thereon, and draw the right line it hangs over. Thus, the quantity of variation will appear. See *Compaſs*. Or thus; as the former method of finding the declination cannot be applied at ſea, others have been thought of; the principal whereof follow. Suſpend a thread and plummet over the compaſs, till the ſhadows paſs through the centre of the card; obſerve the rhumb, or point of the compaſs which the ſhadow touches when it is the ſhorteſt; for the ſhadow is then a meridian line; conſequently the variation is ſhewn. Or thus, obſerve the rhumb wherein the ſun, or ſome ſtar riſes and ſets, biſſect the arch intercepted between the riſing and ſetting; the line of biſſection will be the meridian line: conſequently the declination is had as before. The ſame may be had from two equal altitudes of the ſame ſtar, obſerved either by day or night.

Or thus; obſerve the rhumb wherein the ſun, or a ſtar riſes and ſets; and from the latitude of the place, find the eaſtern or weſtern amplitude; for the difference between the amplitude and the diſtance of the rhumb obſerved, from the eaſtern rhumb of the card, is the variation ſought.

Variation of VARIATION, is the change in the declination of the needle, obſerved at different times in the ſame place. This variation, firſt as is ſaid diſcovered by Gaſſendus, is found to obſerve the ſame law pretty regularly, and is ſuppoſed to be owing to the difference of velocity of the motions, of the internal and external parts of the globe.

Theory of Variation of VARIATION. From the obſervations above recited, under the head of variation, it ſeems to follow, that all the magnetical poles have a motion weſtward: but, if it be ſo, it is evident, that it is not a rotation about the axis of the earth; for then the variations would continue the ſame, in the parallel of latitude, the longitude being only changed, as much as the motion of the magnetical poles: but the contrary is found by experience; for there is no where, in the latitude of 51 and a half north, between England and America, a variation of 11 degrees eaſt, at this time, as it was once here at London. Wherefore, it ſeems that our European pole, is grown nearer the arctic pole, than it was here before; or elſe that it has loſt part of its virtue. But whether theſe magnetic poles move altogether with one motion, or with ſeveral; whether equally or unequally; whether circular or libratory; if circular about what centre; if libratory, after what manner; are things yet unknown.

VARNISH, or *Verniſh*. A thick, viſcid, gloſſy liquor; uſed by painters, gilders, and various other artificers, to give a gloſs and luſtre to their works, as alſo to defend them from the weather and duſt. There are various kinds of varniſhes, all made of gums diſſolved in ſpirit of wine.

White VARNISH, is uſually made of gum ſandarach, and gum maſtick, diſſolved in ſpirits; left to ſettle two days; then ſtrained through a linen cloth; and, after ſtanding ſome time, the clear poured off and bottled for uſe. The moſt curious artiſts diſſolve the gums ſeparately; and, having made a ſeparate varniſh of each, mix them occaſionally, as their work requires a ſtiffer or a ſofter varniſh: but, for the beſt white varniſh, more gums are required; ſuch as Venice turpentine, gum copal, elemi, benzoin, animæ, and white roſin.

Lacc VARNISH, is made of gum lacca and ſpirit of wine, frequently ſhaken, till the gum is diſſolved; then ſtrained, and the clear decanted off, as above. The lacc ought to be of the kind called ſeed lacc; tho' for varniſhing ordinary woods, ſhell lacc is often uſed; but will not ſtand the weather.

Beſides theſe, there are hard and ſoft varniſhes, or grounds, uſed by the etchers and engravers.

VARNISH, is alſo uſed for a kind of gloſſy coat, wherewith potters ware, Delft ware, and China ware, are covered, to give them a ſmoothneſs and luſtre. Melted lead is the varniſh ordinarily uſed for the firſt; and ſmalt for the ſecond.

The true varniſh uſed by the Chineſe and Japaneſe, to give their inimitable luſtre to the porcelain, is one of the grand ſecrets of that manufacture; and almoſt the only thing wanting to make Engliſh, Delft, and French ware vye with the Chineſe: ſeveral have deſcribed the preparation thereof, particularly Kircher; but none have ever ſucceeded in the trial. See *Porcelain*.

According to father le Comte, in his memoirs of China, the Chineſe varniſh is not a compoſition, but a gum, like tar, mixed with oil; and it is very common, adds this learned Jeſuit, in all parts of China, called wone, when it aſſumes all ſorts of colours; the Chineſe mixing therewith gold and ſilver flowers, and repreſenting thereon men, mountains, palaces, beaſts, birds, and every particular amuſement of the imagination.

For common works, they place two or three lays; but, for ſuch as they are willing to make perfect, they place ſeveral lays. When the varniſh is dry, they paint thereon what they pleaſe; after which, the better to preſerve and give it more luſtre, they put on another ſlight lay.

The varniſh of Tunquin is alſo very beautiful; but that of Japan is not in the leaſt inferior to the Chineſe.

The Perſian varniſh is compoſed of ſandarach, and linſeed oil, reduced into the conſiſtence of an unguent; being diſſolved for uſe with oil of naphta, or rectified ſpirits of wine.

VARRE. A meaſure for ſtuffs uſed in Spain, at Goa, and Ormus, whoſe length is about 5 feet 5 inches.

VASE. A term of equal import with the Latin vas, whence it is formed, and the Engliſh veſſel. It is applied to the ancient veſſels dug from under ground, or otherwiſe found, and preſerved in cabinets; as veſſels of ſacrifice, or urns; and to other modern veſſels, which are rather of curioſity and ſhew, than uſe, as thoſe of cryſtal and porcelain.

VAT, or *Fat*. A kind of veſſel uſed to hold wine, ale, beer, cyder, or any other liquor, in the time of its preparation.

VAXEL. A kind of buſhel, uſed in the ſalt marſhes of Lorrain, for meaſuring ſalt, weighing 34 or 35 lb. avoirdupoiſe.

UBES, *St.* A port-town of Portugal, in the province of Eſtremadura, lying in 9 deg. 30 min. of W. lon. and 38 deg. 36 min. of N. lat. on a fine bay of the Atlantic ocean, 21 miles S. of Liſbon.

VECHT. A river of the United Netherlands, which runs from E. to W. croſs the province of Overyſſel, and falls into the Zuyderzee below Swartſluys.

VEER. A ſea term, variouſly uſed. Veering out a rope, denotes the letting it go by hand, or letting it run out of itſelf: thus they ſay, *veer out more cable*; that is, let more run out; but the word is not uſed for the letting out of any running rope, except the ſheet.

VEER, is alſo uſed in reference to the wind; for when it changes ſuddenly, they ſay, *the wind veers*; alſo when a ſhip under ſail has her ſheat veered out, they ſay, *ſhe goes veering*; that is, at large, neither by a wind, nor directly before it, but between both; which they alſo call quartering.

VEGETABLE, in phyſiology. A term applied to all plants, conſidered as capable of growth; that is, all natural bodies, which have parts organically formed for generation, and accretion; but not ſenſation.

Boerhaave very ſcientifically defines a vegetable to be a body generated of the earth, to which it adheres, or is connected, by parts called roots; thro' which it receives the matter of its nouriſhment, and increaſes, and conſiſts of juices and veſſels, ſenſibly diſtinct from each other: or a vegetable is an organical body compoſed of veſſels and juices, every where diſtinguiſhable from each other; to which grow roots, or parts, whereby it adheres to ſome other body, from which it derives the matter of its life, and growth: for, by its conſiſting of veſſels and juices, it is diſtinguiſhed from a foſſil; and, by its adhering to another body, and deriving its nouriſhment therefrom, it is diſtinguiſhed from an animal.

VEGETABLE *Oil.* See *Oil.*

VEIL. A piece of ſtuff, ſerving to prevent or hide the ſight of any thing.

VEIL, is alſo uſed for a large piece of crape, wore on the head by nuns, as the badge of their profeſſion.

VEIN, is applied to the ſtreakes, or waves of various colours, appearing on ſeveral ſorts of woods, ſtones, and marble, as if they were really painted; and which the painters frequently imitate, in painting wainſcots: marble being generally full of ſuch veins. See *Marble.*

Veins in ſtones are a defect, proceeding uſually from an inequality in their conſiſtence; as too hard and ſoft, which makes the ſtone crack and ſhiver in thoſe parts.

VEIN, is alſo applied, in the ſame ſenſe with ſtratum, to the various diſpoſitions and kinds of earths met with in digging. Thus, we ſay, a vein of ſand, and another of rock; a vein of ocher, vitriol, calamine, and coal. Mineral waters acquire their different qualities, by paſſing thro' veins of iron, vitriol, and ſulphur.

In the ſame ſenſe, we ſay a vein of gold, ſilver, quickſilver, and lead; meaning certain parts of the earth, wherein the ore or glebe of thoſe metals is found; and which is diſtributed into ſeveral branches, like the veins in the body.

VEISSEL. A corn meaſure uſed at Chamberry in Savoy, which weighs about 140 lb. avoirdupois.

VEIT, *St.* A city and port-town of Germany, in the circle of Auſtria, and duchy of Carniola, lying in 15 degrees of E. lon. and 45 deg. 40 min. of N. lat. on the gulph of Venice, 50 miles S. of Laubach, ſubject to the Houſe of Auſtria.

VELA. A remarkable cape on the coaſt of Terra Firma, in South America, lying in 73 deg. 30 min. of W. lon. and 12 deg. of N. lat. 180 miles N. W. of St. Martha.

VELLON, or *Veillon*, in Spaniſh, ſignifies *billon*; that is, copper, or braſs money; being alſo uſed among the Spaniards for diſtinguiſhing ſome monies of accompt.

Thus they ſay a ducat, a rial, on a maravedis of vellon, in oppoſition to thoſe called plata; the one being almoſt double the other; as the rial of vellon worth only 18 maravedis of ſilver, and the rial of Plata worth 34 of ſilver. See *Plata*, *Ducat*, *Rial*, and *Maravedis*.

VELOM. A kind of parchment, finer, evener, and whiter than the common parchment. See *Parchment.*

VELVET. A rich kind of ſtuff, all ſilk, covered on the outſide with a cloſe, ſhort, fine, ſoft ſhag; the other ſide being a very ſtrong cloſe tiſſue.

The nap or ſhag, called alſo the velveting of this ſtuff, is formed of part of the threads of the warp, which the workman puts on a long narrow channelled ruler, or needle; and which he afterwards cuts, by drawing a ſteel tool along the channel, to the ends of the warp. The principal and beſt manufactories of velvet are in France, and Italy; particularly at Venice, Milan, Florence, Genoa, and Lucca: there are others in Holland, ſet up by the French refugees; whereof that of Haerlem is the moſt conſiderable: but theſe all come ſhort of the beauty of thoſe of France; and, accordingly, are ſold for 10 or 15 leſs *per cent.* But the velvet manufacture is now very conſiderable in England; where alſo ſtuffs of this faſhion are made to reſemble ſilk. There are even ſome brought from China, but they are the worſt of all. There are velvets of various kinds; as *plain*, that is uniform and ſmooth, without either figures or ſtripes.

Figured VELVET, that is, adorned and worked with various figures, tho' the ground is the ſame with the figures; that is the whole ſurface velveted.

Ramage, or branched VELVET, repreſenting long ſtalks, and branches, on a ſatin ground, which is ſometimes of the ſame colour with the velvet; but more uſually of a different one. Sometimes, inſtead of ſatin, they make the ground of gold, and ſilver; whence the denomination of velvets with gold ground.

Shorn VELVET, is that wherein the threads which make the velveting have been ranged in the channelled ruler; but not cut there.

Striped VELVET, is that wherein there are ſtripes of various colours, running along the warp, whether thoſe ſtripes are partly velvet, and partly ſatin, or all velveted.

Cut VELVET, is that wherein the ground is a kind of taffety, or gros de tours, and the figures velvet. Velvets are likewiſe diſtinguiſhed, with regard to their different degrees of ſtrength and goodneſs, into velvets of four threads, three threads, two threads, and a thread and half; the firſt are thoſe where there are eight threads of ſhag, or velveting, to each tooth of the reed; the ſecond have only ſix, and the reſt four. In general, all velvets both worked and cut, ſhorn and flowered, are to have their warp and ſhag of organſin, ſpun and twiſted, or thrown in the mill; and their woof of ſilk well boiled: but they are all of the ſame breadth.

VENEERING, *Vaneering*, or *Finneering*. A kind of marquetry, or inlaying, whereby ſeveral thin ſlices, or leaves of fine wood, of different kinds, are applied and faſtened on a ground of ſome common wood.

There are two kinds of inlaying; the one, which is the more ordinary, goes no further than the making of compartments of different woods: the other requires a deal more art, and repreſents flowers, birds, and the like figures. The firſt kind is what we properly call veneering; and the latter is already deſcribed under marquetry.

The wood intended for veneering, is firſt ſawed out into ſlices or leaves about a line thick; and, in order to ſaw them, the block or planks are placed upright, in a kind of ſawing preſs.

Theſe ſlices are afterwards cut into narrow ſlips, and faſhioned ſeveral ways, according to the deſign propoſed: then the points being carefully adjuſted, and the pieces brought down to their proper thickneſs, with ſeveral planes for the purpoſe, they are glued down on a ground, or block of dry wood, with ſtrong Engliſh glue. The pieces thus jointed and glued, the work, if ſmall, is put in a preſs; or, if large, it is laid on the bench, covered with a board, and preſſed down with poles, or pieces of wood, one end whereof reaches to the cieling of the room, and the other bears on the board.

When the glue is quite dry, they take it out of the preſs, and finiſh it; firſt with little planes, then with ſeveral ſorts of ſcrapers; ſome whereof reſemble raſps, which take off the knots, and dents made by the planes. When ſufficiently ſcraped, the work is poliſhed with theſkin of

a ſea dog, wax, and a bruſh and poliſher of ſhave-graſs, which is the laſt operation.

VENEZUELLA-*bay*, is a ſpacious gulph on the coaſt of Terra Firma, in South America, which has a communication with the lake of Marecaibo, by a narrow ſtrait.

VENICE. A republic of Italy, is bounded by the Griſons, Trent, and Tyrol, on the north; by Carniola and the gulph of Venice on the eaſt; by Romania, and the dutchy of Mantua on the ſouth; and by the dutchy of Milan on the weſt; being 180 miles long, and 100 broad. See *Italy*.

VENICE-*treacle*. See *Theriaca*.

VENISON. A fleſh of beaſts of game, or of animals to be caught in the way of game; that is, by hunting, ſhooting, netting, and the like: but it is more particularly applied to the fleſh of deer, which is ſold in London by the fiſh mongers and paſtry-cooks.

VENT, is the ſale of any commodity.

VENTJAGGERS, or *Wind-courſers*, is a term in Holland for the firſt buſſes that go to the herring-fiſhery, which have the privilege of loading and unloading at all times, even on Sundays, and before ſun-riſe, or after ſun-ſet; though it is contrary to the regulations made by the States General in the placard of 1725, for the execution of the new tariff of the duties of importation and exportation.

VENTIMIGLIA. A port-town of Italy, in the territory of Genoa, ſituated in 7 deg. 30 min. of E. lon. and 43 deg. 45 min. of N. lat. on the Mediterranean ſea, 16 miles E. of Nice, and 100 miles S. W. of Genoa.

VENTURE. See *Adventure*.

VENTURINE, or *Adventurine*, is ſometimes uſed for the fineſt and ſlendereſt gold wire, uſed by embroiderers.

When reduced into powder, as fine as it can be clipped, or filed, this powder may be ſtrewed on the firſt layer of pure varniſh, made uſe of in japanning, after the varniſh is dry, in order to lay any colour over it.

VENUS, in chemiſtry, is a term for copper. See *Copper*.

Chryſtals of VENUS. See *Chryſtal*.

VERA. A port-town of Spain, in the province of Granada, near the frontiers of Murcia, lying in 1 deg. 45 min. of W. lon. and 37 deg. 16 min. of N. lat. on the coaſt of the Mediterranean, 44 miles S. W. of Carthagena.

VERA CRUZ. A port-town of Mexico, in America, in the province of Tlaſcala, lying in 100 deg. of W. lon. and 18 deg. 30 min. of N. lat. on the gulph of Mexico, 200 miles S. E. of Mexico city, having a very ſecure and commodious harbour, well defended by forts at the entrance. See *Spaniſh* America.

VERAS. A kind of ell, uſed in Portugal for cloths and ſtuffs; being ſomewhat leſs than the Engliſh ell, ſo that 106 veras of Liſbon make but 100 of London.

VERD *Cape*, or *Cape Verd*. A promontory on the weſt coaſt of Africa, ſituated in 18 deg. of W. lon. and 15 deg. of N. lat. 40 miles N. W. of the mouth of the river Gambia.

Cape VERD *Iſlands*. The iſlands of Cape Verd are ſituated between 23 and 27 deg. of W. lon. and between 15 and 18 deg. of N. lat. upwards of 300 miles W. of Cape Verd in Africa: but many of them are only barren rocks. Theſe iſlands were diſcovered in 1460, by Antonio Noel, a Genoeſe, in the ſervice of Portugal; and they have ever ſince been ſubject to that crown; being inhabited by Portugueſe and Negroes: but the latter are the moſt numerous.

The principal iſlands are St. Jago, Bravo, Fogo, Mayo, Bonaviſta, Sal, St. Nicholas, St. Lucia, St. Vincent, Santa Cruz, and St. Antonio.

St. Jago is the largeſt of all, being the reſidence of the governor, who is a kind of a viceroy, inveſted with the command over all the poſſeſſions of the crown of Portugal, from Cape Verd to the cape of Good Hope. It is ſituated in 24 deg. of W. lon. and 15 deg. of N. lat. 30 miles W. of Cape Verd, being about 150 miles in circumference. It is a mountainous and rocky country: but has ſome fruitful vallies in it productive of Indian corn, cocoa-nuts, oranges, and other tropical fruits: with plenty of roots and garden-ſtuffs, hogs, and poultry; as alſo ſome of the prettieſt kind of green monkies, with black faces: ſo that Eaſt Indiamen outward-bound frequently furniſh themſelves with water and proviſions at this iſland.

The iſland of Fogo is a volcano; and great quantities of ſalt are made in ſome of the other iſlands, but particularly in Sal.

Raw hides, eſpecially goats ſkins, are one of the beſt branches of trade in theſe iſlands; all of them being well ſtocked with theſe animals; but particularly the iſland of Mayo, wherein are yearly killed to the amount of 6000 beaſts.

Some wild bull and cow-hides are alſo brought from theſe iſlands to Portugal, where they are uſed in their manufactures, or are ſold to ſtrangers.

Tame cattle are alſo fed there in abundance, whoſe fleſh is ſalted and ſent to the Brazils, together with the fiſh, of which there are great numbers caught on the coaſts of theſe iſlands, and cured with their ſalt.

The iſlands of St. Vincent and Antonio alſo carry on a trade which is pretty lucrative, in the oil they extract from the tortoiſes, or turtles, that reſort theſe parts in a certain time of the year; as likewiſe in buck-ſkins, which they dreſs after the manner of Spain and Portugal.

Laſtly, rice, millet, Turkey corn, oranges, citrons, ananas, and ſeveral other delicious fruits; as alſo a great number of tame and wild fowl, ſerve the inhabitants for food; and the ſhips that touch there for refreſhments.

VERDEGREASE, or *Verdegris*. A kind of ruſt of copper; of great uſe among painters, for a green colour.

VERDEGREASE is prepared from copper plates, and rape or huſks of grapes well ſaturated with wine, put up in earthen pots, and then ranged *ſtratum ſuper ſtratum*; that is, firſt rape, then copper, and ſo alternately. When the pots are filled, they are ſet in a cellar; whence, after ſome time, they are taken out, to gather the verdegreaſe, which is a green ruſt covering the plates all over.

Some talk of verdegreaſe made with vinegar, and other corroſive ſalts; but it is a miſtake; the beſt wine being nothing too good for the purpoſe. Accordingly, the greateſt part of the verdegreaſe conſumed in Europe, is made in Languedoc, of the wines of that country; and is exported in cakes of about 25 pounds weight each. There is but little quite pure: to be good, it muſt be very dry, of a deep green, and pretty clear of white ſpots.

The apothecaries uſe to diſſolve verdegreaſe in diſtilled vinegar, and then filtrate and evaporate it in the cellar; when it ſhoots into cryſtals, which are uſed among ſurgeons, to cleanſe old ulcers, and eat off fungous fleſh.

VERDITER. A kind of mineral ſubſtance, ſometimes uſed by painters, for a blue; but more uſually mixed with yellow, for a green colour.

Verditer ought to be made of the *lapis armenus*, or, at leaſt, of an earthy ſubſtance much like it, brought from the mountains of Hungary, only prepared by powdering it and cleanſing it by lotion. See *Armenian* Stone.

But this ſtone and earth are very rare; and the verditer commonly uſed is only a factitious ſubſtance. The proper way of preparing it we are told, is by caſting wine or water upon new copper, juſt as it comes red hot out of the furnace, and catching the ſteams which riſe from it upon copper plates: though others ſay, it is prepared by diſſolving copper plates in wine, much after the manner of verdegreaſe.

The method of practice in England is ſaid to be as follows: into a hundred pounds weight of whiting, the refiners pour their copper water, and ſtir them together every day for ſome hours, till the water grows pale; then they pour that away, and ſet it by for farther uſe; pouring on more of the green water, and ſo till the verditer is made; which being taken out, is laid on large pieces of chalk in the ſun, till it is dry for the market. The water mentioned to be poured off from the verditer, which remains at the bottom of the tub, is put into a copper, and boiled till it comes to the thickneſs of water-gruel; when it conſiſts principally of ſalt-petre reduced, moſt of the ſpirit of vitriol being gone with the copper into the verditer; and a diſh full of this being put into the other materials for *aqua fortis*, is re-diſtilled, which makes what they call

call a double water, and is near twice as good as that made without it.

VERDUN. A city of Germany, in the duchy of Lorrain, ſituated on the river Maes, 40 miles N. W. of Nancy; ſubject to France.

VERJUICE. A juice, or liquor drawn from ſour grapes, or apples, unfit for wine, or cyder; or from ſweet ones, while yet acid, and unripe. See *Cyder*.

Its chief uſe is in ſauces, and ragouts; tho' it is alſo an ingredient in ſome medicinal compoſitions; and is uſed by wax-chandlers to purify their wax. It has its name from a large ſort of grape called verjus, or bourdelas; which is ſaid never to grow perfectly ripe; or rather, which, in its utmoſt maturity, is too auſtere and ſour to be uſed in wine: whence it is commonly turned into verjuice; tho' in France all unripe grapes are denominated verjus. There is alſo a tolerable verjuice made of crabs, gathered and laid into a heap to ſweat; when ſeparated from the ſtalks and filth, and then ſtamped, or ground; after which, the crab-maſh is put into a hair-bag, and ſqueezed in a preſs, the juice barelled up cloſe, and ſet in a warm place to work for 10 or 12 days.

VERMICELLI, or *Vermichelly*. A kind of meſs, prepared of flour, cheeſe, yolks of eggs, ſugar, and ſaffron; reduced into little long ſlices, in threads, like worms, by forcing it with a piſton, thro' a number of little holes in the end of a pipe, made for that purpoſe; being firſt brought from Italy, where it is in ſuch great vogue, that it is in effect the great regale of the Italians. Other nations are not ſo eaſily brought into the taſte of it; but it is chiefly uſed in ſoups and pottages, to warm the ſtomach and provoke venery.

VERMILLION. A bright, clear, red colour, in great eſteem among the ancients, under the denomination of minium. There are two kinds of vermillion; the one natural, the other factitious. The natural is found in ſome ſilver mines, in form of a ruddy ſand; which they prepare and purify by ſeveral lotions and coctions. The factitious is made of artificial cinnabar, ground up with white wine, and afterwards with the whites of eggs: in which ſtate it is made into cakes, and left to dry. To fit it for uſe, they grind it up a ſecond time with water and whites of eggs. To purify and heighten its colour, ſome grind it up with urine, or ſpirits of wine, to which a little ſaffron is added. See *Cinnabar*.

Some alſo pretend to make vermillion of lead, burnt and waſhed; or of ceruſſe, rubified by fire: tho' theſe are not properly denominated vermillion, but red lead. See *Lead*.

This laſt, however, ſeems to be the artificial minium of the ancients; and, accordingly, apothecaries, and painters, ſtill give it the name to enhance the price.

We have two kinds of vermillion from Holland; the one of a deep red, the other pale; but it is the ſame matter at bottom; the difference of colour only proceeding from the cinnabar being more or leſs ground: when the vermillion is pale, it is fine ground, and this is preferred to the coarſer and redder. It is of conſiderable uſe among painters in oil and miniature; and likewiſe among the ladies, as a fucus, or paint, to heighten the complexion of ſuch as are too pale.

VERMILLION, is ſometimes alſo, tho' improperly, uſed for what we otherwiſe call kermes, or ſcarlet grain. See *Kermes*.

VERNISH. See *Varniſh*.

VERSSINE. A corn meaſure, uſed in ſome parts of Savoy, weighing about 42 lb. avoirdupois.

VERTEL, is a term at Heidelberg for the liquid meaſure, which is called *fertel* in all other parts of Germany. See *Fertel*.

VERTICAL *circle*, in aſtronomy, is a great circle of the ſphere, paſſing through the zenith, and nadir; and any other given point on the ſurface of the ſphere: the vertical circles being alſo called azimuths. The meridian of any place is a vertical circle; and all the vertical circles interſect each other in the zenith and nadir.

The uſe of the vertical circles, is to meaſure the height of the ſtars, and their diſtances from the zenith, which is reckoned on theſe circles; and to find their eaſtern and weſtern amplitude, by obſerving how many degrees the vertical, wherein the ſtar riſes or ſets, is diſtant from the meridian.

VERTICITY, is that property of the loadſtone, whereby it turns or directs itſelf to ſome peculiar point: but the attraction of the magnet was known long before its verticity.

VERTILLAGE, in agriculture, the tilling, or preparing of ground to receive the ſeed; by turning, ſtirring, or toſſing it.

VESSEL, in navigation, is a name common to all ſorts of ſhipping; that is, all floating machines, or vehicles that move in the water. See *Ship*.

VESSELS are frequently diſtinguiſhed in two general claſſes; firſt high-bottomed or decked veſſels; which are thoſe that move wholly with wind and ſail, and live in all ſeas, as pinks, galleons, and ſhips. See *Sailing*.

2. And flat-bottomed veſſels, which go both by oars and ſails; as boats, galleys, praams, wherries, and the like.

Floating VESSELS, are uſually diſtinguiſhed into boats, lighters, barges, barks, fiſhing-veſſels, ſhips of trade, and veſſels of war; of each whereof there are various kinds and denominations.

VESSELS *of war*, are a three decked ſhip, firſt and ſecond rate; a frigate, or two-decked ſhip, third, fourth, and fifth rate; a one decked ſhip, ſixth rate; a bomb-veſſel, a fire-ſhip, a ketch, and a machine-veſſel, or ſmoaker.

A veſſel is ſaid to be of three or four hundred ton, meaning that it will carry 3 or 400 times 2000 lb. wt: or, that when immerged in water, it poſſeſſes the ſpace of 3 or 400 ton of water, which is equal to the weight of the veſſel, and all the loading it can carry.

A veſſel is ſaid to draw 10 or 15 feet of water; meaning, that when loaden it ſinks ſo deep under water.

The figure of veſſels is a thing of great importance, with regard to their motion, and ſailing. In determining what form is moſt commodious, the new doctrine of infinites becomes of apparent ſervice to navigation and commerce. A body moving in an immoveable fluid, is obliged to ſever the parts thereof; and they reſiſt ſuch ſeparation. Now ſetting aſide a certain tenacity, whereby they are, as it were, glued together, and which is different in different fluids, the whole force of the reſiſtance depends on that of the ſhock, or impulſe: for a body that is ſtruck, ſtrikes at the ſame time; but a perpendicular ſtroke is that a liquid reſiſts the moſt, as being the greateſt; and for a body to move freely therein, it muſt be of ſuch a figure, as to preſent itſelf as obliquely as poſſible. If it was triangular, and moved with the point foremoſt, it is certain all its parts would ſtrike the fluid obliquely; but they would all ſtrike with the ſame obliquity: and it were more advantageous, that each ſhould ſtrike more obliquely than its neighbour. Now ſuch a perpetual augmentation of obliquity, can no where be had in a curve line; each point whereof is conſidered as an infinitely ſmall right line, always inclined to the other little right lines contiguous to it. To find what curve it is whoſe perpetual change of obliquity, or inclination in all its parts, renders it, of all others, the fitteſt to divide the fluid eaſily; is a problem much more difficult than it appears to be; and, in effect, only to be ſolved by the new geometry; the ſolution being firſt given by Sir Iſaac Newton, in his inveſtigation of the ſolid of the leaſt reſiſtance.

That author, however, did not publiſh his analyſis; yet the Marquis d'Hopital hit upon it; and afterwards M. Fatio reſolved the ſame problem, tho' by a much longer and more perplexed way.

Book of VESSELS. See *Book*-keeping.

VESSEL, is alſo a thing proper to hold or contain liquor: thus, a ton and hogſhead are veſſels, fit to contain ale, wine, or other liquids.

The chemiſts uſe a great variety of veſſels in their operations, as matraſſes, pelicans, retorts, and receivers.

VETCHES. A particular ſort of pulſe, commonly called chick-peaſe. See *Corn*.

VEZ-CABOULI. A ſort of medicinal root, which has alſo ſome uſe in painting; and is brought from Surat in the Eaſt Indies.

VIANA. A port-town of Portugal, ſituated in 9 deg. 15 min. of W. lon. and 41 deg. 40 min. of N. lat. 36 miles N. of Oporto.

VICE, in ſmithery, and other arts employed in metals, is a machine, or inſtrument, ſerving to hold faſt any thing they are at work upon; whether it is to be filed, bent, or rivetted. To file ſquare, it is abſolutely neceſſary the vice be placed perpendicular, with its chaps parallel to the work bench.

The parts of the vice are, the face or plane, which is its uppermoſt part; the chaps, which are cut with a baſtard cut, and well tempered; the ſcrew-pin, cut with a ſquare ſtrong worm; the nut or ſcrew box, which has a ſquare worm, and is brazed into the round box; the ſpring which throws the chaps open; and the foot on which the whole is mounted.

Hand-VICE, is a ſmall kind of vice, ſerving to hold the leſſer works in, that require often turning about. Of this there are two kinds, the broad chapt hand-vice, which is that commonly uſed, and the ſquare-noſed hand-vice, ſeldom uſed but for filing ſmall round work.

VICE, is alſo a machine uſed by the glaziers, to turn, or draw lead into flat rods, with grooves on each ſide, to receive the edges of the glaſs.

There are ſome of theſe vices double, and that will draw two leads at once; which have three wheels. Some glaziers will turn lead of different ſizes in the ſame vice, by changing their cheeks for each ſize. With another pair of ſpindles, whoſe nuts almoſt meet, they turn lead for tiers; which, when it comes out of the vice, is almoſt cut aſunder, in two thickneſſes, eaſily to be parted. Before the invention of this vice, which is but of late, they uſed a plane; accordingly, in all the ancient windows, we find the lead planed and grooved that way.

VICE, is alſo uſed in the compoſition of ſeveral ſorts of words, to denote the relation of ſomething which comes inſtead, or in the place of another: in this ſenſe the word is Latin, *vice*, ſtead, place, or turn.

VICE *admiral*, is one of the three principal officers of the royal navy, who commands the ſecond ſquadron, and has his flag ſet up in the fore-top of his ſhip. See *Admiral*, and *Navy*.

VICE-*conſul*. An officer who exerciſes the functions of conſul, either with his orders, or in his abſence.

There are ſeveral port-towns of the Levant, and ſome maritime parts of Europe, where European nations keep vice-conſuls; which depend uſually on the importance of the place, and the commerce carried on there.

VICE-*doge*, is a counſellor of Venice, who repreſents the doge when ſick or abſent; that the ſeignory may never be without a chief.

VICE-*roy*. A governor of a kingdom, who commands therein, in the name and ſtead of a king, with full and ſovereign authority.

VICTUALLER. One who contracts or undertakes to provide food and other neceſſaries for a fleet: alſo one that keeps an ale-houſe, or public-houſe.

VICTUALLING-*Office*, is an office on the eaſt-ſide of little Tower-hill, London, and is under the management of ſeven commiſſioners, who tranſact all affairs belonging to the victualling of the royal navy: in which is the biſcuit bake-houſe, and ſtore-rooms of very large dimenſions; the ſlaughter-houſe for oxen and hogs; and the coopery, wherein the caſks for ſea-ſtores are made.

VIGO. A port-town of Spain, in the province of Galicia, ſituated in 9 deg. 18 min. of W. lon. and 42 deg. 15 min. of N. lat. on a fine bay of the Atlantic ocean, which forms a capacious harbour, 70 miles S. E. of Cape Finiſterre, and 50 S. of Compoſtella. See *Spain*.

VIGONE, or *Vigogne*, called by the Spaniards *Vicunna*, is an animal of the ſize of a goat, and figure of a ſheep, found in the mountains of Peru, from Arica to Lima.

The largeſt of them are uſed by the Spaniards for beaſts of burden, and each may carry to the amount of 125 lb. Their wool is brown, or aſh-coloured, ſometimes intermixed with white ſpots; being uſed by the American and European Spaniards for the manufacture of ſeveral woollen ſtuffs; and ſometimes by the French for the making of hats.

Beſides their wool, a much eſteemed bezoar is found in their ſtomach.

VIKIL. A name given by the Perſians to the agents which they employ in foreign countries, for the facilitating of trade.

VILLA-FRANCA. A port-town of Italy, in the province of Piedmont, and county of Nice, ſituated in 7 deg. 8 min. of E. lon. and 43 deg. 45 min. of N. lat. 3 miles E. of Nice, and 40 S. of Coni, ſubject to the king of Sardinia.

VILLAGE, or *Vill*. An aſſemblage of houſes, inhabited chiefly by peaſants and farmers; having uſually a church, but no market. The want of a market diſtinguiſhes a village from a town, as the church does from a green or ſtreet. See *Town*.

VILLAN. A ſort of cotton, brought from the Levant, particularly from Aleppo.

VILLA-RICA. A port-town of Mexico in America, ſituated in 100 deg. of W. lon. and 20 deg. of N. lat. on the gulph of Mexico, 200 miles E. of the city of Mexico.

VILLA-VICIOSA. A port-town of Spain, in the province of Aſturia, ſituated in 6 deg. 6 min. of W. lon. and 43 deg. of N. lat. on the bay of Biſcay, 22 miles N. E. of Oviedo.

VINCENT *Cape*, or *Cape Vincent*. The moſt S. W. promontory of Portugal, ſituated in 10 deg. of W. lon. and 36 deg. 55 min. of N. lat. 25 miles W. of the port town of Lagos.

VINCENT, *St*. One of the neutral Caribbee iſlands, ſituated in 61 deg. of W. lon. and 13 deg. of N. lat.

VINCENT, *St*. is alſo one of the Cape Verd iſlands. See Cape *Verd* Iſlands.

VINDEMIATING. The gathering of grapes, or other ripe fruits, as apples, pears, and cherries.

VINE. A noble plant, or ſhrub, of the reptile kind, famous for its fruit, or grapes, and for the liquor they afford. See *Wine*.

The kinds of vines are almoſt infinite; denominated either from the ſoil, and place where they grow; as the Bourgignon, Bourdelas, Italian, Mantua vine, and the like; or from the form, colour, and taſte of their grapes; as the acorn, apricot, damaſk, birds-bill, and muſcadine vine. Gardeners find that vines are capable of being cultivated in England, ſo as to produce great quantities of grapes; and thoſe ripened to ſuch a degree, as may afford a good ſubſtantial vinous juice. Witneſs the vineyards in Somerſetſhire; particularly that famous one at Bath. In effect, it does not ſeem ſo much owing to the inclemency of our Engliſh air, that our grapes are generally inferior to thoſe of France, as to the want of a juſt culture. Thoſe fitted to the Engliſh climate, Mr. Mortimer finds to be the ſmall black grape, the white muſcadine, parſley-grape, muſcadilla, white and red Frontigniac. Mr. Bradley recommends the July grape, the early ſweet water grape, lately brought from the Canaries, and the arbois, or French ſweet water grape: all which, if well managed, and the weather favourable, are ripe by the middle of Auguſt. He alſo recommends the claret and Burgundy grapes.

The beſt ſoil for wines, according to Mortimer, is the hotteſt gravel, ſand, or dry rocky ground; provided it be well ſhaded and watered. But at firſt planting, Mr. Bradley recommends chalky hills as proper for vines.

To mend the ſoil that wants theſe qualities, it is good to throw in the rubbiſh of old buildings, well mixed with twice as much earth, and ſifted about the roots of the vines.

Vines are propagated either by layers or cuttings; that is, either by laying down the young branches, as ſoon as the fruit is gathered, or by making plantations of ſlips and cuttings at the ſame time. Mr. Mortimer ſays, this may be done any time in the winter before January; tho' Bradley ſays he has done it with ſucceſs in March and April.

VINEGAR. An agreeable, acid, penetrating liquor, prepared from wine, cyder, beer, and other liquors; of conſiderable uſe, both as a medicine and a ſauce.

Wine, and other vinous liquors, are ſaid to gain a grateful ſharpneſs, that is, to become vinegar, by having their ſalts

ſalts exalted by inſolation, or other means; and their ſulphurs weakened and depreſſed. Others aſcribe the converſion of vinous liquors into vinegar, by grinding or ſharpening the longitudinal particles thereof; by which means, they become more ſharp and pungent.

Method of making cyder VINEGAR. The cyder, the meaneſt of which will ſerve the purpoſe, is firſt to be drawn off fine into another veſſel, and a quantity of the muſt, or pouz of apples to be added; the whole is ſet in the ſun, if there be a conveniency for the purpoſe; and at a week or nine days end it may be drawn off.

Method of making beer VINEGAR. Take a middling ſort of beer, indifferently well hopped; into which, when it has worked well, and is grown fine, put ſome rape, or huſks of grapes uſually brought home for that purpoſe; maſh them together in a tub; then letting the rape ſettle, draw off the liquid part, put it into a caſk, and ſet it in the ſun as hot as may be; the bung being only covered with a tile, or ſlate ſtone: and in about 30 or 40 days it will become a good vinegar, which may paſs in uſe as well as that made of wine, if it be refined and kept from turning muſty. Or thus; to every gallon of ſpring water, add three pounds of Malaga raiſins; which put into an earthen jar, and place them where they may have the hotteſt ſun from May to Michaelmas: then preſſing all well, turn the liquor up in a very ſtrong iron-hooped veſſel, to prevent its burſting: it will appear very thick and muddy, when newly preſſed; but will refine in the veſſel, and be as clear as wine. Thus, let it remain untouched for three months, before it is drawn off, and it will prove excellent vinegar.

To make wine VINEGAR. Any ſort of vinous liquor mixed with its own fæces, flowers, or ferment, and its tartar firſt reduced into powder; or elſe the acid and auſtere ſtalks of the vegetable from whence the wine was obtained, which hold a large proportion of tartar; and the whole being kept frequently ſtirring in a veſſel which has formerly held vinegar, or ſet in a warm place full of the ſteams of the ſame, will begin to ferment a-new conceive heat, grow ſour by degrees, and ſoon after turn into vinegar. The remote ſubjects of acetous fermentation, are the ſame with thoſe of the vinous; but the immediate ſubjects of it, are all kinds of vegetable juices, after they have once undergone that fermentation which reduces them into wine: for it is abſolutely impoſſible to make vinegar of muſt, the crude juice of grapes, or other ripe fruits, without the previous aſſiſtance of vinous fermentation.

The proper ferments for this operation, whereby vinegar is prepared, are, 1. The fæces of acid wines. 2. The lees of vinegar. 3. Pulveriſed tartar; eſpecially that of Rheniſh wine, or the cream or cryſtals thereof. 4. Vinegar itſelf. 5. A wooden veſſel, well drenched with vinegar, or one that has been long employed to contain it. 6. Wine that has often been mixed with its own fæces. 7. The twigs of vines, and the ſtalks of grapes, currants, cherries, or other vegetables of an acid, auſtere taſte. 8. Bakers leaven, after it is turned acid. 9. All manner of ferments, compounded of thoſe already mentioned.

VINEGAR is no production of nature, but a creature of art; for verjuice, the juices of citrons, lemons, and the like native acids, are improperly ſaid to be natural vinegar; becauſe, when diſtilled, they afford nothing but vapid water: whereas it is the property of vinegar to yield an acid ſpirit by diſtillation.

Method of making VINEGAR *in France.* The French uſe a method of making vinegar different from that above deſcribed. They take two very large oaken veſſels, the larger the better, open at the top; in each whereof they place a wooden grate within a foot of the bottom: upon theſe grates, they firſt lay twigs, or cuttings of vines, and afterwards the ſtalks of the branches, without the grapes themſelves, or their ſtones; till the whole pile reaches within a foot of the brim of the veſſels: after which they fill one of theſe veſſels with wine to the very top, and half fill the other; then, with liquor drawn out of the full veſſel, fill up that which was only half full before; daily repeating the ſame operation, and pouring the liquor back from one veſſel to the other; ſo that each of them is full, and half full by turns. When this proceſs has been continued for two or three days, a degree of heat will ariſe in the veſſel which is then but half full, and increaſe for ſeveral days ſucceſſively, without any appearance of the like in the veſſel which happens to be full during thoſe days; the liquor whereof will ſtill remain cool: and as ſoon as the heat ceaſes in the veſſel that is half full, the vinegar is prepared; which in the ſummer happens on the fourteenth or fifteenth day from the beginning: but in winter, the fermentation proceeds much ſlower; ſo that they are obliged to forward it by artificial warmth, or the uſe of ſtoves. When the weather is exceeding hot, the liquor ought to be poured off from the full veſſel into the other twice a day; otherwiſe the liquor would be overheated, and the fermentation prove too ſtrong; whence the ſpirituous parts would fly away, and leave a vapid wine, inſtead of vinegar, behind. The full veſſel is always to be left open at the top: but the mouth of the other muſt be cloſed with a cover of wood, the better to keep down and fix the ſpirit in the body of the liquor; for otherwiſe it might eaſily fly off in the heat of fermentation. The veſſel that is only half full ſeems to grow hot, rather than the other, becauſe it contains a much greater quantity of the vine-twigs and ſtalks than that, in proportion to the liquor; above which the pile riſing to a conſiderable height, conceives heat the more, and ſo conveys it to the wine below.

French vinegar, imported to London by the Engliſh, pays 27 l. 10 s. 11 d. and into the other ports 26 l. 4 s. 6 d. *per* ton, but imported by foreigners into London, they pay 28 l. 17 s. 3 d.; and in the other ports, 27 l. 10 s. 11 d. Spaniſh and Portugal vinegars, imported to London by Engliſh veſſels, pay 12 l. 10 s. 11 d. and in the other ports 11 l. 4 s. 6 d. *per* ton, but the ſame vinegars imported to London by foreign veſſels, pay 13 l. 17 s. 3 d. and in the other ports 12 l. 10 s. 11 d. Though as to cyder and perries the importation is not conſiderable.

VINEGAR *of antimony*, is an acid ſpirit, drawn by diſtillation from the marcaſite of antimony. See *Antimony*.

Its uſe is commended in continued and malignant fevers: the apothecaries have likewiſe a kind of theriacal vinegar, *acetum theriacale*, made of Venice treacle digeſted in wine vinegar.

VINEYARD. A plantation of vines; for which the beſt ſituation is on the declivity of a hill, lying to the ſouth.

The vine is propagated by ſlips, layers, or ſuckers, planted in a nurſery, and thence tranſplanted, about February, into the vineyard. As to the ſoil, it is agreed nothing can be too dry for them: and as to the ſorts of vines, none but the forward ones ought to be planted in England. Theſe are found to ripen very well in open borders, without walls. See *Vine*.

VINTAGE. A crop of wine, or what is got from the vines each ſeaſon. See *Wine*.

The word is alſo uſed for the time or ſeaſon of gathering or preſſing the grapes. In France a decree or ordinance of a proper judge, and a ſolemn publication thereof, are required, before the vintage can be begun.

VINTIN. A ſmall ſilver coin, or rather of billon, ſtruck and current in Portugal, and worth 20 reis, whence its name of vintin; being equal to $\frac{17}{20}$ d. ſterling.

VINTIN, is alſo a money of accompt, uſed in ſeveral parts of the Eaſt Indies, and of two ſorts; the one of good, and the other of bad alloy, which latter is by one fifth leſs than the former. Four of good alloy, or five of bad make the tanga. Fifteen good baſarucos, or 18 of bad make the vintin, taking the good baſaruco on the footing of 2 Portugueſe reis.

VINTNER, or *Taverner*. A retailer of wine; or one who keeps a tavern, or houſe for perſons to drink wine in.

VINTNERS *company of London*, was anciently called merchant-wine-tunners of Gaſcoyne, and conſiſted of two ſorts of dealers; the Veneatrii, and the Tabernarii; the former whereof were merchant-importers, and the latter retailers, who either kept taverns or cellars. Several authors have vainly imagined, that the craft of vintners was incorporated by Edward III. which miſtake ariſes

from his charter granted them in the 38th of his reign, dated the 15th of July 1365, for their carrying on an exclusive trade to Gascoyne, for the importation of wines.

This company was incorporated by letters-patent of the 15th of Henry VI. in 1437, by the name of The master, wardens, freemen, and commonalty of the mystery of vintners of the city of London; but without a power of making by-laws: however, they had a coat of arms granted them by Clarencieux king at arms, in the year 1442.

They consist of a master, three wardens, 28 assistants, and a livery of 194 members, whose fine is 31 l. 13 s. 4 d. to whom belongs a stately hall in Thames-street, to transact their affairs in. They are likewise possessed of a very considerable estate, out of which is annually paid to charitable uses about 600 l.

VINUM, in medicine, is particularly applied to medicated wines; that is, medicinal preparations, whereof wine is the basis; such as the

VINUM ABSYNTHITES, or *Wormwood-wine*, made of the great or little absynthium, by taking the apices, or tops of the flowers, putting them in a sacculus or bag, and suspending it in the middle of a vessel of wine; which fermenting extracts the taste, smell, and virtues of the wormwood.

VINUM *aromaticum*, made by infusing aromatics, or spices, in new wine, or must.

VINUM *Cydonites*. Quince wine, made of slices of that fruit, steeped in must, or new wine.

VINUM *Emeticum*. Emetic wine, is wine wherein the glass, or regulus of antimony, or *crocus metallorum*, has been steeped.

It only takes a certain degree of efficacy from the matter, nor is it found any stronger at three months end, than at the end of eight days; tho' it purges both upwards and downwards.

VINUM *Hippocraticum*, or *Hippocras*, so called of *manica Hippocratis*, or Hippocrates's sleeve, thro' which it is strained, is a sort of spiced wine, wherein sugar and spices have been steeped for some time.

VINUM *Marinum*. Sea-wine, made by casting sea-water on the grapes in the vat.

VINUM *Picatum*. Pitched wine, made of pitch infused in must.

VINUM *Rosatum*. Rose-wine, made by steeping roses for three months in wine.

VINUM *Strobilites*, or pine-apple wine.

VINUM *Hyssopites*. Hyssop wine.

VIOL. A musical instrument, of the same form with the violin; and struck like that with a bow. See *Violin*.

There are viols of various kinds; the first and principal is the bass-viol, called by the Italians, *viola di gamba*, or the leg-viol, because held between the legs; which is the largest of all; and mounted with six strings. Its neck is divided into half notes, by seven frets fixed thereon: its sound being very deep, soft, and agreeable.

VIOL, is also a term among mariners; when a hawser, or strand-rope, is bound fast with nippers to the cable, and brought to the jeer-capstan, for the better weighing of the anchor, where the main capstan proves insufficient.

VIOLET. A small flower of a very agreeable smell, cultivated in gardens, or found without culture in groves and meadows, and too well known to require a description. Druggists and apothecaries use it for the composition of conserves and syrops.

VIOLET is also a colour, mixed with blue and red, much resembling the flower.

VIOLIN, or *Fiddle*. A musical instrument, mounted with four strings, or guts; and struck, or played with a bow. It consists, like other instruments, of three parts; the neck, the table, and the sound-board.

VIPER, in natural history. A kind of serpent, famed not only for the exceeding venomousness of its bite, which is one of the most dangerous poisons in the animal kingdom; but also for the great usefulness of the flesh in medicine; whence vipers come to make a considerable article in several arts.

This remarkable reptile has the biggest and fattest head of all the serpent kind. Its usual length is about half an ell, and its thickness an inch: its snout being not unlike that of a hog. It has sixteen small immoveable teeth in each jaw; besides two other large, sharp, hooked, hollow, transparent, canine teeth, situated at each side of the upper jaw, which are those that do the mischief. These are flexible in their articulation; and are ordinarily laid flat along the jaw, the animal never raising them but when it would bite. Dr. Mead, in his essay on the poison of the viper, says, that the poison in the viper's bag is separated from the blood, by a conglomerate gland, lying in the lateral anterior part of the os sincipitis, behind the orbit of the eye; from which gland is a duct, that conveys the poison to the bags at the teeth, which, he adds, are tubulated for the conveyance and emission of the poison into the wound: though their hollowness does not reach to the apex, or tip of the tooth; but ends in a long slit below the point, out of which the poison is emitted.

Vipers make a considerable article in medicine; for most authors agree, that there is no part, humour, or excrement, not even the gall itself, of a viper, but what may be swallowed without any harm. Accordingly, the antients, and several modern authors, assure us the Indians, at this very day, both of the East and West, eat them as Europeans do eels.

Caro viperina, viper's flesh, either roasted or boiled, the physicians unanimously prescribe as an excellent restorative, particularly in the elephantiasis, incurable consumptions, and leprosy. Dr. Mead thinks they might be a little less sparing in the quantity; and recommends the broth, or the vinum viperinum, that is, wine wherein they have been long infused.

VIPER's *flesh*, is an ingredient in several of the best antidotes, as well as the theriaca andromachi.

The apothecaries also sell the pulvis viperinus, which is only dried vipers reduced into powder, heart, liver, and all, and passed through a sieve. This, we suppose, to heighten the price, they call animal bezoard. See *Bezoard*.

The salts of vipers, whether volatile or fixed, also their fat, or axungia, and their oil chemically drawn, are drugs in good repute.

VIPER-*wine*. See *Wine*.

VIRGIN, is applied, figuratively, to several things that retain their absolute purity, and have never been made use of: thus, virgin-wax, is that which has never been wrought; but remains as it came out of the hive.

VIRGIN-*oil*, is what oozes spontaneously from the olive, without pressing. See *Oil*.

VIRGIN *gold*, is that metal as it is got out of the ore, without any mixture or alloy; in which state it is sometimes so soft, that it will take the impression of a seal. See Virgin *Gold*.

VIRGIN-*copper*, is a native copper found in the mine, and which has never been melted down. See *Copper*.

VIRGIN-*honey*. See *Honey*.

VIRGIN-*quicksilver*, is that found perfectly formed, and fluid, in the veins of the mines, or at least is got through the mineral earth by mere lotion, without fire.

VIRGIN *islands*. Very small islands of the Caribbees, situated in the Atlantic or American ocean, a little to the eastward of Porto Rico, subject to Spain.

VIRGIN-*parchment*, is that made of the skin of an abortive lamb or calf.

VIRGIN-*sulphur*. See *Sulphur*.

VIRIDE *æris*. The same as ærugo. See *Verdegrease*.

VITRIFICATION, or *Vitrifaction*. The art of converting a body into glass; but, of all bodies, fern-ashes, sand, bricks, and pebbles, vitrify the most easily: accordingly it is of these that glass is principally made.

VITRIOL. A mineral substance, composed of an acid salt, intermixed with something metallic; being usually considered as a salt; but is more properly ranked in the class of semi-metals, as having a metallic matter mixed or combined with its salt.

Vitriol is defined by Boerhaave, a saline, metallic, transparent glebe, dissoluble in water, and fusible, and calcinable by fire. It acquires different names, according to

to the different places where it is dug: and the vitriols of thoſe alſo differ from each other in denomination and colour; ſome being white, others blue, and others green. Roman and Cyprus vitriol, for inſtance, are blue, and that of Sweden and Germany greeniſh; beſides which, there is alſo a white kind. White vitriol partakes but little of any metal, blue partakes of copper, and green of iron.

According to Boerhaave, vitriols conſiſt of a metallic part, with a ſulphur adhering, a menſtruous acid, and water. In blue vitriol, the metal wherewith the acid is joined, is copper. In white vitriol, called alſo white copperas, it is mixed with lapis calaminaris, or ſome ferruginous earth, whether intermixed with lead or tin. In green vitriol, the acid is joined with iron.

The antients gave the name calcitis, or calcanthum, to native vitriol; or that which acquires its full perfection in the entrails of the earth, and which is a kind of mineral ſtone, of a reddiſh colour. Of this they obſerved three different ſtates, or transformations; calcitis, in its firſt ſtate, they called miſi; this afterwards turned into melanteria; and that into ſori.

Some moderns take this calcitis to be the ſame with the colcothar brought from Sweden and Germany; the beſt whereof is of a browniſh red colour, and a vitriolic taſte, diſſolves eaſily in water, and, when broke, is the colour of a ſhining copper. See *Colcothar*.

All the other vitriols above named, are really factitious, being only a kind of chryſtals, drawn, by means of water, from a ſort of marcaſite ordinarily found in mines, and called by naturaliſts pyrites, or quis.

Roman vitriol is made by expoſing theſe pyrites to air, till ſuch time as they calcine, and change into a greeniſh acid vitriolic calx or duſt; in which ſtate they are thrown into the water, and are afterwards, by boiling and evaporation, reduced into that kind of chryſtals ſent from Italy.

All the other vitriols are made after the ſame manner, that is, much after the manner as alum is made in England, or ſalt-petre in France.

For green vitriol, they add a great number of pieces of iron to the liquor in boiling, which raiſe a great ebullition. As ſoon as the iron is diſſolved, they evaporate the diſſolution to a certain degree, and ſo let it chryſtallize; the chryſtals being formed, there remains a thick, reddiſh, unctuous ſtyptic, and aſtringent liquor, which M. Geoffroy calls eau mere de vitriol, as containing all the principles of the mineral, though diſunited. The powder of this vitriol is exceeding ſtyptic; being excellent for the cure of wounds, and the ſtopping of blood. Its effects this way have been raiſed by the knavery of ſome, and credulity of others, to a kind of miracle; it being this that makes the baſis of the ſympathetic powder.

The medicinal virtues of vitriol are very great; but all owing to the iron, or other metallic parts mixed with it, and therefore follow the kind of metal: thus, thoſe of green vitriol depend on the ſtypticity or aſtringency of iron, or Mars.

The eau-mere drawn from green vitriol, Mr. Geoffroy obſerves, does not differ any way eſſentially from a great number of preparations, which the chemiſts have given us of vitriol, iron, and the lapis hæmatites, as the fixed and anodyne ſulphurs of vitriol, Mars, and the like; the common baſis of all which is iron exceeding ſubtiliſed and attenuated.

A ſolution of vitriol, mixed with a tincture of galls, becomes inſtantly exceeding black, and this is the common writing ink.

Some naturaliſts hold vitriol to be the root, or matrix of copper; becauſe, in the copper mines, they never dig deeper than the glebe, out of which the copper is drawn.

Vitriol affords ſeveral chemical preparations; as, ſpirit of vitriol, procured by firſt calcining, and then diſtilling it; oil of vitriol, which comes out after the ſpirit, by heightening the fire, whereby that had been raiſed; and what remains after both, is colcothar of vitriol. Tartar of vitriol is had by mixing oil of vitriol with oil of tartar *per deliquium*; a ſalt precipitating at the bottom, which, being ſet to exhale and chryſtallize, is the tartar of vitriol. From the colcothar of vitriol is prepared the ens veneris.

Metallic VITRIOLS. All metals, it is to be obſerved, may be converted into vitriols, by diſſolving them with acid ſpirits, and letting them ſtand to chryſtallize.

Factitious vitriols being only metals diſſolved and chryſtallized in ſaline menſtruums, are frequently called, by way of diſtinction, metallic vitriols, and metallic ſalts.

VITRIOL *of iron*, is a preparation made by diſſolving iron, or ſteel in oil, or ſpirit of vitriol; then evaporating, or drawing off the moiſture, and bringing the matter to chryſtallize, by ſetting it in a cold place; which is alſo called ſal martis, or ſalt of ſteel.

VITRIOL *of Luna*, or *the moon*, is the body of ſilver chemically opened, and reduced into the form of ſalt, by the ſharp points of ſpirit of nitre.

VITRIOL *of Venus*, is a ſolution of copper in ſpirit of nitre, evaporated and chryſtallized, to gain the ſalt, called alſo vitriol of copper.

VITRIOLIC. Something that has the quality of vitriol, or partakes of its nature. In this ſenſe they ſay, vitriolic ſpring, vitriolic ſtone, and vitriolic ſpirits. If iron is thrown into a vitriolic water, and the red ruſt ariſing on the ſurface of the iron is melted down, it will be found real copper: which is an inſtance of the tranſmutation of one metal into another.

VIZIER, or *Vizir*. A prime miniſter to the Eaſtern princes.

VIZAGAPATAN. A Britiſh factory, in India. See *India*.

VIZIR-KAN, is a term at Conſtantinople for a large ſquare building, where cotton cloths are painted and ſold.

ULLAGE, of a cask, is ſo much as a veſſel wants of being full. See *Gauging*.

ULNA. An ell, in meaſure. See *Meaſure*.

ULNA *ferrea*, denotes the ſtandard iron ell, kept in the exchequer. See *Standard*.

ULTRAMARINE. A beautiful blue colour, uſed by painters, and prepared from lapis lazuli; this blue being one of the richeſt and moſt valuable colours uſed in painting. The preparation conſiſts in firſt calcining the lapis in an iron pot or crucible; then grinding it very fine, on a porphyry ſtone; afterwards mixing it up with a paſte made of wax, pitch, maſtic, turpentine, and oil; and at laſt, waſhing the paſte well in clear water, to ſeparate the colouring part from the reſt, which precipitates to the bottom, in form of a ſubtile, beautiful, white powder. The water is then poured off, and the powder at bottom dried in the ſun, which is the true ultramarine.

Thoſe who prepare this colour have uſually four kinds, which they procure by ſo many different lotions; the firſt is ſtill the beſt, and the reſt worſe and worſe to the laſt. There is ultramarine of the firſt kind ſold for 11 l. ſterling an ounce, and of the laſt for about 12 or 15 s. The common opinion concerning its origin is, that the method of making it was firſt diſcovered in England; and that a member of the Eaſt India company having a quarrel with his aſſociates, to be revenged of them, made the ſecret public.

Ultramarine muſt be choſen of a high colour, and well ground, which is known by putting it between the teeth; where if it feels gritty, it is a ſign that the triture is not ſufficient. To know whether it is pure and unmixed, put a litttle of it in a crucible, and heat it red hot; if the powder has not changed its colour after this trial, it is certainly pure: on the contrary, if you perceive any change, or any black ſpecks in it, it is falſified.

Beſide this, there is another kind, called common or Dutch ultramarine; which is only lapis, or ſmalt, well ground, and pulveriſed; the colour whereof, when uſed by the painters, being like that of the true ultramarine, though much leſs valued.

UMBER, among painters. A dry, dusky-coloured earth; which, diluted with water, ſerves to make a dark brown colour, uſually called a hair-colour. It is alſo called umber, from *umbra*, a ſhadow, as ſerving chiefly for the ſhadowing of objects: or rather from Umbria, a country of Italy; whence it is uſed to be brought.

UMPIRE. A third perſon, choſen to decide a controverſy, left to an arbitration, in caſe the arbitrators cannot agree. See *Arbitration*.

UNDER *the ſea*, in the ſea-language. A ſhip is ſaid to be ſo, when ſhe lies ſtill, or waits for ſome other ſhips, with her helm laſhed, or tied up a lee.

UNDER-*currents*, diſtinct from the upper or apparent currents of the ſeas. Some naturaliſts conclude there are in many places under-currents, which ſet or drive a contrary way. See *Current*.

Dr. Smith, in the Philoſophical Tranſactions, brings the hypotheſis of the under-currents, to ſolve that remarkable phenomenon of the ſeas ſetting ſtrongly through the Streights into the Mediterranean, with a conſtant current 20 leagues broad. What ſhould become of the vaſt quantity of water poured in this way, as alſo of that coming from the Euxine, through the Boſphorus into the Helleſpont, and thence into the Archipelago, is a ſpeculation that has long employed the philoſophers. This author's conjecture is, that there is an under-current, whereby a great quantity of water is carried out, as it comes in. To confirm which, he obſerves, that between the north and ſouth foreland, it is either high or low water on the ſhore, three hours before it is ſo at ſea; a certain ſign, that though the tide of flood runs aloft, yet the tide of ebb runs under-foot, or cloſe by the ground. He adds an account from an able ſailor in the Baltic ſound, that going with their pinnace into the middle ſtream, they were carried violently back by the current; but that ſinking a bucket, with a large cannon-bullet, to a certain depth of water, it gave a check to the boat's motion; and, ſinking it ſtill lower, the boat was driven a-head to the windward againſt the upper current, which was not above four or five fathom deep. Though Dr. Halley ſolves the currents ſetting in at the ſtreights, without overflowing the banks, from the great evaporation, without ſuppoſing any under-current.

UNDER-*chamberlains of the exchequer*, are two officers there, who cleave the tallies, and read the ſame; ſo that the clerk of the pell, and the comptrollers thereof, may ſee that the entries are true. See *Exchequer*.

They alſo make ſearches for all records in the treaſury, and have the cuſtody of doomſday-book.

UNDERTAKERS, were antiently ſuch perſons as were employed by the king's purveyors, and acted as their deputies.

But at preſent the name is chiefly uſed for upholders, or perſons who furniſh out funerals; as alſo for ſuch as undertake any great work, as the draining of fens, building of palaces, and the like.

UNDER-TREASURER *of England*, was an officer mentioned in the ſtatute of the 39th of Elizabeth, and whom ſeveral other ſtatutes confound with the treaſurer of the exchequer. See *Exchequer*.

He cheſted up the king's money at the end of every term, noted the content of money in each cheſt, and ſaw it carried into the king's treaſury in the Tower, for eaſe of the lord treaſurer. He alſo, in the vacancy of the lord treaſurer's office, did every thing in the receipt which the lord treaſurer himſelf does. See *Treaſurer*.

UNDERWOOD, is coppice, or any wood that is not accounted timber. See *Timber*.

UNGUENT, or *Ointment*, in chirurgery. A topical remedy or compoſition, chiefly uſed in the dreſſing of wounds and ulcers.

Unguents, liniments, and cerats, are external forms, applied on various parts of the body, both to cure, and to eaſe and relieve them. They only differ from each other in conſiſtence; with regard to which, unguents hold the medium, being ſtiffer than liniments, but ſofter than cerats.

Oils are ordinarily the baſis of all three; to which are added wax, axungia, and ſeveral parts of plants, animals, and minerals; both on account of the virtues they furniſh, and to give a conſiſtence to oils, as alſo to keep them longer on the part, that they may have more time to act. The principal unguents, or ointments, are unguentum roſatum; unguentum album, or white unguent of ceruſs; populneum, made of the buds of the poplar-tree; unguentum apoſtolorum, ſo called from the twelve drugs it conſiſts of, a cleanſer; unguentum baſilicum, a ſuppurative; unguentum ægyptiacum, cauſtic; unguentum aureum, incarnative and cicatriſing; unguentum de apio, mundificative; and unguentum Agrippæ, ſaid to be diſcovered by King Agrippa.

Pomatums are alſo ranked in the number of the unguents. See *Pomatum*.

UNGUIS-*odoratus*. A ſort of ſhell, uſed in medicine, called otherwiſe blata Bizantia.

UNION *fire-office*. See *Inſurance*.

UNITED PROVINCES. The ſeven United Provinces of the Netherlands, conſiſting of Holland, Zeland, Frieſland, Groningen, Overyſſel, Gelderland, with Zutphen, and Utrecht, are bounded by the German ocean, on the north and weſt; by the circle of Weſtphalia, on the eaſt; and by Flanders, Brabant, and the duchy of Cleve, towards the ſouth; lying between 3 deg. 20 min. and 7 deg. 30 min. of E. lon. and between 51 deg. 35 min. and 52 deg. 40 min. of N. lat. being about 150 miles in length, and as many in breadth: but then the Zuyder ſea, which ſeparates North Holland from Frieſland and Overyſſel, takes up a great part of this ſpace; and perhaps, if all their ſeas and lakes within the limits above deſcribed were excluded, the whole country would not appear to be above 100 miles over either way. However, thoſe parts of Flanders and Brabant, which the Dutch have made themſelves maſters of, and lie contiguous to theſe provinces, are a conſiderable enlargement of their dominion.

The rivers which water this country are the Rhine, Leck, Waal, Maes, Iſſel, Leſſer Iſſel, Scheld, and Hont.

The ſeas are either the German or Britiſh ocean, which waſh the Northern and Weſtern ſhores. The Zuyder ſea, encloſed almoſt on every ſide, having the iſlands of Schelling, Ameland, and others, on the north; the provinces of Frieſland and Gelderland, on the eaſt; Utrecht, and part of Holland, on the ſouth; with another part of Holland, and the iſlands of Texel, and Flie, upon the weſt; being about 70 miles in length, and half as much in breadth, exceeding ſhallow, and full of ſands; ſo that the entrance of it at the Texel, and the paſſage over it, is more dangerous than a voyage to Spain. And ſuch is the violence and rage of the ſea, when the wind blows a ſtorm at N. W. if it happens to be a ſpring-tide, that their ſtrongeſt dikes ſometimes give way, and threaten the deſtruction of all the maritime provinces; for the land lies ſo exceeding low and flat, that the flood often appears above it; and were it not for the iſlands of the Flie, the Texel, and Schelling, and ſome ſand-hills, which break the force of the ſea, inundations would be much more frequent than they are. Their dikes, to keep out the ſea, are generally about 27 yards at bottom, and 12 high, made as ſtrong to the landward as wood and ſtone can make them; and, towards the water, they cover them with mats, ruſhes, ſea-weed, and ſometimes with ſail-cloth; but the raging waves often force their way through all.

Their lakes are only leſſer ſeas, ſurrounded by land; of which there are a great many in the United Provinces; the chief whereof is Haerlem Meer, extending almoſt from Amſterdam to Leyden, being 16 or 18 miles long, and about half as broad; but it grows larger every day, by encroaching on the lands contiguous to it.

Their ſeas, rivers, and canals, afford them plenty of fiſh; but there are ſome kinds for which they are obliged chiefly to the coaſt of Britain, particularly herrings, oyſters, and many other kinds of ſhell-fiſh.

Notwithſtanding this country is ſo famous for its multitude of ſhipping, there is ſcarce a good harbour on the coaſt: the beſt is ſaid to be Fluſhing, Helvoetſluys, and Rotterdam. As for Amſterdam, there cannot be a more incommodious haven; being ſtationed in ſo ſhallow a water, that ordinary ſhips cannot come near it unleſs at high-water, nor veſſels of burden without unlading.

Holland

Holland is computed 80 miles long, and 40 broad, making	-	5200 ſquare miles.
Zeland, 30 long, 17 broad	-	510
Utrecht, 30 long, 25 broad	-	750
Gelderland and Zutphen, 50 long, 48 broad	- -	2400
Overyſſel, 60 long, 40 broad		2400
Groningen, 46 long, 24 broad	-	1104
Weſt Frieſland, 40 long, 25 broad		1000
Dutch Brabant, 55 long, 31 broad		1705
Dutch Flanders, 31 long, 13 broad		403
	In all	13472

The moſt conſiderable of the ſeven provinces is that of Holland, which gives its name to the country and the republic.

It is well known, that ſome provinces of the Low Countries, equally affected by the love of their new religion, and that of their antient liberty, united in 1566, for the preſervation of both, and ſoon afterwards reſcued themſelves from the Spaniſh yoke, with the aſſiſtance of England, and the Proteſtant princes of Germany.

From the beginning of the revolt, Philip II. interdicted the confederate-ſtates all ſorts of commerce: but the want he was in of the commodities of the north, for the uſe of his fleets, obliged him to pretend, for a conſiderable time, that he was ignorant of the trade, which the Dutch carried on under the flags of his allies.

But, ſome years before his death, this prince altered his politics; and, after him, Philip III. his ſon and ſucceſſor, purſuant to the laſt views of his father, publiſhed in the month of February, an interdiction of all commerce, under rigorous penalties; which were executed with the greateſt ſeverity.

From hence may be dated the birth of the Dutch commerce, and the moſt ſolid foundation of their power; that is, about the end of the reign of Philip II. and the beginning of that of Philip III. from the year 1594, wherein the firſt aſſociations of the Zeland traders were made, till the year 1602, wherein all thoſe already made incorporated themſelves into one company.

There is ſcarce a mercantile place, ſince that time, to which the Dutch have not extended their commerce, eſpecially ſince the twelve years truce concluded between Spain and them in 1609; as alſo ſince the peace of Munſter, ſigned in 1648, whereby they were acknowledged as free ſtates, and obtained great privileges for their trade from their former maſters.

Three things contribute, in a great meaſure, to maintain the Dutch trade. The firſt is the great credit of the bank of Amſterdam, whoſe fund amounts to upwards of 3000 tons of gold; and whoſe notes and bills are always eſtimated at 1-4th *per cent.* and ſometimes higher, more than the payments in ready money. See *Bank*.

The ſecond thing ſo uſeful to the Dutch trade, is the great number of ſhips which depart every day from all the ports of this ſtate, and which carry ſuch great quantities of merchandiſe to almoſt all parts of the world.

The third is the ſafety wherewith this commerce is carried on, by the convoys the ſtate grants to the merchant-ſhips, which make them reſpected by corſairs and privateers.

A fourth reaſon may be added for the ſucceſs of the Dutch trade, which is, the probity and upright dealing they hold with all their correſpondents, of what nation ſoever. It is true, however, that if this be a praiſe which their traders deſerve in particular; yet their Eaſt India company have ſometimes followed other maxims, and, for the ſake of deſpotiſm, have infringed the moſt ſacred rights of juſtice.

Amſterdam, the capital city of Holland, and of the whole United Provinces, is ſituated in 4 deg. 30 min. of E. lon. and 52 deg. 20 min. of N. lat. on the river Amſtel, and an arm of the ſea called the Wye, a little to the eaſtward of the Zuyder ſea, about 200 miles eaſt of London, 230 N. E. of Paris, and about 400 W. of Vienna.

There is no port in the world where a greater trade is driven on, or where more ſhips enter, and go out, than that of Amſterdam; which is in the form of a creſcent, and may contain about 4000 ſhips, both large and ſmall; the ſmall ones lying along the quays, and the large ones between the piles, which keep them from ſtriking againſt each other in ſtormy weather.

Theſe piles are open in ſeveral parts for the paſſage of veſſels which go to or come from the city; and theſe openings are called *booms*, ſerving as gates to the city on the ſea-ſide, and are barricaded every night with two large poles pointed with iron, to obſtruct the entrance of any thing. In the day-time there are ſome admiralty-officers at the booms, for viſiting all that enters, and goes out.

The commerce of the merchandiſe of the growth of Holland, is but inconſiderable in itſelf; for, excepting its butter, cheeſe, and earthen-ware, few others paſs to ſtrangers.

Before the revocation of the edict of Nantz, and the eſtabliſhment of ſome of the French refugees in the ſeveral towns of the United Provinces, their manufactures conſiſted chiefly in their cloths and linens; but, ſince that time, by the help of theſe refugees, they learned all the French manufactures of gold, ſilver, and ſilk ſtuffs, and others, which they brought to a great degree of perfection; the following being a ſtate of the manufactures eſtabliſhed at Amſterdam, and in its neighbourhood.

At Amſterdam are manfactured gold and ſilver ſtuffs, damasks, brocades, taffeties, mohairs, ſilk ſhaloons, velvets, armoiſins, plain and flowered gauzes; laſtly, all ſorts of other ſilk ſtuffs, formerly for the moſt part manufactured in France and in Italy.

Stockings and caps of ſilk, thread, and wool.

Cloths, ſerges, calimancoes, ſtamines, and camblets; beſides ſeveral other ſtuffs of wool, goat, and camels hair.

Gold, ſilver, ſilk, thread, cotton, and ferret ribbonds.

Hats of all ſorts.

Tapeſtries of moſt kinds.

Printing-houſes for cotton cloths; where the printers boaſt of the ſecret of making as beautiful, and as laſting colours as in the Eaſt Indies and Perſia.

Printing-houſes for books and copper-plates.

All ſorts of dying ſtuffs, particularly for black and ſcarlet.

Gilt leather.

Sixty refining houſes for ſugar.

Other refining houſes for camphor, vermilion, ſulphur, azure, ſalt, borax, and reſin.

Excellent civet; and ſeveral perſons keep the animals there which produce it.

Several manufactures for ſoap, and the bleaching of wax.

Brew-houſes for beer, and other houſes for the preparing of vinegar.

Cord-yards, both for large cables, and other ſorts of cordage.

Several mills for gun-powder, dying ſtuffs, tobacco, bark-liquorice ſtick, corn, fullers work, the ſawing of planks, the ſawing and poliſhing of marble, and the extracting of oil from grain.

An abundance of anchors for the marine are alſo made there; and an incredible number of ſhips of all ſorts and ſizes are built in its docks.

The foundations of Amſterdam are laid upon vaſt piles of timber drove into the moraſs on which it ſtands, at a prodigious expence; the ſtadthouſe alone having about 13,000 piles of wood, to bear up the foundation. The firſt mention of this town in hiſtory is about the year 1500, when it was a poor fiſhing-town: but, in 1585, it appears to have been the chief town of trade in theſe provinces. The houſes are built with brick or ſtones, the ſtreets ſpacious, and well-paved, and through moſt of them run canals planted with trees. The city is computed to be half as large as London, including the fortifications: it contains people of almoſt every nation, and every religion in Europe, who are all tolerated in their reſpective perſuaſions; but only the Calviniſts or Preſbyterians are admitted to any ſhare in the government.

Haerlem, is another large city in the province of Holland, ſituated in 4 deg. 20 min. of E. lon. and 52 deg. 30 min.

of N. lat. 4 miles eaſt of the ocean, and 12 weſt of Amſterdam, near the lake, which from this town is called Haerlem-Meer.

At Haerlem are manuafctured a great number of velvets of all ſorts, pluſh, and ſeveral ſorts of woollen ſtuffs; beſides ribbonds of thread, cotton, ferret, and tapes of all kinds.

This town is in ſome reputation for the bleaching of linen, particularly of ſuch as are diſtinguiſhed by the name of Holland; and its threads are likewiſe in great eſteem for their goodneſs and whiteneſs.

The *Hague*, or *Graven Hague*, that is, Earl's grove, is a town in the province of Holland, ſituated in 4 deg. of E. lon. and 52 deg. 10 min. of N. lat. 2 miles caſt of the ſea, 14 miles north-weſt of Rotterdam, and 9 ſouth-weſt of Leyden; encompaſſed with fine meadows and groves, but no walls, and therefore eſteemed a village; though one of the largeſt and moſt elegant in Europe, enjoying all the privileges of a city of Holland, except that of ſending repreſentatives to the ſtates. It is here that the ſtates of the province of Holland, and the States-General, aſſemble; as well as the council of ſtate, and their ſupreme courts of juſtice. All public affairs are tranſacted here, and foreign miniſters admitted to audience; but it is no ways conſiderable for trade.

Enchuyſen, is a city and port-town of North Holland, ſituated in 5 deg. 10 min. of E. lon. and 52 deg. 45 min. of N. lat. on the Zuyder ſea, 8 miles north-eaſt of Hoorn, and 25 north-eaſt of Amſterdam.

Maeſland-Sluice, is ſituated in 4 deg. of E. lon. and 52 deg. of N. lat. 5 miles ſouth of Delft.

Sluys, is a port-town of Dutch Flanders, oppoſite to the iſland of Cadſant, 10 miles north-eaſt of Bruges, and 21 miles north-weſt of Ghent.

Middleburg, the capital city of the iſland of Walcheren, and of the province of Zeland, ſituated in 3 deg. 30 min. of E. lon. and 51 deg. 30 min. of N. lat. 26 miles north-eaſt of Bruges. It is a large well built city; and, having a communication with the ſea by a navigable canal, has a great foreign trade.

Dort, or *Dordrecht*, is a city in the province of Holland, ſituated on an iſland in the river Maes, 10 miles eaſt of Rotterdam.

Fluſhing, or *Vliſſingen*, is a port-town of the province of Zeland, ſituated on the coaſt of the iſland of Walcheren, 5 miles ſouth of Middleburg, and 14 north-eaſt of Sluys; being a good ſecure harbour, and a city of great foreign trade.

Tervere. A port-town in the province of Zeland, ſituated on the north-eaſt coaſt of the iſland of Walcheren.

Leyden, a city in the province of Holland, is ſituated on the old channel of the Rhine, in 4 degrees of E. lon. and 52 deg. 12 min. of N. lat. 4 miles eaſt of the ocean, and 20 miles ſouth of Amſterdam, It is one of the moſt elegant cities of Holland, having a conſiderable woollen manufacture. There are in it 30 iſlands, 24 canals, 180 ſtreets, and 95 bridges, with an univerſity conſiſting of 2000 ſtudents.

Delft, the capital of Delft-land, in the province of Holland, is ſituated in 4 deg. 5 min. of E. lon. and 52 deg. 6 min. of N. lat. 8 miles north-eaſt of Rotterdam, and 30 ſouth-weſt of Amſterdam. It is about 2 miles in circumference; and the beſt earthen ware is made here, from hence called Delft ware. It has no other conſiderable trade at preſent, but is the retirement of the wealthieſt merchants.

Edam, a town of Holland, ſituated on the weſt-ſhore of the Zuyder ſea, 12 miles N. E. of Amſterdam.

Briel, the capital of the iſland of Voorn, is ſituated in 4 deg. of E. lon. and 51 deg. 50 min. of N. lat. 5 miles north of Helvoetſluys; which is one of the beſt harbours in Holland, and where the Engliſh packet-boat always goes.

Hoorn, is a port-town on the Zuyder ſea, 19 miles north of Amſterdam.

Rotterdam, is a city in the province of Holland, ſituated in 4 deg. 20 min. of E. lon. and 52 deg. of N. lat. on the north-bank of the river Maes, 30 miles eaſt of Amſterdam, and 13 ſouth-eaſt of the Hague. It is a large populous city, and much better ſituated for trade than Amſterdam; for the canals, which run through the city, bring up ſhips to the doors of the merchants; and the Maes is much ſooner free from ice, than the Wye at Amſterdam; on which account the Britiſh merchants reſort to this port more than to the other. There are four Dutch churches in this town, and two others for the Engliſh and Scotch.

The city of Rotterdam has ſcarce any manufactures of its own; but its commerce extends into all the parts of the world, particularly into Normandy in France, England, Scotland, Ireland, Brabant, Flanders, and ſeveral towns of Germany; not to mention the number of herring-buſſes it fits out yearly.

It appears, from what has been ſaid of the natural productions of Holland, and the ſtate of its manufactures, that the Dutch commerce would be inconſiderable, if theſe were the only commodities to keep it on footing. But it may be alledged, that all the commercial parts of the world contribute to the promotion of their trade, and make it in ſome reſpects univerſal.

Their ports, in reality, contain an almoſt incredible number of veſſels; and Sir William Temple, in his curious and exact obſervations on the ſtate of Holland, computes that there are a greater number of ſhipping here than in all the reſt of Europe beſides. However, the ſame author ſpeaks with ſome contempt of all the ports of the four maritime provinces of this republic; in the moſt conſiderable whereof, and the moſt frequented, which is that of Amſterdam, the leaſt ſhips cannot enter but in high water, nor the largeſt without being firſt unloaded, to clear with ſafety the entrance of the Texel, and the paſſage of the Zuyder ſea.

However, this difficulty does not obſtruct the going out from all the ports of theſe provinces, particularly that of Amſterdam; from whence ſhips go in particular for Spain, England, France, Portugal, the Mediterranean, the ports of the Levant, the North, the Baltic ſea, the coaſts of Africa, the iſles and continent of America; and, laſtly, the Eaſt Indies; where being arrived at Batavia, the capital of their commerce in the Eaſt, they divide themſelves on one ſide in the Red ſea, the Perſian gulph, the coaſts of Arabia, and thoſe of the Mogul; and, on the other, towards Japan, China, and all the iſlands of the Indian ocean, where they have factories.

To give ſome idea of the number of ſhips which depart from Holland for all the above mentioned places, it will be ſufficient to obſerve, that from the port of Amſterdam alone upwards of 1500 veſſels ſet ſail, freighted for the North and the Baltic ſea, and that all other foreign trades employ a proportionable number; for a Dutch author aſſerts, that ſometimes more than 1500 buſſes have been ſeen to go out of the ports of Holland in three days; and that the herring-fiſhery uſually employs upwards of 3000 yearly.

Amſterdam is the general ſtaple of all merchandiſes, particularly of thoſe of the Eaſt Indies, Spain, the Mediterranean, and the Baltic.

The navigation of Greenland, and the Frozen ſea, for the fiſhery of whales, and other ſea-monſters found in theſe ſeas, is performed by the inhabitants of Frieſland.

Enchuyſen and Maeſland-Sluice poſſeſs the herring-fiſhery.

Middleburg is the ſtaple for a part of the French wines; as Dordrecht is for that of Rheniſh wine, Engliſh cloths, and other merchandiſe.

The commerce of the Weſt Indies is occupied by the ſhips of Fluſhing.

The commerce of England flouriſhes moſt at Rotterdam; and there is alſo a conſiderable ſtaple of French wines.

Tervere in Zeland is a ſtaple for Scotch merchandiſe.

Several manufactures of wool, ſilk, hair, and even gold and ſilver, make the principal trade of Leyden.

Linens, and ſilk ſtuffs, either plain or flowered, occupy the greater part of the inhabitants of Haerlem.

Delft is noted for its beer, and earthen ware.

Laſtly, Sardam has the greateſt magazines of ſhip-timber and naval ſtores in the world; though a great number of

of veſſels are alſo built in the docks of Amſterdam, Rotterdam, Edam, Briel, Enchuyſen, and Hoorn, not only for the uſe of the country, but alſo to be ſold to ſtrangers.

The moſt neighbouring commerce, and at the ſame time the ſafeſt and moſt commodious for the carriages of the United Provinces, is that carried on with a part of Germany by the Rhine and Meuſe, which waſh their ſtates; as alſo by the Weſer, Ems, and Elbe, not far from the German ocean.

The traffic of the Rhine, alſo including that of the Moſelle and the Maine, by which this great river is increaſed in its courſe, is very conſiderable; Cologne being properly the center of the commerce, and the principal ſtaple of the Rheniſh and Moſelle wines; as alſo of the merchandiſes of Lorrain, and the archbiſhopric of Triers, which the Moſelle croſſes, ſuch as wood, iron-bars, cannons, and cannon-balls.

It is alſo by the Rhine, that the merchandiſe of Mentz and Franconia are carried to be ſold afterwards in the famous fairs held twice a year at Francfort, or which are brought from Nuremberg.

Laſtly, it is by the Rhine that the Dutch have flax, thread, and linens, from the duchies of Juliers and Bergue.

The Meuſe facilitates the commerce of Holland to Liege, which is ſituated on this river; and even to Aix-la-Chapelle, not far diſtant from it. The Dutch have from Liege, ſerges, ſlates, coals, lead, iron, bullets, and cauldrons made at Aix-la-Chapelle out of the copper brought by them to Liege.

Bremen, ſituated 15 leagues from the mouth of the Weſer, is the ſtaple of all the commodities belonging to Heſſe and Brunſwick. It is alſo in this town that the Dutch get carpenters timber, wheat, wool, metals, and beer, which are ſent there from Lower Saxony, Heſſe, Brunſwick, and other parts.

Emdem, the capital of Eaſt Frieſland, ſituated at the mouth of the Ems, is the ſtaple of all the trade of this part of Germany; and the Dutch have from it all the commodities of Weſtphalia, particularly of the biſhopric of Paderborn and Munſter, which conſiſt principally in carpenters timber, wool, linen, oxen, horſes, and the hams which have acquired ſo great a reputation in Europe.

Laſtly, the commerce of the Elbe is one of the moſt conſiderable which the Dutch have in the German ocean.

It is uſually by the way of Hamburg that the Dutch carry on the commerce of Lower Germany; but very often they aſcend as far as Harburg and Magdeburg for wine and wood; purchaſing even in theſe quarters entire foreſts, which they ſell, and with which they ſtock large warehouſes, to uſe them upon occaſion, or as they judge convenient.

Silk and woollen manufactures, haberdaſhery wares, ſpice, drugs, wood for dying, ſugar, cheeſe, herrings, copper, and ribbonds, are the merchandiſe which the Dutch bring to Germany by the five rivers already mentioned.

Antwerp, Bruſſels, and Mechlin, furniſh the Dutch with thread and lace, Ghent and Bruges with linens and hemp, Bruſſels and Oudenarde with tapeſtry, and Liſle with cambricks and barracans. The Dutch give in exchange ſilk, and woollen ſtuffs, drugs, ſpice, and other things.

The commerce of the Dutch to France was formerly very conſiderable, that is, before the two nations were at variance with each other upon account of the triple alliance; and it appears, from the memoir of a Dutch ambaſſador, that they exported yearly from France to the amount of about 1,600,000l. ſterling in French commodities, excluſive of corn; as alſo ſalt, with which they loaded between 5 and 600 ſhips.

See the commerce of Spain *and* Portugal *for that of the Dutch to theſe countries.*

The neighbourhood of England and Holland has always facilitated a conſiderable commerce between the two nations.

The merchandiſe exported from England to Holland are woollen cloths, and ſtuffs; ſilk ſtuffs, and ſtockings both of ſilk and worſted, hats, tin, lead, coal, vitriol, and tobacco; ſugar, clock-work, and other things. Thoſe which paſs from Holland into England are fine linens, ſail-cloth, paper, and ſilk.

The commerce of the North and the Baltic is one of the moſt important the Dutch are engaged in. In other commercial intereſts, they labour only for the reſt of Europe: but in this almoſt every thing regards them; it being from thence that they have corn for their food, and neceſſaries for their navigation; without which neither the ſtate nor private perſons could ſubſiſt.

Before the year 1553, the commerce of Muſcovy was carried on by the way of Narva and Revel, towns of Livonia, ſituated in the lower part of the Baltic. The port of Archangel having been diſcovered by the Engliſh, all the trade of this vaſt empire paſſed into this new port; which had ſeveral conveniencies not found in the two others, particularly upon account of the paſſage of the Sound.

The Dutch being delivered from the expences of a ruinous war, by a twelve years truce with Spain, haſtened to eſtabliſh a commerce with Archangel; and having for ſome time divided it with the Engliſh, who before were the ſole maſters thereof, they concerted matters ſo well, that at preſent they have the beſt part of it in their hands.

About forty ſhips, from 200 to 400 ton, depart annually for Archangel from the ports of Holland, and particularly Amſterdam, to which this trade ſeems more peculiarly appropriated. They are always divided into two fleets; the one, only of 6 or 7 ſhips, which ſet ſail in the month of June, and return in the month of December; and the other of 30 or 32 ſhips, whoſe departure is fixed for the month of July, and their return for the end of October.

Theſe fleets have always a convoy, which the city of Amſterdam gives them, even in the midſt of the moſt profound peace.

The merchandiſes compoſing the cargo of the two fleets are woollen and ſilk ſtuffs, linens, Canada caſtors, paper, hard and haberdaſhery wares, cannons, and other arms, powder, ſulphur, copper, lead, tin, brandy, wine, oil, vinegar, confects, dry fruits, ſaffron, ſugar, ſpice, pepper, herrings of the firſt fiſhing, frankincenſe, copperas, ceruſs, indigo, wood for dying, Ruſſia leather, lace, gold and ſilver thread, and ſilver ſpecie.

The commerce of Norway employs every year upwards of 300 Dutch ſhips, from 4 to 500 tons, but manned only with 10 or 12 men each. The merchandiſe they export for Norway, are ſpice, ſalt, Spaniſh wine, vinegar, brandy, cheeſe, tobacco in rolls, and ſome cloths.

As timber for the building of ſhips makes the moſt conſiderable part of their cargo, they have therefore made ſeveral treaties with the kings of Denmark relative to the commerce of wood; among others that of Chriſtianople, of the 13th Auguſt 1645; and another of the Hague, of the 12th April 1669.

The merchandiſe brought from the Baltic being of a large bulk, the Dutch are obliged to ſend there a great number of ſhips, which depart leſs than half loaded, but return always with a full cargo.

The number of Dutch ſhips employed in this commerce, amount one year with another to about 1000 or 1200.

Several kinds of merchandiſe are proper for this commerce; but as the balance is not equal between the imports and exports, and the conſumption not conſiderable, except that of Dantzick, the ſtaple for the Poliſh commerce, the Dutch are obliged to import a great number of rixdollars for the payment of the overplus.

Next to the commerce of the Eaſt Indies, there is none the Dutch have ſo much at heart as that of the Baltic; and for this reaſon they are very attentive to its preſervation, either by hindering the too firm eſtabliſhment of other nations; or by taking care that the Swedes and Danes, who in ſome reſpects are maſters of the important ſtrait, whereby the Baltic muſt be entered, may blockade it againſt ſtrangers, or impoſe new duties upon the ſhips

trading there; or, laſtly, that the northern nations, who have ports on this ſea, may not themſelves export their merchandiſe to others.

The merchandiſe which the Dutch import to Sweden and Denmark, are ſpice, drugs, Spaniſh and Portugueſe ſalt, ſugar, wine, brandy, linen, woollen and ſilk ſtuffs.

To Pomerania, cloths, wine, cheeſe, ſalt, tobacco, iron, lead, tin, and old rixdollars.

To Dantzick, ſilk ſtuffs of all faſhions, cloths, wood for dying, great quantities of ſpice, drugs, Italian cream of tartar, ſugar, oil, paper, wines of different ſorts, brandy, and French ſalt for Pruſſia.

Laſtly, to Riga, Revel, Narva, and Pernaw, all towns of Livonia, ſalt, ſpice, ſugar, tobacco, French glaſs, and eſpecially a great number of old rixdollars, wherewith they pay for the merchandiſe, not only of this province, but alſo thoſe brought there from Muſcovy, Poland, and Lithuania.

It was only ſince the beginning of the 17th century, that the Dutch traded to the Levant under their own flag; being before obliged to come under thoſe of the French, purſuant to the antient capitulations of that crown with the Grand Signior.

The republic having made particular ones for itſelf with the Porte in 1612, ſet immediately upon improving this branch of trade, which ſeemed ſo important, that the States-General eſtabliſhed a chamber at Amſterdam, to take care of every thing relating to it.

This chamber is compoſed of ſix deputies, and a ſecretary, who are all merchants, and regulate all that concerns the navigation and trade of the Mediterranean; but under the authority of the burgo-maſters.

The republic, which has few other connections with the Porte, than thoſe of its commerce, keeps a miniſter there under the title of reſident, who not only maintains the capitulations of the nation, but alſo decides the differences ariſing among private perſons, and the appeals of the conſuls.

The ſhips which trade directly to the ſtates of the Grand Signior, are uſually 30 or 35 in number; which depart at different times, and in different ſquadrons; but generally with convoys, upon account of the Barbary corſairs.

However, there are ſeveral others freighted for different ports of France, Italy, and Barbary; where they take in the merchandiſe proper for them, and continue their courſe to the Levant, where they ſell them, either upon their own account, or that of French and Italian merchants, for whom they have freighted, and with whom they afterwards divide the returns belonging to each perſon.

The ſhips fitted out in Holland for the Mediterranean, have not leſs than 20 or 26 pieces of cannon, and 60 or 70 men to each ſhip; and the convoys are uſually ſhips of 50 or 60 guns, each manned with 100 or 170 men.

The fleets for the port-towns of the Levant, uſually touch at Leghorn for refreſhments, and piaſters, which are furniſhed by the Genoeſe; but they go alſo pretty often for that coin to Cadiz.

The Dutch trade at Smyrna is more conſiderable than that of any other European nation; but elſewhere it is little or nothing. One of their greateſt profits conſiſts in the ſilver they bring there, as crowns, half-crowns, teſtons, and pieces of 15 ſols Dutch coin; in which their gain is great, becauſe the metal is of baſe allay, and the ſpecie mixed with falſe pieces. The Turks call them aſſani, which ſignifies a lion; becauſe a lion, which is the arms of the republic, is impreſſed on both ſides.

Another great profit is the freightage of their ſhips with Armenians, and their merchandiſe for Europe.

The Dutch cloths, which are ſent from Smyrna to Conſtantinople and Perſia, are the principal object of their trade. However, they ſell there alſo ſpice, cochineal, indigo, tin, lead, and ſteel.

The Dutch have had no large eſtabliſhments in the Weſt Indies, ſince they were obliged to quit their conqueſts in Brazil; yet their trade there is very conſiderable; and their new Weſt India company, eſtabliſhed in 1674, has always maintained itſelf with reputation.

The Dutch alſo, or rather their Weſt India company, keep on footing a pretty good trade on all the coaſts of Africa. Their principal eſtabliſhment is at the Cape of Good Hope; and they have likewiſe ſeveral others in Guinea, Cape Verd, and the gold coaſt; particularly in the laſt, where they have the forts St. George and Naſſau: the others are, Anamabo, Acaro, Achim, Sama, and Bouten. Their greateſt traffic is in negroes; though their trade is alſo very conſiderable in gold duſt, elephants teeth, leather, gums, oſtriches feathers, wax, and ſome drugs for dying.

However opulent the Dutch commerce is in all the ſtates of the three above mentioned parts of the world, it is certain that the trade which their Eaſt India company has carried on upwards of a century in all the kingdoms of Aſia, is of a much greater conſequence.

The Dutch Eaſt India companies, formed before the union of 1602, ſatisfied with a peaceable poſſeſſion of their commerce, undertook nothing againſt the vaſt dominion of the Portugueſe, who had almoſt ſubjected all the coaſts and iſlands of Aſia, ſince they diſcovered the route by the Cape of Good Hope.

The general company formed out of all theſe, was for ſome time of the ſame diſpoſition; but at laſt it ventured to attack that formidable power, and found little difficulty in conquering it.

The firſt fruits of its conqueſts over the Portugueſe were the fort of the iſland of Amboina, which it took in 1605, near 100 years after the Portugueſe had taken it from the king of Ternate; and this afterwards facilitated for the Dutch the taking of the other Moluccas, ſo famous for their ſpice.

The company's fleet failed in the important fortreſs of Malacca in 1606, and could not conquer it till the year 1640: but this fatal event was followed by ſuch ſucceſs, that in 1663 the Portugueſe had ſcarce ſo much remaining as the celebrated city of Goa, and the important fortreſs of Diu, out of ſo many towns, forts, iſlands, and eſtabliſhments, they before poſſeſſed, from Ormus in the Perſian gulph to Macao, an iſland and city of China, upon the coaſt of the province of Kantung, and even as far as Japan.

The United Provinces are a confederacy of ſeveral independent ſtates; for every province, and every city almoſt, is a ſeparate ſtate, and not bound by the determination of the States-General, till their conſent is had. As the States-General cannot make war, peace, or alliance, or levy taxes, without the conſent of every province; neither can the ſtates of any province determine any thing of this kind, without the conſent of every city and petty republic in it.

The ſtates of Holland conſiſt of the deputies or repreſentatives of the nobility, and of 18 cities, making in all 19 voices, of which the nobility have only one.

In the city of Amſterdam, the ſovereign power is lodged in 36 ſenators, who continue members of the ſenate for life; and when one dies, the ſurviving ſenators elect another in his room: the people have nothing to do in the choice; and the ſenate elects the deputies to be ſent to the ſtates of Holland, and appoints the burgo-maſters and eſchevins, who may be reſembled to the mayor and aldermen. The penſioner may be reſembled to the recorder, who is always a perſon well verſed in the civil law and cuſtoms of the country; and, though he is inferior to the ſenators, has a very great influence on the ſtate, and is uſually applied to by foreign miniſters.

The conſtitution of the governments in other cities does not differ much from that of Amſterdam: the power is lodged in the principal magiſtrates, and the people have no ſhare in it, or in the election of their governors.

The States-General conſiſt of the repreſentatives of the ſeven United Provinces, who ſit conſtantly at the Hague; and no ſtadtholder, governor, or military officer, can ſit and vote in the aſſembly of the States-General. Each province appoints a preſident of this aſſembly in their turns,

turns, who is changed once a week. He ſits in the middle of a long table, which will hold about 30 perſons, the uſual number of which the States-General are compoſed; every province deputing what number of repreſentatives they pleaſe, though all that are deputed by a ſingle province have but one voice; and when the States-General have reſolved on any thing relating to peace or war, alliances or taxes, it muſt be ſent to every province and city, which is a ſovereign ſtate, to be approved and ratified.

The Dutch uſually raiſe annually between two and three millions ſterling in time of peace, out of which are paid their land-forces, conſiſting of 25,000 men, foreigners as well as national troops, particularly Switzers and Scotch; and they have ſeldom leſs than 50 men of war in commiſſion. Beſides the troops already mentioned, the Dutch keep 15 or 20,000 more in the barrier-towns; for maintaining of which they receive the ſum of 500,000 crowns *per annum*, out of the revenues of the Auſtrian Netherlands. Their taxes are raiſed by an almoſt general exciſe; and in time of war there is uſually a poll tax, a land-tax, and chimney or hearth money, levied. But every province and city vary their taxes as they ſee fit: if they provide the quota demanded of them, the States-General give no directions as to the method of raiſing it: but though the Dutch tax every thing that is conſumed at home, by eating, drinking, cloathing &c. they take care that the duties on merchandiſe ſhall be extremely low, both on importation and exportation, which makes their country a free port in a manner, and draws moſt of the traffic of Europe thither.

Dutch America.

The Dutch have four colonies in Guiana, a large country of the Terra Firma of South America, extending from the river of the Amazons, to that of Oronoko, which makes upwards of 1200 miles of coaſt; with immenſe tracts up the country, as far as Brazil on one ſide, and on the other as far as New Andaluſia.

Theſe four colonies of the Terra Firma have their name from four rivers of the province of Guiana, along which they are eſtabliſhed; of which Boron, Berbice, and Surinam, are to the north of Cayenne; and the other called Approwacq, to the ſouth; the French colony ſeparating it from the three others.

Surinam, is the moſt conſiderable of the four, yet of no great conſequence: however, the Dutch have a very good fort there, which they ſeem to have a great occaſion for; becauſe the Indians, who have been irritated by them, give no quarter when they find them at any diſtance fr[illegible] their fort.

The E[illegible]h were formerly maſters of Surinam; but the Dutch ſeized upon it in the wars between the two nations, and the Engliſh ceded it to them, in exchange for New York, by the peace of Breda.

Sugar grows there in abundance, and makes the principal object of its commerce: but indigo, tobacco, ginger, and cotton, are alſo cultivated there; and it is for this purpoſe that the Dutch eſtabliſhed at Fort Mina, on the African gold coaſt, ſend there yearly ſeveral negroes, as alſo ſeveral commodities of this coaſt, and even a conſiderable quantity of gold.

However, the Amſterdam merchants are thoſe who carry on the greateſt trade; keeping warehouſes ſtored with all kinds of merchandiſe which Europeans uſually import to America.

Boron, *Berbice*, and *Approwacq*, afford the ſame commodities, and carry on the ſame trade, as Surinam: but Berbice has this peculiar to itſelf, that, beſides the culture of cotton, which is there more abundant than in the three other colonies, it produces an excellent dying ſtuff called orellane, extracted from a plant of the ſame name, by cultivating and preparing it much after the manner of indigo.

It has alſo the advantage of having very tractable and peaceable Indians for its neighbours, who render them great ſervices in their colonies, and with whom they treat for proviſions, ſome hides, and other commodities.

Dutch American iſlands.

Euſtace, or *Euſtatia* commonly called *Statia*, is one of the leaſt of the Caribbees, ſituated in 63 deg. of W. lon. and 17 deg. 32 min. of N. lat. being about 15 miles in circumference.

The merchants of Fluſhing obtained its conceſſion from the States General; and, notwithſtanding the ſterility of the ſoil, made ſeveral plantations of tobacco on it, which conſtitutes almoſt the whole commerce of the iſland.

Saba, is ſtill ſmaller than St. Euſtace; and though almoſt entirely a rock, the inhabitants have found ſoil enough for the culture of tobacco, and the ſupport of ſeveral Dutch families, who live there at their eaſe.

St. Martin, is the laſt of the Antilles, wherein the Dutch have colonies eſtabliſhed in 1633; but they poſſeſs only the one half of the iſland, the other belonging to the French.

Its tobacco and ſalt-marſhes make all its riches and trade. The ſalt-marſhes are in the Dutch diviſion; but the French have the uſe of them.

Curaçao, or *Curraſſau*, is properly the only iſland of conſequence poſſeſſed by the Dutch in the Weſt Indies; not for its extent, or commercial productions, having but 9 or 10 leagues in length, and 5 in breadth; and affording only ſome ſugar, wool, and leather; but for the conſiderable trade, which its ſituation gives it with the Spaniards of the continent, from which it is only 7 or 8 leagues diſtant.

The port, the town, and the fort, which defends them both, are 4 or 5 leagues from the point, in the ſouth part of the iſland; where the ſhips of Carthagena and Porto-Bello came formerly to treat for negroes for Peru, whom they often bought up to the amount of 1500 at once.

This commerce is much dwindled away ſince the Engliſh of Jamaica have undertaken it: but the Dutch have ſucceeded in that of European merchandiſe; and, though contraband, it cannot be ſaid how much theſe two cities export yearly from Curacao, or how much the Dutch diſperſe throughout the whole coaſt of Venezuella, which is oppoſite, as alſo to the river De la Hache, and New Andaluſia, which are not far diſtant.

Bonaire, and *Aruba*, one of which is ten leagues from Curacoa to the eaſt, and the other only 7 to the weſt, are two iſlands belonging alſo to the Dutch; where they have ſome plantations, particularly in that of Bonaire, which is almoſt as big again as Curacao, but much leſs inhabited.

From theſe two iſlands, Curacao has almoſt all its ſubſiſtence; the Dutch ſending there ſeveral barks daily, which return loaded with maize, Guinea corn, potatoes, and the ſalted fleſh of goats, for the nouriſhment of their troops and negroes.

Bonaire furniſhes alſo ſeveral hides; for the inhabitants employ themſelves much in the grazing of horſes, bulls, and cows. There is likewiſe a ſalt marſh, which ſerves for the loading of ſome Dutch ſhips that reſort it.

Though the ſugar and tobacco cultivated at Curacao, as well as the wool, hides, and ſome other merchandiſe, make a part of the cargoes of the ſhips which return to Europe; yet this object would be too inconſiderable to attract them there, in ſuch numbers as they come yearly; and the trade of Curacao would ſoon fall, had not the richeſt merchandiſe of Spaniſh America paid them with intereſt for the care they take in keeping the warehouſes of this iſland always ſtored with European goods.

Five or ſix large ſhips uſually carry on this trade; which is ſo ſafe and rich, that they remain loaded for returning no longer than is neceſſary to clear out the effects they bring there, and to ſend thoſe aboard which they always find ready to their hands.

The Dutch have been maſters of Curacao, and theſe two other iſlands, ſince the year 1632, when they took them from the Spaniards.

UNMOOR. A term at ſea, when a veſſel that before rid, or was held by two anchors, is begun to be diſengaged, and prepared to weigh. See *Anchor*, and *Mooring*.

UNREEVING a rope. See *Reeving*.

UNRIGGING of a ſhip, is the taking away the rigging or cordage. See *Rigging*.

VOCATION, is uſed for a deſtination to any ſtate, or profeſſion.

VOLANO, or *Valona*. A port-town of Italy, in the Pope's territory, and duchy of Ferrara; lying in 13 deg. of E. lon. and 44 deg. 50 min. of N. lat. on one of the mouths of the Po, in the gulph of Venice, 40 miles eaſt of Ferrara.

VOLTA. A river on the Guinea coaſt, in Africa, which runs from north to ſouth, and falls into the ocean eaſt of Acra.

VOLTURNO. A river of Naples, which riſes in the province of Moliſe; and, paſſing by Benevento, runs eaſt by Capua; falling into the gulph of Gaieta, a bay of the Tuſcan ſea.

VOLUME. A book, or writing, of a juſt bulk to be bound by itſelf. See *Book*.

Nux VOMICA, *Vomic-nut*. A little, round, flat, woody fruit, or ſeed; hard as a horn, of a mouſe-colour without, but of different colours within, ſometimes yellow, ſometimes white, and ſometimes brown.

It is not known what the plant is that bears it; but it is a poiſon for dogs, and other quadrupeds, which it kills preſently through exceſſive vomiting.

VORTEX, *Whirlwind*, in meteorology; being a ſudden, rapid, violent motion of the air, in gyres, or circles. See *Whirlwind*.

VORTEX, is alſo uſed for an eddy, or whirlpool; being a body of water, in certain ſeas and rivers, which runs rapidly round, forming a ſort of cavity in the middle. The ordinary cauſe of theſe vortices, is a gulph, or outlet, whereby the water of ſuch ſea or river is abſorbed, or precipitates itſelf into ſome other receptacle; ſometimes to ſome other communicant ſea or river, and ſometimes perhaps into the vaſt abyſs of central water.

VOUA. A long meaſure, uſed in the kingdom of Siam; 2 kens make 1 voua, 2 ſoks 1 ken, 2 keubs 1 ſok, and 12 nious 1 keub; the niou being 3-4ths of an inch.

VOUCHER, ſignifies a ledger-book, or book of accompts, wherein are entered the warrants for the accomptant's diſcharge. See *Book*-keeping.

But voucher alſo ſignifies any writing, or proof, for buſineſs done among tradeſmen; which they are often obliged to produce and prove, before they are paid.

VOUL. A ſmall meaſure, uſed by the inhabitants of Madagaſcar, for clean rice, containing about half a pound.

UPHOLDER, or *Upholſterer*. A tradeſman, who makes beds, and other ſorts of houſhold-furniture.

UPHOLDERS *company of London*, was incorporated by letters-patent of the 2d of Charles I. dated the 14th of June 1627, by the name of The maſter, wardens, and commonalty of the myſtery or art of the upholders of the city of London; being governed by a maſter, 2 wardens, and 28 aſſiſtants, with a livery of 131 members; who, upon their being admitted, pay a fine of 4 l. 10 s. but have no hall.

URINE, in agriculture, is of excellent uſe as a manure.

Experienced perſons in agriculture and gardening, prefer urine for land and trees before dung; as penetrating better to the roots, and removing ſeveral infirmities of plants: ſo that in Holland, and many other countries, they preſerve the urine of their beaſts, with as much care as their dung.

URUS. A ſort of buffalo, found in the foreſts of Lithuania, in Poland. It is a very furious animal, with round and ſhort horns; having a beard reſembling that of a goat, with long and blackiſh hair.

The ſkin of this animal is ſaid to have a ſpecific quality, with regard to pregnant women, by keeping them from abortion; which makes its value conſiderable, eſpecially among the Poliſh ladies, who ſeem perſuaded of its virtue.

USALTON. A ſilver coin current in Aſiatic Georgia, worth about 10 d. ſterling.

USANCE, in commerce, is a determinate time for the payment of bills of exchange, reckoned either from the day of the bills being accepted, or from the day of the date; and thus called, becauſe regulated by the uſage and cuſtom of the places whereon they are drawn. See *Bill*, and *Exchange*.

Bills of exchange are either drawn at one or more uſances, either from ſight, or from date. The Italians ſay, *uſo doppio*, for double uſance, or two uſances; but this term is longer or ſhorter, according to the different countries. In France, uſance is fixed at 30 days. At London, uſance is a common month, and double uſance two months. In Spain, uſance is two months, or 60 days. At Venice, Genoa, and Leghorn, 3 months. At Hamburgh, uſance of bills drawn from England, France, and Venice, is two months after date. From Antwerp and Nuremberg, 15 days after ſight.

At Venice, uſance of bills drawn at Ferrara, Bologna, Florence, Lucca, and Leghorn, is five days after ſight. From Naples, Auſbourg, Genoa, and Vienna 15 days after ſight. From Mantua, Modena, and Milan, 20 days after date. From Amſterdam, Antwerp, and Hamburgh, two months after date; and from London, three months after date.

At Milan, uſance of bills from Genoa is 8 days after ſight, from Rome 10 days after ſight, and from Venice 20 days after date.

At Florence, uſance of bills drawn from Bologna, is 3 days after ſight; from Rome, 10 days after ſight; from Venice and Naples, 20 days after date.

At Rome, uſance of bills of exchange drawn in Italy, was originally 10 days after ſight; but, by an abuſe, this term has been extended to 15. At Leghorn, uſance of bills drawn from Genoa, is 8 days after ſight; from Rome, 10 days; from Naples, 3 weeks; from Venice, 3 weeks; from London, 3 weeks; and from Amſterdam, 40 days.

At Amſterdam, uſance of bills drawn from England and France, is a month after date; from Venice, Madrid, Cadiz, and Seville, 2 months.

At Genoa, uſance of bills from Milan, Florence, Leghorn, and Lucca, is 8 days after ſight; from Venice, Rome, and Bologna, 15 days; from Naples, 22 days; from Sicily, a month after ſight, or 2 months after date; from Sardinia, a month after ſight; from Antwerp, Amſterdam, and other places in the Low Countries, 3 months after date.

USAGES and cuſtoms of the ſea, are certain maxims, rules, or uſages, which make the baſe or ground-work of maritime juriſprudence, whereby the policy of navigation, and commerce of the ſea, are regulated. See *Navigation*, and *Commerce*.

Theſe uſages and cuſtoms conſiſt in three kinds of regulations. The firſt, called laws or judgments of Oleron, were made by order of Queen Eleanor, ducheſs of Guienne, at her return from the holy war; chiefly from memoirs which ſhe had gathered in the Levant, where commerce was then in a very flouriſhing condition. She called them laws of Oleron, by reaſon ſhe then reſided in an iſland of that name, in the bay of Aquitaine. They were much augmented about the year 1266, by her ſon Richard, king of England, on his return from the holy land.

The ſecond regulations were made by the merchants of Wiſby, a city in the iſland of Gothland, in the Baltic ſea, antiently much famed for commerce, as moſt of the nations of Europe had their magazines, quarters, and ſhops, therein. Theſe cuſtoms were compiled in the Teutonic language, and are ſtill the rule in the northern countries. Their date does not appear; but it is probable they were made ſince the year 1288, when the city of Wiſby was deſtroyed the firſt time; which was afterwards reſtored by Magnus, king of Sweden.

The third ſett of regulations were made at Lubec, about the year 1597, by the deputies of the hanſe towns. See *Hanſe*.

USQUEBAUGH. A ſtrong, rich, compound liquor, chiefly taken by way of dram; its baſis being brandy, or rectified ſpirits of wine.

The proceſs is ſomewhat various, and the ingredients numerous; but the following was much commended formerly as a ſpecimen.

To two gallons of brandy, or ſpirits, put a pound of Spaniſh liquorice, half a pound of raiſins of the ſun, four

four ounces of currants, and three of dates ſliced; tops of thyme, bawn, ſavory, mint, and tops of flowers of roſemary, of each two ounces; cinnamon and mace bruiſed, nutmegs, anis and coriander ſeeds, bruiſed likewiſe, of each four ounces; citron, or lemon and orange peel, ſcraped, of each an ounce. All which muſt be left to infuſe 48 hours in a warm place, often ſhaking them together: then ſet them in a cool place for a week; after which the clear liquor is to be decanted off; and an equal quantity of neat white port wine, and a gallon of canary, are to be added: the whole to be ſweetened with a proper quantity of double refined ſugar.

USURER. A perſon charged with a habit or act of uſury. The laws of our antient Saxon and Norman kings are very ſevere upon uſurers, or letters out of money upon intereſt; who were indeed allowed to diſpoſe of their goods before conviction, and whilſt they were living; but, after their death, they were confiſcated, if it could be proved they lent money to uſe within a year before their death.

USURIOUS *contract*, is any bargain or contract, whereby a man is obliged to pay more intereſt for money than the ſtatute allows. See *Intereſt*.

USURY, in the general, denotes a gain or profit, which a perſon makes of his money, by lending the ſame; or it is an increaſe of the principal exacted for the loan thereof, or the price a borrower gives for the uſe of a ſum credited to him by the lender; called alſo intereſt, and in ſome antient ſtatutes dry exchange. See *Exchange*.

The word *uſury* is uſually taken in an evil ſenſe, that is, for an unlawful profit, which a perſon makes of his money; in which ſenſe it is that uſury is forbidden by the

civil and eccleſiaſtical law, as well as by the law of nature. In this ſenſe it alſo is, that it is held uſury to lend money upon pawns, to exact intereſt for money without ſurrendering the principal, and to ſtipulate intereſt for money which is not employed in trade, nor brings any profit to the perſon who receives it. But as the Latin word *uſura*, at leaſt the plural *uſuræ*, may be underſtood of a lawful intereſt, we do not ſee why uſury may not be uſed in Engliſh in the ſame harmleſs ſenſe. By the antient Roman law, people were allowed to lend out their money at 1 *per cent. per* month, which was 12 *per cent. per annum.* If they received more, they incurred the note of infamy, and the overplus was charged on the principal. This rate of uſury was allowed of as low as the time of Juſtinian, who moderated it a little by the 26th law in the code *de uſuris*; and, not long after, the canon law forbid all uſury whatſoever. In compliance with this prohibition, the cuſtomary laws allow no intereſt to be exacted for money lent on a ſimple obligation; but only by contract, and upon alienating the principal, which the debtor is to reimburſe at pleaſure; being a kind of buying an annuity, or annual revenue. So that, in propriety, unlawful uſury conſiſts, in extorting an exceſſive rate for money, beyond what is preſcribed by law.

By the ſtatute of Charles I. no man is allowed to take above 6 l. for the forbearance of 100 l. for one year, under certain penalties therein enjoined. And by a later ſtatute, of the 12th of Anne, no man may take above 5 l. for the like, and in proportion for any other ſum.

UZIFIR, *Uzufar*, or *Uzifur*, in chemiſtry. A name which ſome authors give to cinnabar. See *Cinnabar*.

W.

WAAG. A river of Hungary, riſing in the Carpathian mountains, on the confines of Poland; and, running firſt from E. to W. turns S. then paſſes by Leopoldſtadt, and falls into the Danube, oppoſite the iſland of Schut.

WAAL. A river of the United Netherlands, being one of the branches of the Rhine, which runs from E. to W. through the Betue, in the province of Guelderland, paſſing by Nimeguen, Tiel, Bommel, and Gorcum; and continuing its courſe eaſtward, unites its waters with the Maes; then paſſing by Dort, falls into the German ſea below the Briel.

WAD. A term among the miners, near Penrith in Cumberland, for the black lead of that country. See Black *Lead.*

WADDING. A thin coarſe woollen manufacture, made to line mens morning gowns, and the plaits of their coats.

WAFER. A thin cake, or paſte dried; generally uſed for ſealing of letters.

WAFT. To waft a ſhip is to convoy her ſafe, as men of war do by merchant-ſhips. See *Convoy.*

It alſo ſignifies a ſignal intended to ſhew that a ſhip is in diſtreſs, by a leak, or the like; and therefore wants help from the ſhore, or from other ſhips.

To make a WAFT, is to hang out ſome coat, ſea-gown, or ſuch like, in the main ſhrouds of the ſhip; as a ſign for the men to come on board.

WAFTERS. Conductors of veſſels at ſea. See *Convoy.*

King Edward IV. inſtituted a triumvirate of officers with naval power, whom the patent ſtiles, cuſtodes, conductores, and waftores. Their buſineſs chiefly was to guard fiſhermen on the coaſts of Norfolk and Suffolk.

WAGE. A weight uſed at Amiens, a town of Picardy in France, where it weighs 165 lb. and makes 134 lb. 3 oz. avoirdupois. See *Weight.*

WAGGON. A kind of vehicle, or carriage, in common uſe.

The larger the wheels of a waggon, and their circumference are, the eaſier is the motion; and the leſs, the heavier, and more jogging they go. The only reaſon the fore-wheels of waggons and coaches are made leſs than the hind wheels, is for the convenieney of turning. The more upright or ſquare the ſpokes of the wheel are from the box, or center, the weaker they are, when they come to bear on either ſide: on which account, as alſo to ſecure a wheel from breaking in a fall, they are made concave or diſhing. See *Carriage.*

WAGGONER, is uſed for a routier, or book of charts, deſcribing the ſeas, and their coaſts. See *Chart.*

WAIGATS, or *Weygats Straits*, are ſituated between Nova Zembla and Ruſſia, in 6 deg. of E. lon. and 70 deg. of N. lat. thro' which the Dutch ſailed to the north as high as 75, to diſcover a north-eaſt paſſage to China and the Eaſt Indies.

WAINSCOT, in building, the timber-work ſerving to line the walls of a room; being uſually in pannels, and painted, to ſerve inſtead of hangings.

According to Neve, wainſcotting with Norway-oak, the workman finding ſtuff, is valued at 6 or 7 s. *per* yard ſquare. Plain ſquare wainſcotting, the workman finding deal, is valued at 3 s. 6 d. *per* yard. Large biſſection wainſcotting, with Dantzick ſtuff, is valued at 6 or 7 s. *per* yard; and ordinary biſſection work, at 3 s. 6 d. *per* yard. In taking dimenſions they uſe a ſtring, which they preſs into all the mouldings; it being a rule that they are to be paid for all where the plane goes.

WAKE *of a ſhip*, is the ſmooth water a-ſtern, when ſhe is under ſail: by which a gueſs may be made of what ſpeed ſhe makes. They alſo judge from this, whether the ſhip goes as ſhe looks; that is, whether ſhe makes her way right a-head, as ſhe lies, as ſhe does when her wake is right a-ſtern; but if this wake is a point or two to leeward, they judge that ſhe falls to the leeward of her courſe. When, in a ſhips ſtaying, ſhe is ſo quick, that ſhe does not fall to leeward upon a tack; but that, when tacked, her wake is to the leeward; they ſay ſhe ſtays to the weather of her wake; which is a ſign, ſhe feels her helm well, and is nimble of ſteerage. Alſo, when one ſhip giving chaſe to another, is got as far into the wind as ſhe, and ſails directly after her; they ſay, ſhe is got into her wake.

WALES-*New*, or *New Wales*, is a name given to the S. W. coaſt of Hudſon's bay, in North America, now poſſeſſed by the Engliſh Hudſon's bay company.

WALES, in a ſhip, are the ribs or bends of planks, that lie ſome beyond others, for the men to clamber up the ſides, by putting their feet thereon.

WALLOON, or *Waloon*. A kind of old French, being the language ſpoke by the Walloons, or the inhabitants of a conſiderable part of the French and Auſtrian low countries, namely, thoſe of Artois, Hainault, Namur, Luxemburg, and part of Flanders and Brabant.

WALNUT. A large nut, whoſe kernel is pleaſant to eat; and the wood of the tree was eſteemed the fineſt in the world for making beautiful cabinets, tables, writing-deſks, and other furniture, before mahogony came in faſhion. See *Mahogony.*

WALRUS, or *Narhval*; called alſo, tho' improperly, *Sea Horſe*. A kind of fiſh frequent in the North ſea, and remarkable for its long horn, which has made it paſs in Europe, in the cabinets of the curious, for the unicorn's horn.

This fiſh, which, next to the whale, is the moſt enormous of the ſpecies, is taken after the ſame manner; but, as the body ſerves neither for food nor oil, the head is cut off as ſoon as the fiſh is caught.

The walrus, then, is only fiſhed for upon account of its horn, and its teeth, which ſerve for the making of all ſorts of work in the manner of ivory; and which are ſold much dearer, not only as they ſurpaſs ivory in whiteneſs; but alſo as the works made from it never yellow, nor redden ſo readily.

The horn of this fiſh is very weighty, being moſt commonly very ſtrait, and ending in a point. It is upwards of 15 feet in length, and turned like a ſnail towards the root, where it is 3 or 4 inches in diameter, diminiſhing to the point.

The larger teeth weigh ſometimes four pounds.

The broken ſcraps of the horn are ſold uſually for that of the unicorn; the ſame virtues againſt poiſons, perhaps with the ſame foundation and ſucceſs, being attributed to them.

Man of WAR. See *Ship* and *Rate.*

WARD. A word uſed in law books, in different ſignifications. Thus, a ward in London is a part of the city, committed to the ſpecial charge of one of the aldermen of the city; where there are 26 wards, which are as hundreds, and the pariſhes thereof as towns.

WARDE. See *Denmark.*

WARDEN, or *Lord Warden of the cinque ports*, is the governor of thoſe noted havens; who has the authority of an admiral, and ſends out writs in his own name. See *Cinque* Ports.

WARDEN *of the mint*, is an officer, whoſe buſineſs is to receive the gold and ſilver bullion brought in by the merchants, to pay them for it, and overſee the other officers. He is alſo called keeper of the exchange and mint. See *Mint.*

WARDHUYS. A port-town of Norwegian Lapland, lying in 28 deg. of E. lon. and 71 deg. of N. lat. 120 miles S. E. of the North cape, on a very ſmall iſland near the continent; ſubject to Denmark.

WARDMOTE, in London. A court ſo called, which is kept in every ward of the city, anſwering to the *curiata comitia* in ancient Rome.

WARE. Any ſort of goods or merchandiſe fit for ſale: alſo a ſtoppage or dam in a river. See *Wear*.

WARIENBURG. See *Denmark*.

WARP, in the manufactures, is the threads, whether of ſilk, wool, linen, hemp, cotton, or the like, that are extended length-wiſe on the weaver's loom; and a-croſs which the workman, by means of his ſhuttle, paſſes the threads of the woof, to form a cloth, ribband, fuſtian, or other matter. For a woollen ſtuff to have the neceſſary qualities, it is required that the threads of the warp be of the ſame kind of wool, and of the ſame fineneſs throughout; that they are ſized with Flanders or parchment ſize, well prepared; and that they are in ſufficient number, with regard to the breadth of the ſtuff to be wrought. See *Cloth* and *Woof*.

To WARP *a ſhip*, is to hale her to a place, when the wind is wanting, by means of a hawſer, a cable, and an anchor fixed thereto.

WARRANT. An act, inſtrument, or obligation, whereby a perſon promiſes another to do ſomething, which he had not otherwiſe a right to do.

WARSAW. The capital city of Poland, ſituated on the river Viſtula, in 21 deg. 5 min. of E. lon. and 52 deg. 15 min. of N. lat. 150 miles N. of Cracow, and 140 S. of Dantzick. See *Poland*.

WARTA. A river of Poland, riſing in the province of little Poland; then paſſing by the city of Poſna, and having entered Brandenburg, falls into the river Oder at Kuſtrin.

WASHING *a ſhip*, in the ſea language, is when all the guns are brought to one ſide; and the men, getting upon the yards, waſh her other ſide, and ſcrape her as far as they can reach.

WASHINGS, or *Waſhes*, among goldſmiths and coiners, are the lotions whereby they recover the particles of gold and ſilver out of the ſweep; that is, aſhes, earths, and ſweepings: which is either performed by ſimply waſhing them again, or by putting them in the waſhing mill.

WASTE. The loſs or ſpoil of goods.

WASTE-*book*. See *Book*-keeping.

WASTE *of a ſhip*, is that part of her between the main-maſt, and the fore-maſt.

WASTE-*boards*. Are boards ſometimes ſet upon the ſide of a boat, or other veſſel, to keep the ſea from breaking in her.

WATCH, at ſea, ſignifies a meaſure, or ſpace of four hours; becauſe half the ſhip's crew watch, and perform duty in their turns during that time. Thus, the ſhip's company is divided into two parts, the larboard-watch, and the ſtar-board watch: the maſter of the ſhip commanding the latter, and the chief mate the former. Sometimes, when a ſhip is in harbour, they watch but a quarter watch, as they call it; that is, but a quarter of the company watch at a time.

The WATCH-*glaſs*, being four hours, is uſed at ſea to ſhift or change their watches. There are alſo half-watch hour-glaſſes; minute and half minute glaſſes; by which laſt they count the knots when they heave the log, in order to find the ſhip's way.

WATCH, is alſo uſed for a ſmall portable movement, or machine, for the meaſuring of time; having its motion regulated by a ſpiral ſpring. See *Watch*-work.

WATCHES, ſtrictly taken, are all ſuch movements as ſhew the parts of time; as clocks are ſuch as publiſh it, by ſtriking on a bell: but commonly, the name watch is appropriated to ſuch as are carried in the pocket; and that of clock to the large movements, whether they ſtrike the hour or not.

Spring, or pendulum WATCHES, ſtand pretty much on the ſame principle with pendulum clocks; whence their denomination. If a pendulum deſcribing little arches of a circle, make vibrations of unequal length in equal times; it is by reaſon it deſcribes the greater with a greater velocity. For the ſame reaſon, a ſpring put in motion, and making greater or leſs vibrations, as it is more or leſs ſtiff, and as it has a greater or leſs degree of motion given it, performs them nearly in equal times. Hence, as the vibration of pendulums had been applied to large clocks, to rectify the inequality of their motions; ſo, to correct the unequal motions of the balance of watches, a ſpring is added; by the iſochroniſm of whoſe vibrations, the correction is to be effected.

The invention of ſpring, or pocket WATCHES, is owing to the felicity of the preſent age. It is true, mention is made of a watch preſented to Charles V. in the hiſtory of that prince: but this, in all probability, was no more than a kind of clock to be ſet upon a table; ſome reſemblance whereof is ſtill remaining in the ancient pieces made before the year 1610.

In effect, it is between Dr. Hooke and Mr. Huygns, that the glory of this excellent invention lies; but to which of them it properly belongs, is greatly diſputed; the Engliſh aſcribing it to the former; the French and Dutch to the latter.

Mr. Derham, in his Artificial Clockmaker, aſſerts that Dr. Hooke was the inventor; and adds that he contrived various ways of regulation; but ſays, that the way that prevailed, and which continues in mode, was with one balance, and one ſpring running the upper part of the verge thereof.

The time of theſe inventions was about the year 1658, as appears, among other evidences, from an inſcription on one of the double balance watches, preſented to King Charles II. namely, Robert Hooke inven. 1658, T. Tompion fecit, 1675. The invention preſently got into reputation, both at home and abroad; and two of them were ſent for by the dauphin of France. Soon after this, Mr. Huygen's watch, with a ſpiral ſpring, got abroad, and made a great noiſe in England, as if the longitude could be found by it. It is certain, however, that his invention was later than the year 1673, when his book de Horol. Oſcillat. was publiſhed; wherein he has not one word of this, tho' he has of ſeveral other contrivances in the ſame way.

M. Savary, pretending to match the French watchmakers with the Engliſh, "aſſerts, that if the Engliſh "are in any condition to diſpute it with them, they owe "it entirely to the great number of French workmen, "who took ſhelter in England upon the revocation of "the edict of Nantz. He adds, that three-fourths of the "watches made in England, are the work of French-"men."

It is unknown from what authorities he ſays this; but it need not be told Engliſhmen that it is falſe; there not being one Frenchman, as we know of, among all our famed watchmakers; nor, in the body of watches, is there one-eighth part French. It is certain the French people prefer Engliſh watches vaſtly to their own; inſomuch, that to have them with the more eaſe, a number of Engliſh workmen were invited over in 1719, and eſtabliſhed with great countenance at Verſailles, under the direction of the famous Mr. Law: but the eſtabliſhment, tho' every thing promiſed well for it, and the French watch and clock-makers ſeemed undone by it, fell to the ground in leſs than a year's time. M. Savary imputes its fall entirely to that ſtrong prejudice of the French people, in behalf of the Engliſh workmen, and to the opinion that the watches did not come from England. The truth is, the workmen ſent over, being moſt of them of looſe characters, grew diſſolute, quarrelled with the prieſts, inſulted the magiſtrates, and were diſmiſſed of neceſſity.

Striking WATCHES, are ſuch, as beſides the proper watch-part, for meaſuring of time, have a clock-part, for ſtriking the hour; which are real clocks, only moved by a ſpring inſtead of a weight; and, properly ſpeaking, they are called pocket-clocks.

Repeating WATCHES, are ſuch as by pulling a ſtring repeat the hour, quarter, or minute, at any time of the day or night.

This repetition, was the invention of Mr. Barlow, and

first put in practice by him, in larger movements, or clocks, about 1676. The contrivance ſet other artiſts to work, who ſoon found various ways of effecting the ſame. But, its application to pocket watches was not known before the reign of king James II. when the ingenious inventor above mentioned, having directed Mr. Thompſon to make a repeating watch, was ſolliciting a patent for the ſame.

The talk of a patent engaged Mr. Quare, to reſume the thoughts of a like contrivance, which he had in view ſome years before. He now effected it: and being preſſed to prevent Mr. Barlow's patent, a watch of each kind was produced before the king and council, upon trial of which, the preference was given to that made by Mr. Quare. The difference between them was, that Mr. Barlow's was made to repeat by puſhing in two pieces on each ſide the watch-box, one of which repeated the hour, and the other the quarter: whereas Mr. Quare's was made to repeat by a pin, which ſtuck out near the pendant; and being thruſt in, as it is now done by thruſting in the pendant itſelf, repeated both the hour and the quarter with the ſame thruſt.

Great quantities of watches are exported to Aſia, particularly to Turky; where they ſerve more for ornaments like pictures in rooms, than for uſe in the pockets.

Watches are not to be exported without being allowed by the commiſſioners of the cuſtoms. See *Silver*.

WATCH-*maker*. A perſon whoſe employment conſiſts in watch-making, which is thrown into many branches.

WATCH-*work*, is that part of the movement of a clock, or watch, which is deſigned to meaſure and exhibit the time on the dial-plate; in contradiſtinction to the part that contributes to the ſtriking of the hour, which is called clock-work.

The ſeveral members of the watch-part are, firſt, the balance, conſiſting of the rim, which is its circular part; and the verge, which is its ſpindle; to which belong the two pallets, or leves, that play in the teeth of the crown-wheel. 2. The potance, or pottance, which is the ſtrong ſtud in pocket-watches, whereon the lower pivot of the verge plays, and in the middle of which, one pivot of the balance-wheel plays; the bottom of the potance is called the foot; the middle, the noſe; and the upper part, the ſhoulder. 3. The cock, which is the piece covering the balance. 4. The regulator, or pendulum ſpring, which is the ſmall ſpring in the new pocket-watches, underneath the balance. 5. The pendulum, whoſe parts are, the verge, the pallets, cocks, and the bob. 6. The wheels, which are, the crown-wheel, in pocket pieces, and ſwing-wheel in pendulums, ſerving to drive the balance or pendulum. 7. The contrate-wheel, which is that next the crown-wheel, and whoſe teeth and hoop lie contrary to thoſe of other wheels, whence the name. The great, or firſt wheel, being what the fuſee immediately drives: after which are the ſecond, third, and the reſt of the wheels. Laſtly, between the frame and the dial-plate, is the pinion of report, which is that fixed on the arbor of the great wheel, and ſerves to drive the dial wheel, as that ſerves to carry the hand.

WATER, in geography and hydrography, is a common or general name applied to all liquid tranſparent bodies, gliding or flowing on the earth: in which ſenſe, water and earth are ſaid to conſtitute the terraqueous globe.

Some authors have raſhly and injuriouſly taxed the diſtributions of water and earth in the globe as unartful, and not well proportioned; ſuppoſing that the water takes up too much room.

Sea-WATER, is an aſſemblage of bodies, wherein water can ſcarce be ſaid to have the principal part: it being an univerſal colluvies of all the bodies in nature ſuſtained and kept ſwimming in water, as a vehicle; which is liable to ſeveral periodical changes. See *Ocean* and *Tides*.

High-WATER. }
Low-WATER. } See *Flux*, *Ebb*, and *Tide*.
Ebb-WATER. }

Rain-WATER, is the water of the ſea, purified by a ſort of diſtillation; or, rather, it is the watery vehicle ſeparated from the ſaline, and other matters reſiding therein, by evaporation.

Spring-WATER, is the next in point of purity. This, according to Dr. Halley, is collected from the air itſelf, which, being ſaturated with water, and coming to be condenſed by the evenings cold, is driven againſt the cold tops of the mountains; where being further condenſed and collected, it gleets down, or diſtils, much as in an alembic.

This water, which before floated in the atmoſphere in form of a vapour, being thus brought together, at firſt forms little ſtreams, ſeveral of which meeting together, form rivulets; and theſe, at length rivers.

River-WATER, is eſteemed purer than that of ſprings, on ſome occaſions. If the ſtream deſcending from its ſpring, chance to flow over ſtrata or beds, wherein there are ſalt, ſulphur, vitriol, iron, or the like, it diſſolves and imbibes part thereof: otherwiſe, ſpring water becomes purer and better; for while the river drives on its water in an uninterrupted ſtream, all its ſalts, with the vegetable and animal matter, from exhalations, or from the ground it waſhes, either gradually ſink to the bottom, or are driven on the ſhore: and, hence, the ancient poets and painters repreſent the deities of ſprings and rivers, as combing and carding their waters.

With regard to the qualities of water, it is further diſtinguiſhed into ſalt-water and freſh-water.

Salt-WATER. See *Salt*, and *Sea* water.

Freſh-WATER. It is generally granted, that thoſe waters are the beſt, both for wholſomeneſs, and for various other œconomical uſes, that are freeſt from ſaltneſs; which, in moſt caſes, is a hurtful quality in waters.

Uſes of WATER. The uſes of water are infinite, in food, in medicine, in agriculture, in navigation, and in many arts.

WATER-*mill*. See *Mill*.

WATER-*ſpout*. See *Spout*.

WATER, in natural hiſtory, is diſtinguiſhed into pure, called alſo elemental, mineral, and artificial, or factitious.

As to the pure, it has been already obſerved, that there is, perhaps, none abſolutely ſo; all water containing more or leſs particles, ſuch as thoſe in terreſtrial bodies, though not earthy particles, but oils, ſalts, and the like.

Mineral-WATERS, are thoſe which contain many particles of different nature from water, deriving from thence ſome particular quality, which is not in common water: or mineral waters are thoſe which have contracted ſome virtue extraordinary, by paſſing thro' beds of minerals, as alum, vitriol, ſulphur, and the like; or by receiving the fumes thereof.

The kinds of mineral waters are various, as are the kinds of compoſitions of the minerals with which they are impregnated.

Some are ſimple, as only containing mineral particles of one ſort; others mixed, of two, three, four, or more ſorts. Hence, there are, 1. Metallic waters in different parts; golden, ſilver, copper, tin, and iron waters. 2. Saline waters, as nitrous, aluminous, vitriolate, and thoſe of common ſalt. 3. Bituminous, ſulphurous, antimonial, carbonaceous, and amber-waters. 4. Earthy, and ſtony waters, as lime, chalk, oker, cinnabar, marble, and alabaſter waters: to which ſome add mercurial waters.

This diviſion of mineral waters is taken from their eſſences; that is, from the mineral particles they contain: but the moſt uſual, and moſt celebrated diviſion, is borrowed from the manner wherein they affect our ſenſes; with regard to which, there are ſeveral kinds; namely, the acid, bitter, hot, cold, oily and fat, poiſonous, coloured, boiling, petrifying, incruſtating, and ſaline.

Acid-WATERS, ariſe from the admixture of vitriol, nitre, alum, and ſalt. Theſe are cold, and very frequent; there being reckoned no leſs than 1000 in Germany alone: ſome of which are ſaid to be as ſour as vinegar, and uſed inſtead thereof; others vinous, ſerving for wine; and others aſtringent.

Hot WATERS, ariſe from the admixture of ſulphurous particles and fumes: of theſe, the hotteſt is that in Japan, which, it is ſaid, no fire can bring water to equal; and which keeps its heat thrice as long as our boiled water.

Oily and Fat WATERS, ariſe from a bituminous and ſulphurous matter; ſuch as amber, petroleum, pitch, and naphtha.

Bitter WATERS, are produced from an impure ſulphur, bitumen, nitre, and copper: ſuch is the lake Aſphaltites.

Very cold WATERS, have their riſe from a mixture of nitre and alum; or of mercury and iron: the depth of the ſource of the ſpring alſo, has in this caſe ſome effect.

WATERS, in medicine, pharmacy, and chemiſtry, are a kind of liquors procured or prepared by art from divers bodies, principally of the vegetable tribe; having various properties, and ſerving various purpoſes. Theſe waters are either ſimple or compound.

Simple WATERS, are thoſe procured from ſome one vegetable body. The vegetable ſubjects beſt fitted for diſtillation, are the ſapid and odorous; or thoſe of the aromatic tribe, as angelica, aniſeed, baum, carraway, coriander, cumin, dittany, fennel, hyſſop, marjoram, mint, roſes, roſemary, ſage, ſcurvy-graſs, thyme, cinnamon, citron, juniper, lime, myrtle, orange, peach, and ſuch like.

The ſimple waters of chief virtue in medicine are; dill-water, aqua anethi; baum-water, aqua meliſſæ; angelica-water, aqua angelicæ; mint-water, aqua menthæ; roſemary-water, aqua anthos; orange-flower-water, aqua naphæ; black-cherry-water, aqua ceraſor. nig. parſly-water, aqua petroſelini; camomile, chamom. penny-royal, pulegii; fennel-water, aqua fæniculi; damaſk-roſe-water, aqua roſarum dam; hyſſop-water, aqua hyſſopi; rue-water, aqua rutæ; juniper-water, aqua juniperi bacc. elder-water, aqua ſambuci flor. lovage-water, aqua leviſtici; and carminative-water, aqua carminativa.

Compound WATERS, or thoſe wherein ſeveral ingredients are uſed, are very numerous, and make a large article in commerce; ſome of which are prepared by the apothecaries, according to the diſpenſatory preſcripts for medicinal uſes; others by the diſtillers to be drank by way of dram; and others by the perfumers. They are diſtinguiſhed by different epithets, taken from the Latin, Greek, Arabic, and Engliſh languages; in reſpect either of the ſpecific virtues of the waters, or the parts of the body, for the cure whereof they are intended; or the diſeaſes they are good againſt; or the ingredients they are compounded of; or their different uſes. The moſt conſiderable among this claſs, have been endeavoured to be enumerated as follows: but the manner of making them is not always the ſame, eſpecially thoſe intended for drinking, for which every one follows his own method: however, thoſe delivered here, were taken from ſuch as have the greateſt reputation in preparing things of this nature, or from thoſe who have wrote the beſt concerning them. There are only three general remarks to add, with regard to thoſe intended for drinking. Firſt, that ſuch wherein any thing is infuſed, as bruiſed fruits, pounded herbs, or ground ſpices, are always paſſed thro' a ſtrainer, to make them finer and purer. 2. That thoſe made with brandy, or ſpirit of wine, are uſually diſtilled after mixing their ingredients, which renders thoſe liquors exceedingly ſtrong and dangerous. In effect, ſome of them are ſo penetrating that they burn the tongue when taken. 3. That the waters which take their name from any particular thing, as cinnamon, citron, or the like, have always ſome other ingredients joined with them, according to the taſte or ſmell required.

Alexipharmic, or *Alexiterial* WATERS, are waters that reſiſt poiſon or the plague; ſuch are thoſe of angelica, ſcorzonera, citron, orange, ſcordium, and rue. Such alſo are treacle water, plague-water, milk-water, poppy water, and others.

Alum-WATER, is a vulnerary water, thus called, becauſe the baſis, or principal ingredient thereof is alum.

Angelica-WATER, is uſually prepared of brandy, angelica roots and ſeeds, carduus, baum, and fennel-ſeeds: the whole, beat together in a mortar, infuſed for a night in French brandy, and then diſtilled, is reputed a good carminative, cordial, and cephalic.

Aromatic-WATERS, are already ſpoke of among the ſimple waters.

Arthritic-WATERS, are waters good againſt the gout, palſy, tremors, pains in the joints, and the like. Such are thoſe of piony, chamæpitys, betony, and roſemary.

Bryony-WATER, is one of the compound waters, preſcribed in the college diſpenſatory; prepared from bryony-roots, rue, mugwort, ſavin, feverfew, dittany, and other herbs: it is a very good hyſteric, and opens menſtrual obſtructions.

Carduus WATER, is made from carduus benedictus pounded in a mortar, and put in an alembic. This water is ſudorific, being good againſt the plague, and malignant fevers.

WATER *of ſeparation and depart*, is only aqua fortis; thus called, becauſe ſerving to ſeparate gold from ſilver. It is alſo called *cauſtic water*, being prepared of a mixture of ſpirit of nitre and vitriol, drawn by force of fire; to which are ſometimes added alum. It diſſolves all metals, gold only excepted.

Cephalic WATERS, are waters proper to ſtrengthen or comfort the brain; ſuch are thoſe of roſemary, baum, ſage, marjoram, and betony.

Chalybeat-WATER, is that wherein hot ſteel has been quenched, which is aſtringent, and good for diarrhœas.

Cinnamon-WATER. In a quart of water, boil an ounce of broken cinnamon; take it off the fire, and add a quarter of a pound of ſugar; then let it cool and ſtrain it. Or thus; take a pound of cinnamon, three pounds of roſe-water, and as much white-wine: bruiſe the cinnamon, infuſe it 14 days, and then diſtil it. The firſt water that riſes is the beſt; then the ſecond, and then the third.

Clary-WATER, is compoſed of brandy, ſugar, and cinnamon, with a little ambergreaſe diſſolved in it. This helps digeſtion, and is cardiac; it may be rendered either purgative or emetic, by adding reſins of jallop and ſcammony, or crocus metallorum. Some make clary-water of brandy, juice of cherries, ſtrawberries, and gooſeberries, ſugar, cloves, white-pepper, and coriander-ſeeds; infuſed and ſtrained.

Clove-WATER, is prepared of brandy, and cloves bruiſed therein and diſtilled.

Cordial, or *Cardiac*-WATERS, are waters proper to ſtrengthen and comfort the heart. Such are thoſe of endive, chicory, bugloſe, burrage, and marygolds.

Coſmetic-WATERS, are waters proper to cleanſe, ſmooth, and beautify the ſkin.

Gentian-WATER, is frequently uſed as a ſtomachic, and alſo commended for a detergent; ſerving in dropſies, the jaundice, and obſtructions of the viſcera.

Gum-WATER, is that made by letting gum-arabic, incloſed in a linen bag infuſe in common water. The ladies alſo make water to gum their hair, of quince kernels ſteeped in water.

Hepatic-WATERS, are thoſe uſed to cleanſe, ſtrengthen, and refreſh the liver. Such are thoſe of chicory, capillaries, purſlain, agrimony, and fumitory.

Honey-WATER, is a water prepared in places where much honey is made, by waſhing out the honey-combs, and the veſſels they have been in, with common water; which gives it a honey taſte, and afterwards, becoming clear, people uſe it as their common drink.

Horſe-radiſh-WATER, is prepared of the juices of ſcurvy-graſs, brook lime, water-creſſes, white-wine, lemon-juice, bryony-root, horſe-radiſh, winter's bark, and nutmeg, digeſted and diſtilled. It is a good diuretic; cleanſing and removing obſtructions of the viſcera, and promoting perſpiration.

Hungary-WATER, is a liquor diſtilled in balneo mariæ, from roſemary-flowers, and ſpirit of wine well rectified. It has its name from the wonderful effects it is ſaid to have had on a queen of Hungary at the age of 72 years; being good againſt faintings, palſies, lethargies, apoplexies, and hyſterical diſeaſes: but there are ſeveral ways of preparing it.

Hyſteric-WATERS, are thoſe proper to ſtrengthen the matrix, or the womb, and remedy the diſorders that befal it. Such are thoſe of bryony, matricary, or motherwort, hyſſop, fennel, mugwort, baum, and ſmallage.

Iced, or *Frozen*-WATERS, are certain agreeable and wholſome waters, as orange-water, or the like, artificially froze in ſummer-time, particularly in hot countries, to be uſed in collations, as coolers.

Imperial-WATER, is a water diſtilled from cinnamon, nutmeg, citron-bark, cloves, calamus aromaticus, ſantal, and

and many other ſimples, infuſed in white-wine, and baum-water. This is a pleaſant cordial dram; being good againſt diſeaſes of the brain, ſtomach, and womb.

Juniper-WATER, is a compound water, made of brandy and juniper-berries beaten therein, and diſtilled.

Lime-WATER, is common water, wherein quick-lime has been ſlaked, and then filtered.

Milk-WATER, is prepared of mint, wormwood, carduus benedictus, goat's rue, and meadow-ſweet, bruiſed, infuſed in milk, and drawn off by infuſion; being held alexipharmic and cephalic.

Aqua Mirabilis, or the *wonderful* WATER, is prepared of cloves, galangals, cubebs, mace, cardomums, nutmeg, ginger, and ſpirit of wine, digeſted 24 hours, and then diſtilled; being a good carminative, and an agreeable cordial.

Nephritic-WATERS, are ſuch as ſtrengthen the reins, and help them to diſcharge by urine any impurities therein. Such are thoſe of honey-ſuckle, pellitory, radiſh, beans, mallows, and the like.

Ophthalmick, or *Eye*-WATERS, are thoſe which are good in diſorders of the eyes; as thoſe of eye-bright, vervain, fennel, plantain, celandine, and cyanus.

Plague-WATER, is prepared from the roots of angelica, maſterwort, pyony, and butter-bur; viper-graſs, water-germander, virginia ſnake-root, rue, roſemary, baum, carduus, marigold, dragon, goat's rue, and mint; the whole infuſed in ſpirit of wine, and diſtilled.

It is of frequent uſe as an alexipharmic; revives the ſpirits, and promotes a diaphoreſis; being the baſis of moſt juleps now preſcribed, eſpecially in feveriſh caſes.

Poppy-WATER, is prepared from the flowers of wild poppies, infuſed in white-wine, or brandy, and drawn off in a cold ſtill. It is a cordial, good againſt the colic, and by ſome called red plague water.

Pyony-WATER, is made of pyony, lime flowers, and lilly of the valley, ſteeped in canary and diſtilled.

Roſe-WATER, is compounded of roſes three parts, and of fennel and rue each one part; being excellent for the eyes.

Scordium-WATER, is prepared from the juices of goat's-rue, ſorrel, ſcordium, and citron, with a little Venice treacle, digeſted and diſtilled; being an alexipharmic.

Specific-WATERS, are ſuch as have ſome peculiar virtue, appropriate to certain diſeaſes. Thus, purſlain-water, wherein mercury has been infuſed, is a ſpecific againſt worms in young children.

Splenetic-WATERS, are thoſe proper againſt diſeaſes of the ſpleen; which are thoſe of tamariſk, cuſcuta, hart's-tongue, and hops.

Stephen's-WATER, is made from cinnamon, ginger, galangals, cloves, nutmegs, paradiſe-grains, aniſeeds, ſweet fennel, carraway, thyme, mint, ſage, penny-royal, pellitory, roſemary, red roſes, camomile, origany, and lavender, ſteeped in French brandy, or ſpirit of wine, and diſtilled; being a good cephalic and cardiac, and alſo reputed hyſterical.

Stomachic-WATERS, are ſuch as have the virtue to cleanſe, ſtrengthen, and confirm the ſtomach.

Styptic-WATERS, whoſe uſe is to ſtop bleeding.

Surfeit-WATER, is a water diſtilled from poppies, and other herbs, proper to cure indigeſtions.

Treacle-WATER, is directed by the college diſpenſatory to be made of green walnuts, rue, carduus, marigold, baum, butter-bur-roots, burdock, angelica, maſter-wort, water-germander, Venice-treacle, mithridate, canary-vinegar, and lemon-juice, ſteeped and diſtilled. This water is the moſt uſed of any in the ſhops; notwithſtanding Dr. Quincy decries it, as of all the worſt concerted. It is an alexipharmic and ſudorific. Other diſpenſatories give a more ſimple treacle-water, made from Venice-treacle, with an equal quantity of brandy and vinegar; which is good for ulcers, and eroſions of the mouth; eſpecially if a little Armenian bole is diſſolved therein. See *Theriaca*.

Vulnerary-WATER, is a water proper for healing of wounds, prepared from the juice of vulnerary plants.

WATER, among jewellers, is properly the colour or luſtre of diamonds and pearls; thus called, becauſe theſe were anciently ſuppoſed to be formed, or concreted of water. Thus, they ſay ſuch a pearl is of a fine water; or, the water of ſuch a diamond is muddy. The term is ſometimes alſo uſed, tho' leſs properly, for the colour or hue of other precious ſtones.

WATER-*bailiff*, is an officer anciently eſtabliſhed in all port-towns, for the ſearching of ſhips; as appears from the 28th of Henry IV. There is ſuch an officer ſtill ſubſiſting in the city of London, who ſuperviſes and ſearches all fiſh brought thither; and gathers the toll ariſing from the river Thames: he attends alſo on the Lord Mayor in his expeditions by water, and has the principal care of marſhalling the gueſts at the table. He alſo arreſts men for debt, or other perſonal or criminal matters on the river Thames, by warrant from his ſuperiors.

WATER-*born*, in the ſea-language. A ſhip is ſaid to be water-born, when ſhe lies where there is no more water than will barely keep her from the ground; or when, lying even with the ground, ſhe firſt begins to float or ſwim.

WATER-*camblets*. See *Camblet*.

WATER-*colours*, in painting, are ſuch colours as are only diluted, and mixed up with gum-water; in contradiſtinction to oil colours.

The uſe of water-colours, makes what is called limning; as that of oil-colours does painting, properly ſo called.

Cut-WATER. See *Cut*-water.

Dead-WATER, in the ſea-language, is the eddy-water that follows the ſtern of the ſhip, not paſſing away ſo faſt as that which ſlides by her ſides.

WATERFORD. A city and port-town in Ireland, ſituated on the river Sure, 8 miles N. of the ſea, and 25 miles S. of Kilkenny, in 7 deg. of W. lon. and 52 deg. 12 min. of N. lat. being one of the largeſt cities of the kingdom, and has a good foreign trade. See *Ireland*.

WATER-*gang*. A channel cut to drain a place, by carrying off a ſtream of water.

WATER-*gilding*. See *Gilding*.

WATER-*line*, of a ſhip, is a line which diſtinguiſhes that part of her under water, from that above, when ſhe is duly laden.

WATER-*man*. A perſon who plies at the ſides of rivers, particularly near the river Thames, to carry perſons going by water, to places by them appointed, for pay, in boats or wherries.

WATERMENS *company of London*. The wherrymen and lightermen of this city, and neighbouring parts, were, by an act of parliament of the 11th and 12th of William III. in 1700 and 1701, conſtituted a ſociety, or company, to be under the direction of the court of Lord Mayor and Aldermen of London, who were thereby empowered yearly to appoint eight perſons, of the beſt ſort of watermen, and three perſons out of twelve to be yearly appointed by the lightermen; which eleven perſons were to be ſtiled, "The overſeers and rulers of all the wherrymen, watermen, and lightermen, that ſhould uſe, occupy, or exerciſe any rowing upon the river of Thames, between Graveſend and Windſor, who ſhould keep good orders and obedience among the ſaid watermen and lightermen."

And by the ſaid act, the rulers and aſſiſtants of the company were likewiſe enabled yearly, in the month of June, to appoint and direct the watermen of the principal towns, ſtairs, and plying-places, between Graveſend and Windſor, to chuſe a free waterman, being a houſeholder, for each of the ſaid places, to be of their aſſiſtants, ſo that they did not exceed the number of 60, nor be leſs than 40; to whom ſhould be added 9 lightermen; who together ſhould compoſe the number of aſſiſtants of the ſaid company.

And by the ſaid act, the ſaid overſeers and rulers were impowered to appoint any number of watermen, not exceeding 40, to ply and work on Sundays between Vauxhall and Limehouſe, at ſuch ſtairs, and plying places, being 17 in number, beſides the two at Weſtminſter, as they ſhould judge convenient for carrying paſſengers acroſs the river Thames for one penny each: that the money ariſing thereby, amounting in the whole to upwards of 1450 l. *per annum*, including that of Weſtminſter

minſter, ſhould, by each of the working watermen, be paid every Monday to the order of the ſaid rulers; who, after having paid the ſaid watermen their proper wages, ſhould apply the ſurplus to the uſe of the poor of the company. And that every perſon employed in the Sunday's work, that ſhould neglect to pay in the money ſo earned by him, ſhould, for every ſuch offence, forfeit and pay the ſum of 40 s.

The watermen of the city of Weſtminſter, being exempt from the immediate direction of the company of watermen in this affair, annually appoint their own watermen, to ply and work on Sundays, for carrying paſſengers acroſs the river Thames, from and to Weſtminſter-bridge and Stangate, and the horſe-ferry at Lambeth; which money, ſo earned, is applied to the uſe of the poor watermen, or their widows, of the pariſh of St. Margaret in the ſaid city.

It is alſo declared by the ſaid act, that if the Lord High Admiral, or commiſſioners of the admiralty, ſhould at any time give notice to the company of watermen, that there is occaſion for a certain number of the ſaid company to ſerve on board the royal navy; then all ſuch perſons as ſhould be duly ſummoned for that purpoſe, that ſhould not appear before the overſeers and rulers aforeſaid, ſhould not only ſuffer impriſonment for one month, but likewiſe be rendered incapable of enjoying any privilege belonging to the company for two years.

By the conſtitutions of this company, all boats and barges belonging to the ſeveral members thereof, are obliged to be numbered and entered into the company's regiſter. The number of the former amount to about 6000, and of the latter to between 7 and 800. But as many watermen keep a plurality of boats, to let to their poor brethren, all of the ſame number, the number total employed upon the river Thames cannot be aſcertained, tho' it is very probable, they amount to above 1000 more than are regiſtered, which makes the whole about 7000; and the barges of the ſame number, being much more numerous than thoſe of the wherries, amount to upwards of 1700.

The wherries and boats are employed in carrying the citizens to and from the ſeveral parts of the city and ſuburbs; therefore, to prevent their being impoſed upon by the watermen in any ſort, their boats, as already mentioned, are not only numbered; but the rates and prices are fixed, as they were appointed by the Lord Mayor and court of Aldermen of the city of London, which are to be taken by the reſpective watermen, rowing upon the river Thames between Graveſend and Windſor.

WATER-*meaſure*. Salt, ſea-coal, and other merchandiſe, while aboard veſſels in the pool, are meaſured with the corn-buſhel heaped up; or elſe five ſtriked pecks are allowed to the buſhel; which is called water-meaſure, and exceeds Wincheſter meaſure by about 3 gallons in a buſhel. See *Chaldron*, and *Meaſure*.

WATER-*ſhot*, in the ſea language, a ſort of riding at anchor, when a ſhip is moored neither croſs the tide, nor right up and down, but quartering betwixt both.

WATER-*way*, in a ſhip, is a ſmall ledge of timber, lying fore and aft on the deck, cloſe by her ſides, to keep the water from running down there.

WATER-*work companies of London*. In the year 1236, the merchants of Amiens, Nele, and Corby, gave to the mayor and citizens of London the ſum of 100 l. for certain privileges to them before granted, towards the bringing of water to the city from Tyburn; which the citizens were impowered to do, by virtue of a grant from Gilbert de Sandford, to the mayor and commonalty of the city; and which the citizens at this time began to put in execution; by bringing water from 6 fountains, or wells, in that neighbourhood, through a leaden pipe of 6 inches bore, to the city: to which chargeable undertaking many of the citizens contributed very largely.

In the year 1439, the abbot of Weſtminſter granted to Robert Large, the mayor, and citizens of London, and their ſucceſſors, one head of water containing 26 perches in length, and one in breadth, together with all its ſprings, in the manor of Paddington: in conſideration of which grant, the city was for ever to pay to the ſaid abbot and his ſucceſſors, at the feaſt of St. Peter, two pepper corns: but, if the intended work ſhould happen to draw the water from the ancient wells in the manor of Hida, then the aforeſaid grant ſhould ceaſe, and become entirely void. Henry VI. not only confirmed this grant to the mayor and citizens; but likewiſe, by a writ of privy ſeal, granted them a power to purchaſe 200 fodders of lead, for the intended works of pipes and conduits, and to impreſs plumbers and labourers, for carrying on the ſame; always provided, that their wages ſhould be punctually paid.

In the year 1535, two fifteenths were granted by the common council of the city for defraying the expence of bringing water from Hackney to Aldgate, where a convenient conduit was erected for it on the ſouth-ſide the ſtreet, juſt without the gate, which proved very uſeful to the inhabitants in the eaſtern parts of the city.

But, notwithſtanding the great expence the citizens of London had been at, to bring water to, and erect conduits in the city, it was now found by experience, that there was not near a ſufficient quantity to ſupply the common demands; therefore, upon application to parliament, an act was paſſed, whereby the mayor and citizens were impowered to bring water to the city from Hamſtead-heath, St. Mary-le-bon, Hackney, and Muſwell-hill, upon their indemnifying the owners of all lands.

The New-river company. Various were the projects in the reigns of Queen Elizabeth and King James I. for ſupplying the city of London with a ſufficient quantity of water, for domeſtic uſes: but all remained unattempted, till Sir Hugh Middleton, citizen and goldſmith of London, who had conſiderably enriched himſelf by a copper or ſilver mine in Cardiganſhire, propoſed to the Lord Mayor, and commonalty, to undertake the ſame on his own account, to be begun within the term of two months, and by his beſt endeavours finiſhed in four years.

Some time after, thoſe that ſhared in the New River water, being 29 in number, were incorporated by letters-patent of the 21ſt of June 1619; and tho' King James was a proprietor of one half of the whole work, Middleton, to prevent the direction of the affairs from falling into the hands of courtiers, precluded him from having any ſhare in the management thereof; only allowing him a perſon to be preſent at the ſeveral courts and meetings of the company, to prevent injuſtice to his royal principal.

Sir Hugh Middleton afterwards became in poſſeſſion of the royal moiety; when he divided the ſame into 36 ſhares, anſwerable to thoſe of the other half, called the adventurers, which he not only diſcretionally burdened with the aforeſaid fee farm rent of 500 pounds *per annum*, but he likewiſe ſubjected two of the adventurers ſhares for the payment of the ſaid annuity.

The ſhares belonging to this company being 72 in number, one half thereof are denominated the *Adventurers*, and the other the King's. The proprietors of the former, as above mentioned, being originally 29 in number, the government of the company's affairs was lodged in their hands: but many of the adventurers ſhares being, by alienation, divided into fractional parts, the Lord Chancellor Cowper, in 1711, decreed in favour of their ſeveral proprietors, that the poſſeſſors of two or more fractional parts of a ſhare, may jointly depute a perſon to repreſent them in the government of the company. Whereupon every perſon ſo deputed, becomes capable of being elected one of the 29 repreſentatives of the whole, who are entruſted with the direction of the companies affairs as aforeſaid.

As, by what has been ſaid, it appears, that the holders of the King's ſhares are precluded the government of the company, their ſhares excluſive of their being burdened with the aforeſaid annuity, are not quite ſo valuable as thoſe adventurers, which at preſent are worth 5000 guineas, or 5250 l. each.

By an exact menſuration of the courſe of the New River, taken by Henry Mill, ſurveyor to the company in 1723, it appeared to be 38 miles, three quarters, and 16 poles in length.

Over this river are 43 ſluices, and 215 bridges. It is carried over two vales in wooden frames lined with lead;

that at Bushill being 660 feet in length, and 30 in height; and the other at Highbury 462 feet in length, and 17 in height. In the neighbourhood of Islington it is ingulphed by 58 main pipes of a bore of 7 inches; whereby it is conveyed to the city, and suburbs of London, and is taken in to upwards of 30,000 houses.

This corporation consists of a governor, deputy-governor, treasurer, and 26 directors. The officers and servants belonging to the company, besides the above mentioned, are a clerk and his assistant, a surveyor and his deputy, 14 collectors, who after deducting 5 *per cent.* for collecting the companies rents, pay their money every Thursday to the treasurer; 14 walksmen, who have their several walks along the river, to prevent throwing in filth or infectious matter; 16 turn-cocks, 12 paviours, and 20 borers of pipes; besides horse engines for boring of others, together with a great number of inferior servants and labourers.

London-bridge WATER-*works*. This scheme being approved of, the Lord Mayor and common-council, as an encouragement of the ingenious engineer to proceed in so useful an undertaking, granted him the use of one of the arches of London-bridge to place his engine in, for the better working thereof: but, one machine not proving sufficient for raising the quantity of water required, his successors have been allowed two other arches, wherein to erect more engines, which now are five in number; and from which run 8 main pipes of a 7 inch bore, to supply a great part of the city with water.

Hamstead-WATER-*works*. To this office, which is kept in Denmark-street, St. Giles's, belong two main pipes of a 7 inch bore, which bring water into the ponds of Highgate and Hampstead to supply the neighbourhood.

Merchants-WATER-*works*. There are three engines belonging to this office for raising water: first, a windmill in Tottenham-court-road fields, and two others, wrought by the common shewer at Tom's coffee-house in St. Martin's, and Hart's-lanes in the Strand; whence issue 3 main pipes of 6 and 7 inch bores, whereby those neighbourhoods are supplied with water. This company, like others, after the defraying all charges, divide the profit half yearly.

Shadwell-WATER-*works*. This office is kept in Shadwell, and its engine is wrought by horses, who supply 2 main pipes of a 6 and 7 inch bore with Thames water, wherewith that neighbourhood is plentifully furnished.

Rotherhithe-WATER-*works*. This office is kept at the upper end of Rotherhithe-wall, and lower end of Mill-street, where the water-engine belonging to the same is wrought by water from the river Thames, which being brought in by the tide, is contained in canals in the streets adjacent. By this engine a sufficient quantity of water is raised to supply two main pipes of a 6 inch bore each, whereby the neighbourhood is plentifully supplied with Thames water.

York-buildings-WATER-*works*. This company was incorporated by act of parliament, in 1691, for raising Thames water in York-buildings, to supply that neighbourhood. But the directors of the same, by purchasing estates, erecting new water-works, and other pernicious projects, have almost ruined the corporation. However, their chargeable engine for raising water by fire, being laid aside, they continue to work that of horses, which together with their estates in England and Scotland may in time restore the company's affairs.

Chelsea-WATER-*works*. This society was incorporated by act of parliament, in the year 1722, by the name of The governor and company of Chelsea water-works; by which name they are to have perpetual succession, and a common seal; with a power to purchase in mortmain, lands and tenements to the amount of 1000 l. a year, with a right to alienate and dispose of the same, as they should see convenient. By virtue of this act of incorporation, they made canals and basons, erected dams and mills for raising water to supply the city of Westminster and parts contiguous, and divided the works into 2000 shares, which are under the management of a governor, deputy, and 13 directors.

WATERING, in the manufactures. To water a stuff, is to give it a lustre, by wetting it lightly, and then passing it through the press, or the calender, whether hot or cold. See *Calender*, *Tabby*, and *Pressing*.

WAVE, in physicks, a cavity in the surface of the water, or other fluid, with an elevation on the side. The origin of waves may be thus conceived. The surface of a standing water being naturally plain, and parallel to the horizon; if by any means it is rendered hollow, its cavity will be surrounded with an elevation; this raised water will descend by its gravity; and, with the celerity acquired in descending, form a new cavity, while there is a new elevation; and, when this last is depressed, the water rises anew towards the same part. Thus arises a successive motion in the surface of the water, and a cavity; which cavity, with the elevation next to it, is called a wave; and the space taken up by the wave on the surface of the water, and measured according to the direction of the wave's motion, is called the breadth of the wave.

WAVE-*camblets*. See *Camblet*.

To WAVE, is used in the sea-language, for the making signs for a vessel to come near, or keep off. See *Signal*.

WAVESON, in the admiralty law. A term used for such goods as, after shipwreck, appear swimming upon the waves. See *Flotson*.

WAX. A yellowish matter, of which the bees form cells to receive their honey. See *Honey*.

WAX, is not the excrement of this laborious insect, as the ancients, and after them, many of the moderns imagined; but is properly a juice, exuding out of the leaves of plants, and adhering to the surface thereof; from which it is scraped off by the bees, with their rough thighs, to build their combs. It is chiefly afforded by lavender and rosemary; from which last any person may gather wax; and, with the assistance of the microscope, the wax may be plainly seen sticking on the leaves of the plant: so that wax is not an animal, but a vegetable substance.

Wax makes a very considerable article in commerce; the consumption thereof, throughout the several parts of Europe, being incredible. There are two kinds, white and yellow: the yellow is the native wax, just as it comes out of the hive, after expressing the honey: the white is the same wax, only purified, washed, and exposed to the air. The preparation of each is as follows.

Yellow-WAX. To procure the wax from the combs for use: after separating the honey from them, they put all the matter remaining into a large kettle, with a sufficient quantity of water, where, with a moderate fire, they melt it, and then strain it thro' a linen cloth, by a press: before it is cold they scum it with a tile, or piece of wet wood, and cast it, while yet warm, in wooden, earthen, or metalline moulds; having first anointed them with honey, oil, or water, to prevent sticking. Some purify it with Roman vitriol, or copperas; but the true secret is to melt, and scum it properly without any ingredient at all. The best is that of a high colour, an agreeable smell, brittle, and that does not stick to the teeth when chewed. It is often sophisticated with rosin, or pitch, coloured with rocou, or turmeric. By chemistry, wax yields a white thick oil, resembling butter; whence the chemists call it butter of wax. From this oil is drawn a second, as clear as water: both the one and the other being excellent for chilbains. The fæces remaining in the bag after expressing the wax, is used by surgeons and farriers with success against strains.

White-WAX. The whitening or blanching of wax is performed by reducing the yellow sort, first into little bits, or grains, by melting and throwing it, when hot, into cold water, or else by spreading it into very thin leaves, or skins. This wax, thus granulated or flatted, is exposed to the air on linen cloths; where it rests night and day, having equally need of sun, and dew. Then they melt and granulate it over several times, still laying it out to the air, in the intervals, between the melting. When the sun and dew have at length perfectly blanched it, they melt it for the last time, in a large kettle; out of which, they cast it, with a ladle, upon a table covered over with little round dents or cavities, of a form of the cakes of white wax sold by the apothecaries; having first wet those moulds

moulds with cold water, that the wax may be the eaſier got out. Laſtly, they lay out theſe cakes to the air for two days and two nights, to render it drier and more tranſparent. This wax is uſed in the making of torches, tapers, flambeaux, figures, and other wax-works. It is alſo an ingredient in plaiſters, cerats, and divers pomatums; likewiſe in unguents for the complexion.

Yellow wax is made ſoft with turpentine; yet retains its natural colour. Red wax is only the white melted with turpentine, and reddened with vermillion, or orcanette. Verdegreaſe makes it green; and burnt paper, or lamp-black, make it black. Some travellers tell us of a natural black wax; aſſuring us there are bees, both in the Eaſt and Weſt Indies, that make an excellent honey included in black ſhells; of which wax the Indians make thoſe little vaſes, wherein they gather their balſam of Tolu.

Virgin-WAX, is a ſort of reddiſh wax, uſed by the bees to ſtop up the clefts or holes of the hive. It is applied juſt as taken out of the hive, without any art or preparation of boiling; which is the moſt tenacious of any, and eſteemed good for the nerves.

Several ſorts of wax are ſold at Amſterdam, valued according to the places they are brought from. Yellow Poliſh wax coſts uſually about 6 s. ſterling the 100 lb. and the deduction for prompt payment is one *per cent.*

The price of Ruſſia wax is much the ſame.

The conſumption of wax is very great in Spain, and the Weſt Indies; ſo that, as moſt part of it comes from abroad, foreigners drain the Spaniards of conſiderable ſums by means of this commodity.

The Spaniards conſider white wax as a manufacture, and as ſuch they ſhould diſcourage its importation by advanced duties; as the king of France did, at the ſame time he gave leave to export it free.

By the ſtatute of the 23d of Elizabeth it was enacted, That every perſon who ſhould, in the making and melting of wax, uſe any deceit, by mingling the ſame with roſin, tallow, turpentine, or other deceitful thing, to ſell the ſame, or offer the ſame to be ſold for wax, ſhould forfeit the corrupted wax; and if the ſame was ſold before ſuch fault was found, the melter or procurer thereof ſhould forfeit for every pound 2 s.

Sealing-WAX, or *Spaniſh Wax*, is a compoſition of gum-lacca, melted and prepared with roſin and chalk, and coloured red with ground cinnabar. See *Lacca*.

WAX-*Candles*. See *Candle*.

WAX-*Chandlers*. Tradeſmen who make candles of bees wax.

WAX-*chandlers company of London*, was incorporated by letters-patent of the firſt of Richard III. dated the 16th of February 1483, by the appellation of The maſter, wardens, and commonalty of the art or myſtery of wax-chandlers of London; who are governed by a maſter, two wardens, and 20 aſſiſtants, with 113 liverymen; whoſe fine of admiſſion is 5 l. and they have a handſome hall in Maiden-lane where they manage their affairs.

WAY *of a ſhip*, is ſometimes uſed for the ſame with the rake, or run of her, forward and aftward on: but the term is more commonly underſtood in reſpect of her ſailing. When ſhe goes apace, they ſay ſhe has a good way; and they call the account how faſt ſhe ſails by the log, keeping an account of her way; but, becauſe moſt ſhips are apt to fall a little to the leeward of their true courſe; they always, in caſting up the log-board, allow ſomething for her leeward way; which is one point or more according to her way of ſailing.

Gang-WAY. See *Gang* way.

Hatch-WAY. See *Hatch* way.

WAYWODE, is properly a title given the governors of the chief places in the dominions of the Czar of Muſcovy.

The palatines, or governors of provinces in Poland, alſo bear the quality of waywodes, or waiwodes.

The Poles likewiſe call the princes of Walachia and Molvia waywodes; as eſteeming them no other, than on the foot of governors; pretending that Walachia and Moldavia are provinces of Poland, which have withdrawn themſelves from the allegiance of the republic.

Du Cange ſays, that the name waywode is uſed in Dalmatia, Croatia, and Hungary, for a general of an army; and Leunclavius, in his pandects of Tartary, tells us, it uſually ſignifies captain, or commander.

WEALD, or *Weld*. The woody part of a country, as the weald of Kent: which, miſprinted in ſome books and maps, is called the Wilds of Kent, Suſſex, and Surry.

WEANEL. A country word, for a young beaſt newly weaned, or taken from ſucking its dam.

WEAR, or *Weer*. A great ſtank, or dam in a river, fitted for the taking of fiſh, or for conveying the ſtream to the mill.

WEATHER-*glaſſes*. Are inſtruments contrived to indicate the ſtate or diſpoſition of the atmoſphere, as to heat, cold, gravity, and moiſture; to meaſure the changes befalling in thoſe reſpects; and by ſuch means to predict the alteration of weather, as rain, winds, and ſnow. Under the claſs of weather-glaſſes, are comprehended barometers, thermometers, hygrometers, manometers, anemometers; of each whereof there are various kinds.

WEATHER-*board*, in the ſea-language, that ſide of a ſhip which is to the windward.

WEATHER-*gage*, at ſea. A ſhip is ſaid to have the weather-gage of another, when ſhe is to windward of her.

WEATHERING. A doubling, or ſailing by a point or place: and to weather a ſhip is to get to the windward of her.

WEAVER. An artificer whoſe employment is weaving. See *Weaving*.

WEAVERS *company of London*, which was denominated Telarii, ſeems to be the moſt ancient guild of this city; for it appears, that in the reign of Henry I. they paid an annual rent of 16 l. for their immunities. Their privileges were confirmed at Winchester, by letters-patent of Henry II. ſtill in the company's poſſeſſion, but without date, wherein the annual ſum payable to the crown is fixed to two marks of gold, to be paid yearly at Michaelmas, upon a penalty of 10 l.

This company originally conſiſted of the cloth and tapeſtry weavers, who appear to be a very turbulent and litigious people; inſomuch, that the mayor and citizens of London, to quit themſelves of thoſe troubleſome gueſts, offered King John the ſum of 60 marks, as a full ſatisfaction for the annual ſum of 12 l. which he received of them, to diſſolve their ſociety; which in ſome meaſure ſhews the exceſſive intereſt of money, and ſmall value of land at that time. However, tho' the money offered had not the deſired effect; yet it ſo intimidated the weavers, that they became ſo jealous of the mayor and citizens, as to remove their charter from the city to the Exchequer, where they depoſited the ſame for ſecurity: and though the king would not aboliſh the company, he took the advantage of raiſing their rent from 12 l. to 20 marks *per annum*.

The company, perceiving they were not a match for the mayor and citizens, began to vent their ſpleen upon the linen weavers, whom they intended intirely to ſuppreſs: but how the conteſt te minated is not mentioned, no more than whether the charter granted them by Henry II. was the firſt, or only a renewal of former privileges. Be that as it will, they were, by act of parliament of the 7th of Henry IV. put under the government and correction of the court of Lord Mayor and Aldermen of the city of London.

They conſiſt of 2 bailiffs, 2 wardens, and 16 aſſiſtants, with a livery of 279 members; whoſe fine on admiſſion is 6 l. and they have a handſome hall in Baſinghall-ſtreet, where they manage their buſineſs.

WEAVING. The art, or act of working a web of cloth, ſilk, linen, or other ſtuff, on a loom, with a ſhuttle.

It is difficult to ſay, with any aſſurance, who it is we owe this admirable invention to; unleſs we chuſe to aſcribe it to the ſpider, that ingenious little inſect, which draws certain infinitely fine threads, from its own ſubſtance, thro' papillæ near its anus.

WEAVING *of cloth*. See *Cloth*.

WEAVING *of Tapeſtry*. See *Tapeſtry*.

Stocking-WEAVING. See *Stocking*.

WEB. A ſort of tiſſue, or texture, formed of threads interwoven

terwoven with each other; ſome of which are extended in length, and called the warp; and others drawn acroſs them, called the woof.

WEED. A common name for all rank and wild herbs that grow of themſelves, to the detriment of other uſeful herbs they grow among.

Dyers-WEED, or *Wood-wax*. See *Dying*.

Fullers-WEED. See *Thiſtle*.

WEED, in the miners language, denotes the degeneracy of a load, or vein of fine metal, into a uſeleſs marcaſite.

WEEK, or *Wyck*. A borough and port-town of Scotland, in the ſhire of Cathneſs, ſituated on the German ſea, 20 miles S. of Dungſbyhead, in 2 deg. of W. lon. and 48 deg. 40 min. of N. lat.

WEEN, or *Huen*. A little iſland in the Sound, lying in 13 deg. 15 min. of E. lon. and 55 deg. 49 min. of N. lat. being the entrance to the Baltic ſea, ſituated 16 miles N. of Copenhagen, and ſubject to Denmark.

WEFT. A kind of web, or thing woven: as a weft, or treſs of hair.

WEIGH, *Way*, or *Wey*. A weight of cheeſe, wool, or the like, containing 256 pounds avoirdupois. Of corn, the weigh contains 40 buſhels; of barley, or malt, 6 quarters. In ſome places, particularly in Eſſex, the weigh of cheeſe is 300 pounds. See *Meaſure*, and *Weight*.

WEIGHER. An officer in ſeveral cities, appointed to weigh the commodities bought or ſold, in a public balance. Theſe weighers are generally obliged by oath, to do juſtice to both parties; and to keep a regiſter of the things they weigh. In Amſterdam there are twelve weighers, eſtabliſhed into a kind of office. As it was formerly allowed them to touch the ſtrings of the balance of weighing, it was eaſy for them to favour either the buyer or ſeller, according as the one gave them more money than the other. To prevent which abuſe, it was charged on them, by an ordinance of the burgo-maſters in 1719, not to touch the balance in any manner whatever.

WEIGHING. The act of examining a body in the balance to find its weight. The diſtillers in London weigh their veſſels when full, and for half a hogſhead, which is 31 gallons and a half, allow two hundreds, one quarter, and eleven pounds, for the caſk and liquor: for a puncheon, they allow ſix hundred, one quarter, and two pounds: for a canary pipe eight hundred, a half, and ſeventeen pounds.

WEIGHING-*anchor*, in the ſea-language, is the drawing up the anchor out of the ground it had been caſt into; in order to ſet ſail, or quit a port, road, or the like. The anchor is ordinarily weighed or recovered, by means of the capſtan, and ſometimes by a windlaſs.

WEIGHT, in commerce, denotes a body of a known weight, appointed to be put in the balance againſt other bodies whoſe weight is required. Theſe weights are uſually of lead, iron, or braſs; tho', in many parts of the Eaſt Indies, they are common flints, and in ſome places a ſort of little beans. The ſecurity of commerce depending in a good meaſure on the juſtneſs of theſe weights, there is ſcarce any nation but has taken proper means to prevent the falſification thereof. The ſureſt way is the ſtamping or marking them by proper officers, from ſome original or ſtandard, depoſited where recourſe may be had to them. This expedient is very ancient, and many authors are of opinion, that, what among the Jews was called ſhekel of the ſanctuary, was not any particular kind of weight, different from the common one; but a ſtandard or original weight, preſerved by the prieſts in the ſanctuary. Thus alſo, in England, the ſtandard of weights is kept in the exchequer, by a particular officer called the clerk, or comptroller of the market. In France, the ſtandard weight is kept under ſeveral keys, in the cabinet of the Cour des Monnoyes.

Moſt nations wherein there is any thing of commerce flouriſhing, have their particular weights; and even ſometimes different weights, in the different provinces, and for the different kinds of commodities. This diverſity of weights makes one of the moſt perplexing articles in commerce; but it is irremediable. The reducing the weights of different nations to one, is not only impracticable, but even the reduction of thoſe of the ſame nation: witneſs thoſe vain attempts made for reducing the weights in France, by ſo many of their kings as Charlemaign, Philip the long, Louis XI. Francis I. Henry II. Charles IX. Henry III. and Louis XIV. Weights may be diſtinguiſhed into ancient and modern, foreign and domeſtic. Modern weights uſed in ſeveral parts of Europe, and the Levant.

Engliſh-WEIGHTS. By the 27th chapter of Magna Charta, the weights are to be the ſame all over England; and the people having been grievouſly impoſed upon by falſe weights and meaſures in moſt parts of the kingdom; for the redreſſing thereof, the parliament in 1496 enacted, that the knights, citizens, barons of the cinque ports, and burgeſſes in parliament, ſhould receive proper ſetts of the ſundry ſorts of weights and meaſures, the king had ordered to be made in braſs, according to the original ſtandards in the exchequer, to be depoſited in ſuch places as were mentioned in the ſaid act, where they were to remain as perpetual patterns for the inhabitants of the ſeveral counties, cities, and towns, to make their reſpective weights and meaſures by, for the eaſe and ſafety of the ſubjects in all parts of the kingdom. Nevertheleſs, there are ſor different commodities, two different ſorts, namely, troy weight, and avoirdupois weight: the origin from which they are both raiſed, being the grain of wheat gathered in the middle of the ear. See *Meaſure*.

The troy weight contains 24 grains to a penny weight, 20 dwts. to an ounce, and 12 ounces to a pound; being uſed only in weighing bread, gold, ſilver, and by the apothecaries in their medicines. 8 lb. troy is a gallon, 16 lb. a peck, and 64 lb. a buſhel; whereby weight and meaſure are reduced into one another.

Wet meaſure is alſo derived from this pound troy, both on land and on ſhipboard, as alſo grain and corn; for firſt, theſe 12 ounces, made into a concave meaſure, is named a pint, 8 of theſe pints make a gallon, containing 231 cubical inches, of wine, brandy, cyder, &c. according to the ſtandard of the exchequer. From hence is alſo drawn the aſſize meaſure of all vendible caſks: a hogſhead is to contain 63 gallons, a tierce 42 gallons, a pipe 126 gallons, and a ton 252 gallons, which weighs 1890 lb. avoirdupois, or 2016 lb. troy.

The refiners weights are ſtill a part of the troy, the leaſt of which is the blank; whereof 24 make a periot, 20 periots make a mite, 20 mites a grain, &c. and what they call caracts, are the $\frac{1}{24}$ part of a pound, an ounce, or any other weight.

The jewellers weights, made uſe of in weighing of jewels and other precious ſtones, are the parts of an ounce troy; which they divide into 152 parts, called caracts; and theſe caracts are again divided into grains, or $\frac{1}{4}$, and into $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$, $\frac{1}{64}$, &c. parts.

Table of Troy weight as uſed by the Goldſmiths.

The rotulo of 144 drams at Cairo for gold and and ſilver, weighs - -	6886⅔
Ditto of Damaſcus of 720 drams	3443⅓

In avoirdupois weight 16 drams is one ounce, 16 ounces is one lb. and 28 lb. make a quarter of a hundred weight, or 112 lb. and 20 hundred weight, or 2240 lb. weight avoirdupois is a ton weight. This weight is in uſe for weighing all groſs goods, ſuch as ſugars, hemp, flax, butter, cheeſe, &c. of which there are three quintals.

1. Of 100 lb. by which ſugars, &c. are bought and ſold in the Engliſh ſettlements in America.
2. Of 112 lb. by which all groſs goods are weighed throughout England.
3. Of 120 lb. called the ſtannary hundred, by which tin, &c. is weighed.

Wool is commonly bought by the tod: 7 lb. avoirdupois makes a clove, 14 lb. a ſtone, 28 lb. a tod, 182 lb. a wey, 364 lb. a ſack, 436 lb. a laſt; that is, 2 cloves is 1 ſtone, 2 ſtone is one tod, 6½ tod one wey, 2 weys one ſack, and 12 ſacks is a laſt. But when it is ſtapled or ſorted, it is ſold by the pack containing 6 ſcore, or 120 lb.

Lead is ſold by the fodder, and a load is 175 lb.

A fodder at London weighs 19½ C. wt.
at Newcaſtle 21 -
at Stockholm - 22 - } 112 lb. to the C.
at Hull - 19½ C. ſtannery weight of 120 lb. to the C.

From this lb. avoirdupois of 16 ounces, there are formed ſeveral other weights: a ſtone of 7 lb. 8 lb. 10 lb. 14 lb. 16 lb. 20 lb. and ſometimes a clove of 7 lb. 8 lb. and 10 lb. and ſometimes a tod of 20 lb. 28 lb. 32 lb. &c.

Raw ſilk from Perſia and Turkey is ſold by this lb. but a lb. is accounted 24 ounces, or 1½ lb. Of gun-powder, 100 lb. avoirdupois is a barrel, and 24 barrels a laſt.

Cheeſe and butter from Eſſex are weighed by the clove, or ½ ſtone, 8 lb. a clove, 2 clove, or 16 lb. a ſtone; 16 ſtone, or 32 clove, or 256 lb. a wey: but in Suffolk they allow 42 clove, or 336 lb. to the wey.

A firkin of butter ſhould weigh 56 lb. and a firkin of ſoap 60 lb. 4 firkins of either making a barrel.

Biſhop Cumberland ſays, that the Engliſh avoirdupois ounce, is the ſame as the Roman ounce, and was probably introduced into this kingdom by the Romans, when they gave laws and planted colonies here, and hath thence continued unchanged to this day; which is not commonly obſerved, becauſe we uſe the avoirdupois weights only about heavier commodities; not in weighing ſilver and gold, which are weighed by the troy ounce; which the biſhop ſuppoſes was introduced by the Normans, becauſe it takes its name from a French town, Troys in Champagne.

Flanders.

Antwerp. Their common weight is a quintal, or 100 lb. and they reckon 16 ounces to the pound; and 100 lb. of their weight has been found to make 103½ lb. avoirdupois in London, 94⅘ in Amſterdam, 110 in Lions, 96½ in Hamburgh, 99½ in Leipſick, and 137½ in Leghorn. But their weights for their monies, gold and ſilver, are reckoned as follow; 32 grains is one penny weight; 20 denier-weights, or penny-weights, is 1 ounce; and 8 ounces make 1 mark or pound; and 100 lb. troy weight of London makes about 112 of thoſe marks.

Holland.

Twenty four grains is one dram; 3 drams, or 72 grains, is a groſs; 30 grains is one engel; 10 engels, or 4 groſs and 2 grains, is one loot; 16 loots, or 8 ounces, is one mark; 2 marks is one pound; 8 pounds is one ſtone; 165 lb. is one waggon, or wage; 400 pound is one load; 15 lb. is one liſpond; and 20 liſponds is one ſchippond. Thirty-two aces is an engel; 20 engels is one ounce; and 8 ounces is a mark. The above weights are uſed among them in weighing groſs gold; but in weighing or fining of gold, 24 parts are reckoned to a grain, 12 grains to a caract, and 24 caracts to a mark; the mark weights being about 1 *per cent.* lighter than the troy weight of London. Salt is ſold in Amſterdam by a great hundred of 404 ſcheppels, which is reckoned 7 laſts, or 14 ton, or 28,000 lb. weight; which is alſo counted 208 ſacks; and is ſold by the pound Flemiſh; 11½ laſts of Amſterdam making about the great hundred in the iſle of Rhe in France.

Geneva.

100 lb. of Geneva makes 112½ lb. in Amſterdam, 128 lb. in Marſeilles, 123 lb. in London, 114½ lb. in Hamburg, and 130 lb. in Lions.

Germany.

Hamburgh. 2 loodt is 1 ounce, 16 ounces is 1 pound, 10 lb. is a ſtone of wool or feathers, 14 lb. is a liſpound, 20 lb. is a ſtone of flax, 8 liſpounds is 1 centner, and makes about 120 lb. avoirdupois in London; 16 lb. is a liſpound, 20 liſpounds is a ſchippound of feathers or wool, and 16 liſpounds is a tun of butter or tallow.

100 lb. of Hamburgh makes 98 lb. in Amſterdam, 103½ lb. in Antwerp, and 107¼ lb. in London.

Franckfort. 100 lb. in Frankfort makes in Hamburgh 104 lb. in Amſterdam 102 lb. in Lions 108 lb. in London 112 lb. and in Leipſick 107 lb.

Nuremburg. 100 lb. makes 107 lb. in Hamburgh. Their weights for gold and ſilver are reckoned as follows; 4 feſtercias is one penny, or numile; 4 numiles is one quint; 4 quints is one loat; and 16 loats, or loots, is one mark; 116 marks making 100 lb. troy weight of London.

Vienna. Their weight is a pound, which in ſome commodities is divided into 32 loots; and in others, into 28 pints. Their 100 lb. makes in London about 123 lb.

Leipſick. 100 lb. weight of Leipſick makes 95 lb. in Amſterdam, 110½ lb. in Lions, 104 lb. in London, 96 lb. in Hamburgh, 93 lb. in Frankfort, and 138 lb. in Leghorn.

Breſlaw. 100 lb. of their weight makes 100 lb. in Hamburgh.

Bremen. The Bremen weight is about 3 *per cent.* lighter than that of Amſterdam; ſo that 100 lb. in Amſterdam makes 103 lb. in Bremen, and 100 lb. of Bremen 97 lb. of Amſterdam.

Denmark and Norway.

10 lb. is a ſtone, and 12 ſtone is a canter, or 120 lb. 32 ſtone, or 320 lb. is a ſhippound: and 100 lb. in London makes in theſe countries about 92 lb.

Poland, Pruſſia, and Dantzick.

The common weight of Poland is the pound, of which 136 lb. is a quintar, and makes in London about 114 lb.

Pruſſia. Their weights for fine goods are of the ſmall ſtone of 24 lb.; 16 lb. is a liſpound, and 20 liſpounds is a ſhippond of 320 lb. But their groſs or bulky goods are weighed by the ſtone of 34 lb. 10 whereof go to a ſhippond of 340 lb. and 116 lb. of their weight makes about 100 lb. in London.

Dantzick. 34 lb. is a ſtone, 10 ſtone a ſhippond, and 6

ſhippond, or 60 ſtone, is a laſt of hemp, flax, and ſuch light goods; which makes in London about 17 C. and 7 lb. avoirdupois, and 100 lb. Dantzick wt. makes 90 lb. in Hamburgh. But for pot-aſhes the laſtage is reckoned double; as 12 ſhipponds of pot-aſhes take up no more room in a ſhip than 6 ſhipponds of hemp or flax.

There is likewiſe uſed in Dantzick a weight called a ſmall ſtone, for pepper, ſpices, grocery, and ſome other commodities; which ſmall ſtone weighs but 24 lb. Dantzick-weight.

Tin is ſold here by the the centner of 120 lb. which makes in London about 112 lb.

The hundred of Brouage ſalt in France renders here 11½ or 12 laſts; and 7⅛ or 7½ of theſe laſts make the great hundred in Amſterdam.

Strangers may ſell ſalt to the inhabitants, but they are not ſuffered to ſell to any elſe; nor will they permit ſtrangers to tranſport it through their town, to ſell to the other people in the country in any other place.

Oaken planks, wainſcot, and pipe-wood, are all ſold by the ſhock.

Clap boards, and fat-wood, are ſold by the great hundred, which is 48 ſhocks.

Koninſburg. 40 lb. is a ſtone, 10 ſtone is a ſhippond, and 6 ſhippond or 60 ſtone is a laſt for hemp, flax, and ſuch light goods; making in London ſomewhat above 18 C. wt.

Tin is ſold by the centner of 128 lb. which makes in London 112 lb.

The hundred of Brouage ſalt in France makes 10 laſts of this place; but ſtrangers are not allowed here to keep ſalt in ſtorehouſes for ſale.

Sweden.

20 lb. is a liſpound, 20 liſpound is a ſhippond, and 7½ ſhippond is reckoned to make about one tun, or 20 C. wt. avoirdupois in London.

6 Shippond is a laſt of flax, hemp, cordage, and tallow.

1 center of gun-powder is 120 lb.

Ruſſia.

Riga. 20 pounds is a liſpound, and 20 liſpounds is a ſhippond; ſo that a ſhippond is 400 lb. in Riga, and 6 ſhipponds is a laſt, making in London about nineteen hundred and a half.

Revel. 20 lb. is a liſpound, 20 liſpounds is a ſhippond, and 6 ſhippond is a laſt, making about 20 C. wt. 4 lb. in London.

Narva. Their weights; 20 lb. is a liſpound, 20 liſpound is a ſhippond, and 6 ſhippond is a laſt, which makes in London about 21 C. 3 quarters, 24 lb. avoirdupois. Their weights are reckoned heavier than thoſe of Revel about 9 *per cent.*

In *Peterſburgh*, *Moſcow*, and other parts of Ruſſia, their weights are zollotnicks, pounds, poods, and barquits: 96 zollotnicks make their pound, which is equal to 13 oz. 3 dwts. 6 grains troy weight; 40 pounds is one pood; 10 pood is a barquit; and a pood of 40 lb. Ruſſia weight will render in England 35½ or 36 lb. avoirdupois.

Portugal.

Their weights are but of one ſort, and they are divided as follows: 2 drams is one octavo, 8 octavos is one oz. 16 ounces is one arrata or pound; 32 pound is an arob, or rove; and 4 roves is a quintal, or 128 lb. They alſo divide the ounce into penny-weights and grains; being the ſame parts the ounce troy is divided into at London.

The above weights are between 3 and 4 *per cent* heavier than the London avoirdupois.

Spain.

Their weights for grocery, &c. are as follow: 2 ſemi-drams is one dram, 8 drams is one ounce, 8 ounces is one mark, 2 marks is one pound, 25 pounds is one arobe, and 4 arobes is one quintal; being between 3 and 4 *per cent.* heavier than London avoirdupois weight.

Their weight for gold and ſilver in duſt, or in bars, in the Indies are theſe: one tomine is worth 2 rials, and the tomine weighs 16 grains; a caſtillian is 16 tomines, 4 grains; 6 caſtillians and 2 tomines make one ounce mark weight; and the piaſtre ſhould weigh one ounce.

Their common weights for gold are reckoned 12 grains to a tomine, 8 tomines to one caſtillian, 6¼ caſtillians to one ounce, and 8 ounces to one mark.

Their ſilver weights are 75 grains to one dram, 8 drams is an ounce, and 8 ounces is a mark.

Caſtile. They reckon 28 grains to a dram, 16 drams to an ounce, 16 ounces to the pound, 25 lb. to a rove, and 4 roves to a kintal, which is about 103½ lb. in London.

Granada. Their common weight is the kintal of 4 roves of 25 lb. to a rove, and makes in London about 96 lb.

Valencia. Their weights are the rove, kintal, and cargo; 24 lb. being a rove, 4 roves a kintal, and 2½ kintals a cargo. The kintal of 96 pounds, of 18 ounces to the pound, makes in London about 108 lb. avoirdupois.

All pepper and valuable commodities are ſold by the kintal of 120 lb. which is accounted about 18 or 20 *per cent.* leſs than 112 lb. avoirdupois.

Biſcany. They have 2 ſorts of kintals; the one is 100 lb. and makes in London about 111 lb. avoirdupois; the other is for iron, and makes 128 lb. avoirdupois.

Catalonia. Their weight is a kintal of 100 lb. 3 of which is a cargo.

Wool is ſold by the rove of 30 lb. and 100 lb. of London makes about 92 lb. here.

France.

Paris. Two ſeconds is one prime, 2 primes is one grain, 24 grains is one penny weight, 3 penny weights is one dram, 8 drams is one ounce, 8 ounces is one mark, 2 marks is one pound, 100 lb. is one quintal, and 10 quintals is one millier; 112 lb. avoirdupois in London being a little more than 100½ lb. of Paris; and the weights of Paris are 1⅓ *per cent.* heavier than thoſe of Amſterdam; or 100 lb. of Amſterdam weighs 98⅔ lb. of Paris, and 100 lb. of Paris weighs 101⅓ lb. of Amſterdam.

The muid of *Orleans* ought to weigh 600 lb. and is compoſed of 12 mines, equal to 2½ ſextiers of Paris, or 5 buſhels of Bourdeaux.

The ſextier of *Arles* weighs only 93 lb. mark weight, and the load 360 lb. of that country.

The load of *Beaucaire* is 2 *per cent.* greater than that of Arles.

The load of St. *Giles*'s is 18 or 20 *per cent.* greater than that of Arles.

The load of *Tarſcon* is 2 *per cent.* leſs than that of Arles.

The ton of *Auray* in Britany is reckoned 2200 lb. of Audierne 2300 lb. of Breſt 2240 lb. and of port Lewis the ſame.

At Nantz it is compoſed of 10 ſextiers, and the ſextier of 10 buſhels; the meaſure being heaped, it weighs between 2200 lb. and 2250 lb.; but when it is ſtriked, it weighs 18 or 20 *per cent.* leſs.

Tholouſe. Brandy is ſold here by the quintal, or 100 lb. weight, with the caſk.

Bourdeaux. Their weights agree within a trifle with thoſe of Amſterdam; and 92 lb. of this place make about 100 lb. avoirdupois in London.

Rochelle and *Cogniac.* Their weight is the quintal of 100 lb. which makes in London about 109½ lb. avoirdupois.

Lyons. Their weights are of two ſorts; the city weight, which weighs 14 ounces of the pound de marc, for common uſe; and the other of 15 ounces for ſilk. 100 lb. ſilk weight makes 108 of their city weight, and 100 lb. of the city weight is about 94 lb. avoirdupois in London.

Roan. They have two ſorts of weight; pounds de vicompt, and pounds of mark. 108 lb. vicompt weight makes 100 lb. of mark weight, or 110 lb. of Paris weight. This laſt is only to be underſtood in the weighing of wool, or elſe 100 lb. mark weight weighs but 104 lb. vicompt weight; and they weigh with no leſs than the 52, 26, and 13 lb. of the vicompt weights, all leſſer quantities are weighed by the mark-weight: 100 lb. vicompt is about 113¾ lb. avoirdupois in London.

Toloun, and *Provence.* Their weight is the quintal of 100 lb. of 16 ounces, and 3 quintals is a cargo: 100 lb. avoirdupois of London makes 113 lb. of their weight.

Marſeilles. In their weights they reckon 16 ounces to the lb. and it has been found that 113 lb. Marſeilles weight makes in London 100 lb. avoirdupois.

Calais. They have three ſorts of weights.

The firſt is the town weight, 100 lb. of which makes about 92 lb. in London.

The

The ſecond is called the merchants weight, of which 100 lb. makes 113 lb. in London.
The third is called the Engliſh wool weight, and is about 3 *per cent.* lighter than the town weight.

Of the French weights in general.

The pound of mark is well known to the goldſmiths in France, it being uſed in weighing gold, ſilver, and other fine goods. The pound of table is uſed in weighing of groſs goods, and is found to differ in ſeveral parts in France from the mark weight, 18, 20, or 25 *per cent.* or it is ſo much lighter than a pound of mark, eſpecially in Provence, and in upper or lower Languedoc; for 16 ounces of the pound de table, makes but 14 ounces of the pounds of mark: and the Marſeilles weight is lighter than thoſe of Rochelle, between 23 and 25 *per cent.*
What they call a quintal in France muſt be underſtood the hundred weight of 104 lb. the half 52, the quarter 26, and the half quarter 13 lb. In ſome places a difference is made between 100 lb. weight and a quintal; therefore the buyer and ſeller muſt explain themſelves upon this head in making of bargains. At Roan they have another ſort of weight, called the pounds de vicompt, or vicount; and 100 lb. of this vicount is reckoned to make about 108 lb. or 110 lb. mark, or Paris weight, eſpecially in weighing of wool; but in weighing other things this 100 lb. is reckoned 104 lb. mark weight; they have no leſs weight of the vicompt weight than 13 lb. ſo that all goods, weighing under that weight, are weighed by the mark weight. They have another ſort of weight uſed in France, called the Roman or ſtatera weight; uſed moſtly in Languedoc, which is much the ſame for weight as the table weight.

Italy.

Milan. Their weight is a quintal of 100 lb. of 12 ounces to the lb. and 100 lb. avoirdupois in London has been found to weigh 137 lb. of their weight.

Genoa. 12 ounces is a pound, 18 ounces a rottello, 25 lb. a rove, and 6 roves a quintal.
100 lb. of Genoa makes in Holland $66\frac{2}{3}$ lb. in Lyons $77\frac{1}{4}$ lb. in London 73 lb. in Hamburgh 68 lb. in Frankfort $64\frac{1}{2}$ lb. in Leipſick 70 lb. in Leghorn $96\frac{3}{4}$ lb. and in Venice $110\frac{3}{4}$ lb.
The Genoa weights for gold are reckoned thus: 24 grains to a denier, 24 deniers to an ounce, 8 ounces to a mark, of which 130 make about 100 lb. troy weight.
And 100 lb. troy weight is equal to $86\frac{1}{2}$ lb. of their weight for ſilver, wherein they reckon 12 ounces to the pound.

Venice. Their weights are diſtinguiſhed in groſs and ſuttle weights.
Their groſs quintal, by which they weigh braſs, metal, feathers, and other lumbering commodities, is 100 lb. groſs.
The other, by which they weigh ſilk, ſpices, and drugs, is 100 lb. ſuttle.
Now 100 lb. groſs weight makes 158 lb. ſuttle weight, or 106 lb. in London avoirdupois.
And 100 lb. ſuttle weight makes about $63\frac{2}{7}$ lb. of their groſs weight, or about $65\frac{3}{4}$ lb. in London.
And 100 lb. ſuttle of Venice has been found to make about $61\frac{3}{4}$ lb. in Hamburgh, $65\frac{3}{4}$ lb. in London, 60 lb. in Amſterdam, and 59 lb. in Frankfort.
Their gold and ſilver weights are as follow; 4 grains is one caract, 9 carats, or ſaliques, is one quarta, 4 quartas one ounce, and 8 ounces is one mark. 100 lb. troy weight has been found to make about $116\frac{1}{2}$ lb. of the above marks; and the ſame in Verona.

Bologna. Their weights are 12 ounces to a pound, and 100 lb. to the quintal, which makes in London about 80 lb. after which rate an ordinary bale of Bologna ſilk, which weighs of their weight 270 lb. makes in London about 216 lb. avoirdupois.

Florence. Their weight is the quintal, or 100 lb. of 12 ounces, which makes in London about 72 lb. avoirdupois.
The following weights are for gold and ſilver; 24 grains is one denier, 3 deniers is one groſs, 8 groſſes one ounce, 8 ounces is one mark, and $158\frac{1}{2}$ marks is about 100 lb. troy weight.
Wrought ſilks are ſold by weight, and not by meaſure: ſalt is ſold by the ſtaro of 72 lb.
Corn or grain is ſold by the moggio, of 24 ſtaros of 50 lb. each.

Leghorn. Their weights are the ſame as they have at Florence; but they have 4 ſorts of quintals.
A quintal for common uſe is 100 lb. for allom 150 lb. for ſugar 151 lb. for fiſh 160 lb. and the quintal for wool is the ſame.
And 100 lb. of Leghorn has been found to make $75\frac{1}{2}$ lb. in London, $85\frac{1}{4}$ lb. in Marſeilles, 69 lb. in Amſterdam, $70\frac{1}{2}$ lb. in Hamburgh, and $72\frac{1}{2}$ lb. in Leipſick.

Ferrara. Their weight is the quintal of 100 lb. which makes in London about 75 lb.

Ancona. Their weight is a quintal of 100 lb. and makes in London about 73 lb.

Mantua. Their weight is a quintal of 100 lb. which makes about 72 lb. in London.

Modena. Their quintal is 100 lb. and makes in London about 72 lb.

Naples. Their weight is the pound of 12 ounces, and makes about $10\frac{1}{3}$ ounces avoirdupois; ſo that 100 lb. of their weight is about 64 lb. 10 oz. in London.
In their weights for gold and ſilver, they reckon 8 octaves to an ounce, and 12 ounces to a lb. $86\frac{1}{2}$ lb. of which make about 100 lb. troy in London.

Sicily. 12 ounces is a lb. $2\frac{1}{2}$ lb. a rotello, and 100 rotellos the common canter, which is about 176 lb. avoirdupois in London.

Turky.

Four grains is one quirat, 16 quirats is a dram, 12 drams is an ounce, 12 ounces is a rota, 150 rotas is a canter, 400 drams is one oak, 176 drams is one loderas, and 100 loderas is 44 oaks, which is called a quintal or cantar, and makes about 120 lb. in London.
Their weights for coins is a medical, or dram, of 24 killets; and 20 medicas of gold is 3 ounces troy weight.
Silk is ſold by the batman, containing 6 oaks; if the batman be weighed by the lodera, it will weigh 13 lodera and 112 drams.

Aleppo. The weights of this place are the rotulos and the drams; but their rotulo differs in drams according to the commodities.
The common rotulo is 4 lb. 13 ounces, or 720 drams.
The rotulo for Perſian and Legee ſilks is 680 drams, or $72\frac{3}{4}$ ounces.
The ſame for Belladine ſilk is 720 drams, or $74\frac{1}{4}$ ounces; and for Tripoli ſilk the rota is the ſame.
The ſame for Caſtravan ſilk is 600 drams, or 4 lb. Engliſh.
The Aleppo wells is 120 drams, or 13 Engliſh ounces.
The cotton Cyprus kental of 100 rotulo's is 506 lb. Engliſh.
The oak contains 400 drams.
A weſno of ſilver is 100 drams; and there is another weſno of 3600 drams. They reckon 60 drams to an ounce, and 10 ounces to a rotello, which is about 4 lb. 14 oz. avoirdupois weight; ſo that 112 lb. is 22 rotellos and 8 ounces, and 100 rotellos is a cantar or kental, and makes 418 lb. avoirdupois.
Gold, ſilver, and precious ſtones, are ſold by the mitigal, which is $1\frac{1}{2}$ dram; a dram is 60 caracts, and a caract is 4 grains.

Smyrna. At this place a rotello is 180 drams, and 100 rotellos is a kintal of 45 oaks, or 119 lb. avoirdupois in London; 44 oaks is counted a kintal; 2400 drams, or 6 oaks, is a batman; 400 drams is an oak, which is 2 lb. 11 oz. avoirdupois in London; 800 drams is a chique; 250 drams is an oak of opium; 120 drams is an oak of ſaffron; and 140 drams is one pound avoirdupois.
Cotton yarn of all ſorts, gauls, allom, &c. are weighed by the kintal of 45 oaks.
Cotton wool, ſheeps wool, tin, &c. are weighed by the kintal of 44 oaks.
Several ſorts of ſilk are ſold by the batman.
Pepper, cloves, mace, benjamin, and galbanum, &c. are ſold by the oak; and goats hair, beaten and unbeaten, are ſold by the chique.
In the *Morea.* In their weights they reckon $11\frac{2}{9}$ drams to an ounce, 12 ounces to the lb. 3 lb. to an oak, 132 lb. to a quintal, which is about $117\frac{1}{2}$ lb. in London; but in weighing of raw ſilk they reckon 15 ounces to the pound.

Candia. They have two ſorts of weights, the ſuttle weight, and the groſs or great weight; the 100 lb. groſs weight makes about 118 lb. avoirdupois in London, and the 100 lb. ſuttle weight makes about 76 lb. of London.

Arabia.

Ten drams is one ounce, 24 ounces is one rottello, and 24 rotellos is one fracelbo, or 24 pound 12 ounces Engliſh.

	lb.	oz.	dr.
Mocha. One ratt'e is - -	1	10	12
2⅔ rattles, or 10 vachin, is 1 maund -	2	15	6
10 maunds one frazil, or - -	20	10	12
15 frazil, one behee, or 445 lb.			
Mocha Buttleſucke. 14½ Vachia is one rattle, or	1	0	4
29 vachios, or 2 kettles, or 1 maund	2	0	8
10 maund one frazil, or - -	20	5	3
40 frazils is one bahar, or - -	813	1	0

Perſia.

The maund or maundſhaw for ſilk is 13 lb. avoirdupois weight; 2½ maundſhaw is one maundſarrat, uſed in weighing groſs goods; and 36 maundſhaws make a load or cargo. For weighing gold they uſe a mittigal; 6½ of which make a Venetian ounce. For diamonds, pearls, &c. they uſe the rattee, which contains 20 val; 23 of which are equal to an Engliſh caract.

India.

Agra. Their weights for gold, ſilver, muſks, civets, &c. are called the troll, which is 12 maſſes; and the maſs contains 40 lb. For other commodities their common weight is the ſeer, which varies in ſeveral parts of Indoſtan: in Agra it is of two kinds, the one 26 pices, which is 26⅔ ounces; and the other is 30 pices, which is 22 lb. avoirdupois.

They have alſo hundred weights called maunds, 14 ſeers to a maund, being 33 lb. Engliſh; the man weighs 69 lb. avoirdupois; only the man they weigh their indicoes with is but 53 lb.

Goa. Their weight for ſpices is the bahar; it weighs 3½ quintals Portugal weight. Their other weights for ſugar, honey, &c. is the maund of 14 lb. Portugal weight.

Cormandel. 20 maunds is a candy, or 500 lb. Engliſh; and a maund is 40 ſeers of 22 maces, or 25 lb. Engliſh.

Bombay. Fifteen pice is one ſeer, 40 ſeers is one maund, or 28 lb. 20 maunds is one candy, and a pucca maund is 74⅔ lb.

Surat. Forty ſeer is one maund, or 37⅓ lb. and 20 maund is one candy, or 6⅔ C.

Anjengo. Eighty pullums is one telong, or 16 lb. and 35 telongs is one candy, or 560 lb.

Callicut and *Tellichery.* Twenty maunds of 29¾ lb. is one candy.

Carwar. Twenty-five pice is one ſeer, 40 ſeers is one maund, or 25¾ lb. and 20 maunds is one candy, or 515 pound.

Fort St. George. Twenty-five pound is one maund, and 20 maunds is one candy, or 500 lb.

Bengal. Twenty pice is one ſeer, 40 ſeers is one maund of 75 lb. 20 maunds of 25 lb. each one candy, 80 couries one pun, and 16 pun is one cahaun.

Bantam. A cattee is about 21$\frac{3}{25}$ ounces avoirdupois, and 100 catees is a pical, or 132 lb. Engliſh; 3 pical being a bahar, or 369 lb. Engliſh.

Siam. Their weight is the bahar, which is of 2 ſorts; the great one contains 200 cattees of 26 taels each; and the leſſer bahar 200 cattees of 22 taels; a tael being about 1⅝ lb. Liſbon weight.

Bencoolen. A bahar is 560 lb.

Sumatra. Two hundred cattees is a bahar.

China.

Ten canderine is one mace, 10 mace 1 tael, 16 tael 1 catty, and 100 catty 1 pecul of 132 lb.

They weigh all monies by dodgins, like ſtillards, and they take none but good ſilver: an Engliſh crown goes for 8 mace, and 3 rupees for one tael.

A rupee weighs 3 mace, 1 canderine, and 2 caſh; but generally 3 mace 2 canderine; ſo that if Europeans cut them they will loſe by them.

Japan.

Their weights are 20 mace to a tael, 16 tael to a cattee, and 100 cattees to a ſiakin; a cattee being about 21 oz. avoirdupois.

Africa.

The weights in uſe in Cairo, Alexandria, and generally throughout all Egypt for trade, are found to be of four ſorts.

1. The quinta of zara, which makes in London 212 lb. avoirdupois.
2. The quinta forfori, which makes 93 lb.
3. The quinta zaidin 134 lb.
4. The quinta mina 167 lb.

The three firſt quintas are reckoned by rotellos: the mina quinta in Alexandria is reckoned at 20 ounces; but in Cairo at 16 ounces.

Tunis. Their common weight is a cantar, or 100 lb. and makes in London about 114 lb. avoirdupois: they reckon 8 tomins to an ounce, and 16 ounces to a pound.

Algier. Their weight is a quinta, containing 100 rott or pound, which makes 120 lb. avoirdupois in London; or 112 lb. makes about 94 rottellos.

Their quintar is of divers ſorts: for iron, lead, yarn, and wool it is 150 rott. For raiſins, butter, figs, honey, dates, oil, and ſoap, 166 rott. For almonds, cheeſe, cottons, 110 rott. For flax, 100 rott.

Oran. They have 4 quintals in their weights. A quintal of 5 roves, of 20 lb. to a rove. 100 lb. ditto for ſpices, of 4 roves, of 25 lb. to a rove; 100 lb. ditto for corn, of 6 rottellos or pound. Ditto for cotton wool, containing 15 rottellos.

A hundred pound in London makes in the firſt 90 rottellos, in the ſecond 133 rottellos, in the third for corn 48 rottellos, and in the laſt 58⅓ rottelos.

Una. In their weights they differ; having three ſorts of quintals. One is compoſed of the pound or rottello, one for wool, another for ſpices, and a third for corn; 100 lb. avoirdupois making 63 rottellos wool weight, 72 rottellos for ſpices, and 92 rottellos in their corn weight.

Sallee. Their weights and meaſures are moſtly the ſame as thoſe of Spain.

Fez and *Morocco.* In Fez their quintal is 100 rottellos, 64 of which make about 100 lb. avoirdupois.

In Morocco, their quintal is the ſame as in Spain.

Guinea. When the Europeans deal with the negroes, they commonly make uſe of their own weights and meaſures; unleſs it is for gold, when the Europeans make uſe of a weight called an akey, being the 24th part of an ounce. However ſome authors ſay, that the negroes have peculiar weights to themſelves, which paſs under the following denominations:

A benda, which is their largeſt weight, and weighs about 2 ounces.

A benda offa, is half a benda, and weighs one ounce.

An egebba is half an ounce.

A piſo, or euſanno, is 1-4th of ditto.

A ſeron is 1½ piſo.

A quinta is ¾ piſo.

An agiraque is ½ piſo.

A media taba is ¼ piſo.

And it is ſaid by thoſe who have made trial of the above weights, that one pound by their weight is 3 8ths of an ounce heavier than the pound troy of London.

American WEIGHTS. Little can be ſaid as to the weights of America; the ſeveral European colonies there making uſe of thoſe of the ſtates and kingdoms to which they belong. For as to the aroue of Peru, which weighs 27 pounds, it is evidently no other than the Spaniſh arroba, with a little difference in the name.

Groſs-WEIGHT. See *Groſs*.

Neat-WEIGHT. See *Neat*.

Penny-WEIGHT. See *Penny*.

Aſſay of WEIGHT. See *Aſſay*.

Auncel WEIGHTS. See *Auncel* weights.

WELD, or *Wold.* A plant uſed by dyers to give a yellow colour; which is ſowed in a light ground, in the months of March, and is ripe in June or July. In hot countries it is frequently dry enough when gathered; but, when in the colder, care muſt be taken to dry it. Great circumſpection is to be uſed that it be not gathered before thorough ripe; as alſo to prevent its getting wet when gathered.

Weld is much cultivated in Kent, for the uſe of the London dyers. With the help of pot-aſhes it yields a deep lemon colour; but, either by the ſmallneſs of the

proportion put into the liquor, or by taking from it a ſlighter tincture, it ſerves to dye all colours between white and a deep yellow. Its dye will hold well, except againſt urine and tartarous liquors.

WENER. A lake of Sweden, in the province of Gothland, 70 miles in length, and 50 in breadth.

WERST, or *Wert*. A meaſure for diſtances, uſed in Ruſſia, which, according to the calculation of captain Perry, in his hiſtory of Muſcovy, publiſhed in 1717, contains 3504 Engliſh feet, and makes about two-thirds of an Engliſh mile.

WEST, in coſmography. One of the cardinal points of the horizon, diametrically oppoſite to the eaſt; being ſtrictly defined the interſection of the prime vertical with the horizon, on that ſide where the ſun ſets.

West, in aſtronomy, is chiefly uſed for the place in, or towards which the ſun and ſtars ſink under the horizon. Thus, we ſay, the ſun, Mars, and the like, are in the weſt.

West, and *Weſtern*, in geography, are applied to certain countries, ſituated towards the point of ſun-ſetting with reſpect to certain others; thus the empire of Rome anciently, and of Germany at preſent, is called the empire of the Weſt, or the Weſtern empire, in oppoſition to that of Conſtantinople, which is called the empire of the Eaſt; and the Latin, or Roman church, is called the Weſtern-church, in oppoſition to the Greek church.

The French, Spaniards, Italians, and others, are called weſtern nations, in reſpect to the Aſiatics; and America, the Weſt Indies, in reſpect of the Eaſt Indies.

West-*India*, or the *Weſt Indies*. See *India*.

Weſt India Companies.

The Dutch West *India company*, was eſtabliſhed in 1621, with an excluſive privilege of exerciſing ſolely, during 24 years, all the commerce of the coaſt of Africa, from the tropic of Cancer to the cape of Good Hope; and for America, from the ſouthern point of Newfoundland, thro' the ſtreights of Magellan, that of Maire, or others, to that of Anian, as well in the North as the South ſea.

The directors of this company were divided into five chambers; 20 for that of Amſterdam, 12 for that of Zealand, 14 for each chamber of the Meuſe, and the north quarter, and 14 likewiſe for that of Friezland.

The general direction was put into the hands of 19 directors, choſen from out of each chamber, in proportion to what the chambers contributed towards the general capital; eight for Amſterdam, that furniſhed four ninths; four for Zealand, that put in two ninths; and two from each of the three others, who alſo contributed each a ninth. The nineteenth director was choſen by the States General, who even had a right to nominate ſeveral as they judged proper.

On the 4th June 1647, this company received its privilege for 25 years; but it could ſcarce complete the time of this laſt conceſſion, by means of the immenſe loſſes and extraordinary expences which ſeveral enterprizes had occaſioned.

The feeble diſpoſition of this company, cauſed its diſſolution upon the expiration of its privilege; and, on the 20th of September, a new company, compoſed of the ancient members and their creditors, obtained letters-patent from the ſtates, and entered upon the ſame rights and eſtabliſhments of the firſt, which it enjoyed with ſome happineſs, ſupporting itſelf always with honour.

Its firſt fund was about 525,000 l. ſterling, and its principal eſtabliſhments were, one at Cape Verd, and the other upon the Gold coaſt in Guinea, for the African coaſt; the reſt for America, being at Tobago, Curaſſao, and the new Low Countries, ſituated between Virginia and New England, afterwards called New York, and given to the Engliſh in exchange for Surinam.

In 1720 the company obtained permiſſion from the States-General, to make new ſubſcriptions, upon the footing of 250 *per cent.* but theſe ſubſcriptions proved unſucceſsful, and fell into diſcredit.

It may be proper to add here the ſtate of all the dividends which this company made from the time of its new eſtabliſhment, till 1721.

In	1679	2 *per cent.* in money.
	1682	8
	1684	6
	1687	10 *per cent.* in bonds.
	1691	5
	1692	8 *per cent.* in money.
	1693	5 *per cent.* in bonds.
	1695	4
	1697	5
	1699	5
	1700	5
	1702	4
	1704	5 *per cent.* in money.
	1705	4
	1708	5
	1710	4
	1712	5
	1714	4
	1716	6
	1717	4
	1721	4

Total of the dividends 108 *per cent.*

Dutch Surinam company. The Zealanders took from the Engliſh the colony of Surinam, during the wars of the ſeventeenth century between England and Holland. The ſtates of Zealand ceded in 1682 what belonged to them of this conqueſt, to the Dutch Weſt India company, which, the 23d of December of the ſame year, obtained letters patent from the ſtates for this acquiſition: the colony being ever ſince divided into three parts, whereof one belongs to Amſterdam, another to the Weſt India company, and the third to the family of Somelſdiik.

This company makes a part of the Weſt India company: and the privilege granted it by the States General of the United Provinces, is of the 23d of September 1682.

By this privilege, compoſed of 32 articles, the duties due to the company, the immunities of the planters, the number of military and municipal magiſtrates, the ſovereign council, the criminal and civil juriſdictions, and the police of the old and new inhabitants are regulated.

The duties reſerved to the Weſt India company are the duties of laſtage for ſhips going to, or coming from Surinam, at 3 livres *per* laſt; the duty of weight for merchandiſes upon the footing of two and a half *per cent.* at arriving and departing, and the capitation payable in ſugar, both for Blacks and Whites, at 50 lb. of ſugar *per annum*: beſides theſe three duties, the company enjoys alſo the excluſive privilege of the Negro trade; by which they are obliged to ſupply the colony yearly with ſuch a complement of ſlaves as it ſhall have an occaſion for; which ſlaves are to be ſold publickly, and preſented two by two to the purchaſers, without any preference of the rich before the poor: the payment whereof is to be made in three terms, from ſix months to ſix months, purſuant to the clauſes and conditions agreed upon between the company's commiſſioners and the inhabitants.

The immunities of the planters conſiſt, firſt, in eſtabliſhing themſelves freely in the colony with their family, cattle, and merchandiſe; provided that they are ſubjects of the States-General; and in freely departing therefrom when they think proper, to return to Holland, or eſtabliſh themſelves in any other place.

2. In not being liable to any other duty but thoſe before ſpecified; the caſe of extreme neceſſity excepted, either for the good of the ſtate in general, or that of the colony in particular.

3. In not paying for their expences and paſſage from Europe to America, above the ſum of 30 florins for each perſon above the age of twelve years, including their board; and 15 florins only for thoſe not arrived at that age.

4. That they ſhall be at liberty to ſet their effects aboard whatever ſhips they pleaſe, without any compulſion of uſing others than their own, and thoſe they have freighted.

5. That the companies ſhips employed in the Negro trade, ſhall load no merchandiſes for their return, to the prejudice of other ſhips; but ſhall only have their freight conſiſting of their own effects, or accruing from the negroe trade, or peculiar duties and impoſts.

6. That the merchants being arrived there with their ſhips and merchandiſe, may reſort to the moſt commodious places for their commerce; provided that they incommode not the inhabitants thereby, nor prejudice the rights of the company.

7. And laſtly, that the governor and council ſhall be upon their oath, to maintain all the planters and merchants in all the ſaid privileges.

As to the government, it is veſted in the hands of the council of ſtate, compoſed of a governor and ten council; which council, according as the colony is fortified, may be augmented to the number of forty; the governor to be elected by the company, but with the approbation of their High Mightineſſes; and the council by a plurality of votes among the inhabitants.

Tho' the governor ſhould have the chief authority in political and military affairs; yet they are to be decided in the council by a plurality of voices, and conformable to the orders of the company.

Neither the governor nor his council are to charge the colony with any other impoſts and duties but thoſe above mentioned, without the company's approbation. Yet, purſuant to the ſame obſervation, they may exact ſome moderate ſums for the maintenance of miniſters, the ſervice of the church, ſchool-maſters, &c.

Laſtly, as it may happen that the colony may become chargeable to the Weſt India company, the directors of the ſaid company are authoriſed, at all times, to make it ceaſe; in which caſe the ſtate ſhall interfere, and give neceſſary orders. See Dutch Weſt Indies, under *United* Provinces.

The French WEST-*India company*, was eſtabliſhed in 1664, their charter giving them the property and ſeignory of Canada, Acadia, the Antilles iſlands, Iſle of Cayenne, and the Terra Firma of America from the river of the Amazons to that of Oronoko; with an excluſive privilege for the commerce of thoſe places, as alſo of Senegal and the coaſts of Guinea, for 40 years, paying only half the duties.

The ſtock of the company was ſo conſiderable, that in leſs than ſix months, 45 veſſels were equipped; wherewith they took poſſeſſion of all the places in their grant, and ſettled a commerce which ſubſiſted only nine years. In 1674, the grant was revoked, and the ſaid countries united with the royal dominions; his Majeſty reimburſing the actions of the adventurers.

This revocation was not only owing partly to the poverty of the company, occaſioned by its loſſes in the wars with England, which had neceſſitated it to borrow above a million, and even to alienate its excluſive privilege for the coaſts of Guinea; but alſo to its having in good meaſure anſwered its end; which was to recover the commerce of the Weſt Indies from the Dutch, who had taken it from them; for the French merchants, being now accuſtomed to traffic to the Antilles, by permiſſion of the company, were ſo attached to it, that it was not doubted they would ſupport the commerce after the diſſolution of the company.

The French company of Miſſiſſippi, or company of the Weſt, was formed in 1669 by Monſieur de la Sale, and eſtabliſhed in 1712: but was afterwards united to the India company.

French St. Domingo company, was the laſt of all thoſe eſtabliſhed in France, during the reign of Lewis XIV. which received its letters-patent in the month of September 1698.

The time of its conceſſion was for 50 years; its extent being, that part of the iſland ſituated from, and comprehending therein Cape Tiberon to the river of Naybe incluſively, 3 leagues up the country, beginning from the ſea ſhore.

The privileges granted the company conſiſt in the excluſive right of all the eſtabliſhments and commerce throughout the extent of its conceſſion; beſides a permiſſion to trade, and even to eſtabliſh themſelves in all the iſlands, countries, and lands of the weſtern coaſts of America, not poſſeſſed by other European powers.

Scarce any French company commenced more happily, and continued with greater hopes of ſucceſs: but the genera good of the iſland of St. Domingo requiring a liberty of commerce, the company, as appears by the letters-patent ordaining the revocation thereof, were the firſt to wiſh for, and require this liberty of trade, wherein they found their advantage.

Some time after the revoking and diſſolution of the company of St. Domingo, a ſociety was formed, which made an offer to the king of ſix millions, to be eſtabliſhed in the rights of this company, upon the conditions ſpecified in a long memoir, preſented by this ſociety to the council of Marine; but the royal India company, having requeſted the king for the preference, offering to execute all the clauſes and conditions propoſed by the ſaid ſociety, his Majeſty, by an arret of his council of ſtate, of the 10th of September 1720, granted its requeſt; and in conſequence eſtabliſhed it in all the privileges of the St. Domingo company, as well in France as America.

WESTERN *Iſles*. See *Azores*, and *Hebrides*.

WESTERN *Ocean*. See *Ocean*.

WESTERWICK. A port of Sweden, in the province of Smaland, lying in 16 deg. of E. lon. and 58 deg. of N. lat. on the Baltic ſea, 100 miles S. of Stockholm.

WESTMINSTER *Fire-office*. See *Inſurance*.

WESTPHALIA *Ham*. See *Ham*.

WET-*dock*. See *Dock*.

WETER. A lake in the province of Gothland in Sweden, 90 miles long.

WET-*glover*. A dreſſer of the ſkins of ſheep, lambs, and goats, which are ſlender, thin, and gentle.

WEY. See *Weigh*.

WEYGATS *Streights*. See *Waigatz*.

WEYMOUTH. A port-town of Dorſetſhire, lying in 7 min. of W. lon. and 54 deg. 30 min. of N. lat. on a fine bay of the Engliſh channel, 7 miles S. of Dorcheſter.

WHALE. The largeſt of all fiſh which are found in different parts of the world; having no teeth, but only beards, or whiſkers, on the throat, about 9 inches broad, and 15 feet long, which end in fringes like hog briſtles, are ſet in the palate, and ranged in order, according to the different magnitudes, extending or contracting the cheeks of the creature. The female always keeps its young under its fins, and never leaves it till it is weaned; ſhe has no udder, but nipples and teats, which contain ſo great a quantity of milk, that there has been drawn from them two hogſheads at one time. Different ſeas have different ſorts of whales; thoſe of Japan having two great holes over their muzzles, thro' which they take in, and ſquirt out a great quantity of water, and theſe are generally larger ſized than the others: ſome have teeth and no beards; and thoſe of Greenland have black heads and white-bellies. See Whale-*Fiſhery*.

WHALE-*bone*. A commodity procured from the whale, uſed as ſtiffening in ſtays, fans, buſks, ſcreens, and hoops. By the ſtatute of the 9th and 10th of Will. III. whalebone cut, except in fins, may not be imported, upon forfeiture, and double the value. Maſters of ſhips knowing thereof, forfeit 50 l.

And, by the ſtatute of the 5th of Q. Anne, the perſons in whoſe cuſtody found, forfeit 30 l. beſides the goods, and double the value.

The hundred weight of whalebone is ſold at Amſterdam for 182 florins; the deductions for good weight and prompt payment being each one *per cent*.

WHALE-*fins*. See *Fin*.

WHALE-*fiſhery*. See *Fiſhery*.

WHALE-*oil*. See *Oil*.

WHARF. A ſpace on the banks of a haven, creek, or hithe, provided for the convenient loading and unloading of veſſels upon. See *Haven*, and *Hithe*.

The fee paid for the landing of goods on a wharf, or for ſhipping them off, is called wharfage: and the perſon who has the overſight, or direction of the wharf, and receives wharfage, is called the wharfinger.

In regard that when ſhips came up to the port of London, there uſed to be very great frauds committed, by a promiſcuous kind of ſhipping and landing of goods and merchandiſe,

chandiſes, at ſeveral blind or unknown wharfs and keys, by reaſon of which the king was often defeated of his cuſtoms; therefore, the ſtatute of the 13th and 14th of Char. II. ordained, that a commiſſion ſhould iſſue out of the exchequer to aſcertain all ſuch keys, wharfs, or other places, as his Majeſty ſhould appoint and allow of, for prevention thereof.

In purſuance of which, the keys, wharfs, and places hereafter named, were aſſigned, appointed, and allowed, to be lawful keys and wharfs, for the ſhipping, lading, or landing of goods.

Brewer's key.
Cheſter's key.
Galley key.
Wool dock.
Cuſtom-houſe key.

Cuſtom-houſe key, which is much the largeſt of any, hath ſome ſtairs on the weſt ſide thereof declared not to be a place for ſhipping or landing of goods, but for boats only.

Porter's key.
Bear key.
Sab's key.
Wiggon's key.
Young's key.
Ralph's key.
Dice key.

The ſtairs of Sab's dock, and Dice key, are excluded from being places of ſhipping, or landing of goods and merchandiſe.

Smart's key.
Somer's key.
Lyon key.
Buttolph wharf.
Hammond's key.
Gaunt's key.

The ſtairs belonging to Somer's key, and on the eaſt-ſide of Gaunt's key, are declared to be no lawful places for landing or ſhipping of goods.

Cock's key.
Freſh wharf.

One place betwixt this key and wharf, is alſo declared unlawful for ſhipping goods.

Billingſgate,

To be a common open place, for the landing or bringing in of fiſh, ſalt, victuals, or fuel of all ſorts; and all native materials for buildings, and for fruit, grocery excepted, and for carrying out the ſame.

Bridge-houſe in Southwark,

Is allowed a place convenient for landing of any kind of corn, bought or provided for victualling the city of London, and not upon any private account, or other wares or merchandiſe.

It is declared lawful for any perſon to ſhip or lade into any ſhip or veſſel on the river Thames bound over ſeas, and lying between London and Woolwich, any horſes, coals, beer, ordinary ſtones for building, fiſh taken by his Majeſty's ſubjects, corn or grain; the owners of ſuch goods firſt paying the duties thereon charged, and having warrants duly paſſed for the ſame, &c. Alſo any perſons may unſhip and lay on land, deal-boards, balks, and all ſorts of maſts, and great timber, at any place between Lime-houſe dock and Weſtminſter; provided the owners thereof firſt pay or compound for the cuſtoms and other duties, and declare the place at which they will land them before they unſhip any of the goods, and unlade them in the preſence of an officer of the cuſtoms, having a licence ſo to do; otherwiſe the ſaid goods to be forfeited.

If at any time it ſhall ſeem reaſonable to the principal officers of the cuſtoms, and conſiſtent with his Majeſty's ſervice, to give permiſſion for the ſhipping, lading, or landing of any goods or merchandiſe, at any other places, than is before mentioned and aſſigned to be lawful keys and wharfs; it ſhall be lawful for them to do it, and ſuch permiſſion ſhall be good and warrantable, without any forfeiture or advantage to be taken againſt the goods ſo landed.

The ſeveral keys and wharfs deſcribed and allowed to be free places for ſhipping and landing of goods and merchandiſes as aforeſaid, according to the act of parliament, are and ought to be left open at the diſtance of forty feet from the water ſide; and ſhall not be ſeparated or divided, one from another by any houſe, wall, pales, rails, or other impediment whatſoever, but only by mere ſtones or marks in the pavement, for the diſtinction of property, and not otherwiſe: and all the paſſages, lanes, or cartways leading to the ſaid keys or wharfs, from Thames-ſtreet, ſhall be of the breadth of eleven feet at the leaſt; and if of larger breadth or dimenſion heretofore, ſo they ſhall continue.

Where cranes are ſet up on the ſaid wharfs, by the owners or poſſeſſors of the ground, they ſhall not exceed the following dimenſions; a ſingle crane with one wheel, to be twelve feet in breadth, and a double crane with two wheels twenty feet, and each of them in depth or length from the wall or campſhot 21 feet at moſt: and the ſaid cranes, as well ſingle as double, ſhall be kept open and free, for common paſſage, from the ground to the floor under the wheels, without any other incloſure, partition, ſeparation or hinderance by poſts or ſpurns, than the neceſſary poſts and timber which ſupport the ſame at both ends; and the open height of the ſaid cranes, is to be at leaſt ten feet and a half from the ground to the ſaid floors under the wheels, that carts and carriages may freely paſs under them.

And it ſhall not be lawful for any perſon to build any jets, penthouſes, warehouſes, rooms, lodgings, or any manner of poſts, ſheds, or buildings, contiguous to the ſaid cranes, or on any part of the open wharf of forty feet in breadth, more than what is convenient about the cranes for the wheels to work upon, and ſufficient covering thereunto, not exceeding the height, breadth, and length aforeſaid: and as a further ornament, theſe cranes are to be laid in oil and coloured blue; and in the front thereof towards the Thames, ſhall be placed the king's arms, painted and ſet in a frame, with a decent moulding about it, of four feet and a half diameter.

If any wharfinger or owner of any of the wharfs or grounds allowed for ſhipping, lading, or landing of goods, do not conform to the rules and methods hereby preſcribed and directed for their wharfs, cranes, or buildings, or ſhall diſcontinue or alter the ſame, or make new incroachments thereupon; after public notice given by any three or more of the principal officers of his Majeſty's cuſtoms, by fixing up a writing under their hands, upon the wharf where the fault ſhall be committed, declaring the offence, and limiting a day and time for the amendment thereof; in ſuch caſe, if it be not amended or performed accordingly, then ſuch wharf and crane ſhall from thenceforward be no more reputed or taken, or have the benefit or privilege as a lawful place of ſhipping, lading, or landing of goods or merchandiſe; but be utterly debarred thereof, unleſs reſtored by his Majeſty's ſpecial warrant; and nevertheleſs the ſaid buildings and incroachments to be demoliſhed and removed.

The wharfingers or poſſeſſors of any of the keys or wharfs, or their ſervants, ſhall not ſuffer to ſtand or remain upon their wharfs, or paſſages leading to them, any more cars or carts than ſuch as ſhall be immediately called to lade or take up goods, wares, or merchandiſe there. And no further or other paſſage may be made or enlarged to the wharfs, or any part of the river Thames, within the limits aforeſaid, other than the ancient and common paſſages to the ſame.

Wharfingers commonly keep boats or lighters of their own, for the carrying out and bringing in of goods; in which, if a loſs or detriment happens, they may be made liable: and they have ſeveral managers over them; alſo a committee to redreſs grievances relating to merchants, &c. The wharfage money paid for landing of wines at a wharf, and for ſhipping or taking in goods into a boat or barge, are in general computed at the rate of 12 d. *per* ton, except for ſugars, &c. from the Weſt Indies, which

pay

pay 2 s. the ton, four hogſheads being reckoned a ton. Cranage is included in the 12 d. *per* ton wharfage; and the lighterage is half as much as the wharfage.

Wharfage of all goods not exceeding 5 s. is to be paid down on the wharf, and the wharfinger may detain the goods till payment. But wharfingers, or keepers of keys, &c. are not to ſuffer uncuſtomed or prohibited goods to be water-born or taken on land, without an officer of the cuſtoms being preſent, under the penalty of 100 l. Statute 14th Ch. II.

WHEAT. See *Corn*.

WHEELWRIGHT. An artificer, who makes wheels for all kinds of carriages.

WHEELWRIGHTS *company of London*, was incorporated by letters-patent of the 22d of Ch. II. dated the 3d of February 1670, by the name of The maſter, wardens, aſſiſtants, and commonalty, of the art and myſtery of wheelwrights of the city of London; who conſiſt of a maſter, two wardens, and 22 aſſiſtants; but have neither livery nor hall.

WHERRY. See *Veſſel*, and *Boat*.

WHETSTONE. A ſort of ſtone of a lax compoſition, and coarſe grain; ſerving for whetting or ſharpening knives, and other tools upon. See *Stone*, and *Hone*.

WHIFFLER, of a company in London. A young freeman, who goes before and waits on the company, on occaſions of public ſolemnity.

WHIP, or *Whip-ſtaff*, in a ſhip, a piece of timber in form of a ſtrong ſtaff, faſtened into the helm, for the ſteerſman, in ſmall ſhips, to hold in his hand; thereby to move the rudder, and direct the ſhip.

WHIRLWIND. A wind that riſes ſuddenly, is exceedingly rapid, and impetuous when riſen; but ſoon ſpent. There are ſeveral ſorts of whirlwinds, diſtinguiſhed by their peculiar names; as, the preſter, typho, turbo, exhydria, and ecnephias. The preſter is a violent wind, breaking forth with flaſhes of lightening: this is rarely obſerved, ſcarce ever without the ecnephias. Seneca ſays, it is a typho, or turbo, kindled or ignited in the air. The ecnephias is a ſudden and tempeſtuous wind, breaking out of ſome cloud, frequent in the Æthiopic ſea, particularly about the Cape of Good Hope, which the ſailors call travados. The exhydria is a wind burſting out of a cloud, with a great quantity of water; which only ſeems to differ in degree from the ecnephias, as this is frequently attended with ſhowers. A typho, or vortex, moſt properly called a whirlwind, or hurricane, is an impetuous wind, turning rapidly every way, and ſweeping all round the place, which frequently deſcends from on high: the Indians call it orancan; the Turks, and ſome others, oliphant: it is frequent in the eaſtern ocean, chiefly about Siam and China, and renders the navigation of thoſe parts exceeding dangerous.

WHITBY. A port-town of the north riding of Yorkſhire, lying in 7 min. of W. lon. and 45 deg. 30 min. of N. lat. on the German ſea, 13 miles N. W. of Scarborough, and 38 miles N. E. of York.

WHITE. One of the colours of natural bodies, which is not ſo properly ſaid to be any one colour, being a compoſition in all the colours; as is demonſtrated by Sir Iſaac Newton, who proves that thoſe bodies only appear white, which reflect all the kinds of coloured rays alike.

Hevelius affirms it as a thing moſt certain, that in the northern countries, animals, as hares, foxes, bears, and the like, become white in the winter time; and in ſummer reſume their natural colours.

Black bodies are found to take heat ſooner than white ones; becauſe the former abſorb, or imbibe rays of all colours, and the latter reflect all. Thus, black paper is ſooner put into a flame by a burning-glaſs, than white; and black cloaths hung up by the dyers in the ſun, dry ſooner than white ones.

WHITE-*arſenic*. See *Arſenic*.

WHITE-*aſhes*. See *Aſhes*.

WHITE-*cinnamon*. See *Cinnamon*.

WHITE-*copperas*. See *Copperas*.

WHITE-*cordage*. See *Cordage*.

WHITE-*diachylon*. See *Diachylon*.

WHITE-*glaſs*. See *Glaſs*.

WHITE-HAVEN. A port-town of Cumberland, lying in 3 deg. 16 min. of W. lon. and 59 deg. 30 min. of N. lat. on the Iriſh channel, 8 miles S. W. of Cockermouth, and 36 miles S. W. of Carliſle; being a port much frequented by the Iriſh, eſpecially for coals.

WHITE-*honey*. See *Honey*.

WHITE-*iſland*. See Cape *Verd* Iſlands.

WHITE-*lead*, is a ſort of ruſt of lead; or lead diſſolved with vinegar, much uſed by the painters. See *Lead*.

It is prepared two ways; either by reducing the lead into thin laminæ, ſteeping them in ſtrong vinegar, and every ten days ſcraping off the ruſt formed on the ſurface, repeating this till the lead is quite conſumed: or, by rolling the laminæ into cylinders like ſheets of paper, only ſo as there is a little ſpace left between the ſeveral folds or turns. Theſe laminæ they ſuſpend in the middle of earthen pots, at the bottom of which is vinegar. The pots being well cloſed, are buried in a dunghil for thirty days; after which, being opened, the lead is found, as it were calcined, and reduced into what they call ceruſſe, or white lead, to be broke into pieces, and dried in the ſun. It is uſed both in painting in oil and in water-colours, making a good colour in each; but is ſomewhat dangerous in the grinding and uſing it, as being a rank poiſon. Of this white lead, the paint uſed by the ladies called ceruſſe, is made.

WHITE-*linen*, is cloth of hemp, or flax, bleached by repeated lyes, and waterings on the ground. See *Bleaching*.

WHITE *Paper*, is that intended for writing, printing, and other uſes; in contra-diſtinction to brown paper, marble paper, blotting paper, and the like. See *Paper*.

WHITE *Pepper*, is black pepper blanched, or whitened, by ſhelling off its upper ſkin. See *Pepper*.

WHITE *Rent*. A rent or duty of 8 d. payable yearly, by every tinner in the county of Devon, to the duke of Cornwall.

WHITE *Salt*, is common or ſea ſalt, dried and calcined by the fire, ſo as not to leave any moiſture therein; which the chemiſts call decrepitated ſalt. There are ſome ſalts naturally white; and others that need to be whitened, either by diſſolving and purifying them in fair water, which is afterwards evaporated; or by means of fire, or by the ſun. See *Salt*.

WHITE *ſea*, is a bay of the Frozen ocean, in the north of Muſcovy, ſituated between Ruſſian Lapland and Samoieda, at the bottom of which ſea ſtands the city of Archangel. This was the only ſea the Ruſſians had any communication with till their conqueſt of Livonia.

WHITE *Soap*. See *Soap*.

Spaniſh WHITE, is a kind of fucus, uſed by the ladies to whiten the complexion, and hide the defects thereof; being made of tin glaſs diſſolved in ſpirit of nitre, and precipitated into a very fine powder, by means of ſalt water. See *Biſmuth*.

WHITE *Sugar*. See *Sugar*.

WHITE *Tartar*. See *Tartar*.

WHITE *Varniſh*. See *Varniſh*.

WHITE *Vitriol*. See *Vitriol*.

WHITE *Wax*, is yellow wax blanched, and purified by the ſun and dew. See *Wax*.

WHITE *Wine*, is that of a clear, bright, tranſparent colour, bordering on white; being ſo called to diſtinguiſh it from the red wines or clarets. The generality of white wines are made from white grapes; tho' there are ſome from black ones. See *Wine*.

WHITENING. See *Bleaching*.

WHITENING *of wax*. See *Wax*.

WHOODINGS, or *Hoodings*. A ſea term, uſed for planks, joined and faſtened along the ſhip's ſides into the ſtem.

WIBURG. A city and port-town of Ruſſian Finland, in the territory of Carelia, ſituated on the gulph of Finland, 70 miles N. W. of Peterſburgh, in 29 deg. of E. lon. and 61 deg. of N. lat.

WIC, denotes a place on the ſea ſhore, or on the bank of a river; tho' in the original Saxon it more properly ſignifies a ſtreet, village, or dwelling place, as alſo a caſtle.

WIGHT *Iſland*, or the *Iſle of Wight*. Part of the county of Southampton, ſeparated from it by a narrow channel, about 20 miles long, and 12 broad. See *Britiſh* Iſlands.

WILD *Honey*. See *Honey*.

WILOC. A kind of ſtuff or felt, prepared after the manner of hats; but ſomewhat more flexible, and of two ſorts: the one of the thickneſs of more than half an inch, and the other the double of that thickneſs. The Calmuc Tartars uſe the latter for mattraſſes; as alſo to cover their tents; and with the other they make cloaks, and houſings for their horſes.

WILLIAM's-*Fort*, or *Fort William*. A fort belonging to the Engliſh Eaſt India company, ſituated on the weſtern branch of the river Ganges, in the province of Bengal, in the Eaſt Indies, in Aſia, 130 miles N. E. of Balliſore, and 40 miles S. of Huegly, in 87 deg. of E. lon. and 22 deg. 45 min. of N. lat. See *India*.

WILLIAMSTAT. A port-town of Holland, lying in 4 deg. 20 min. of E. lon. and 51 deg. 40 min. of N. lat. on the ſea called Holland's deep, 14 miles S. of Rotterdam, and 16 N. W. of *Breda*.

WIND. A ſenſible agitation of the air, whereby a large quantity thereof flows out of one place or region into another.

The winds are divided into perennial, ſtated, and variable; they are alſo divided into general and particular.

Perennial, or *Conſtant* WINDS, are ſuch as blow the ſame way: of theſe we have a very notable one between the two tropics blowing conſtantly from eaſt to weſt, called the general trade wind.

Stated, or *Periodical* WINDS, are ſuch as conſtantly return at certain times; ſuch are the ſea and land breezes, blowing from ſea to land in the evening; and from land to ſea in the morning. Such alſo are the ſhifting, or particular trade winds, which for certain months in the year blow one way, and the reſt of the year the contrary way.

Variable, or *Erratic* WINDS, are ſuch as blow now this, now that way; are now up, now huſhed, without any rule or regularity, either as to time or place; ſuch are all the winds obſerved in the inland parts of England; tho' ſeveral of theſe claim their certain times of the day: thus, the weſt wind is moſt frequent about noon; the ſouth wind in the night; the north in the morning; and ſo of the reſt.

General WIND, is ſuch as, at the ſame time blows the ſame way, over a very large tract of ground, almoſt all the year: ſuch only is the general trade wind: but even this has its interruptions; for firſt, at land it is ſcarce ſenſible at all, as being broke by the interpoſition of mountains and valleys. 2. At ſea, near the ſhore, it is diſturbed by vapours, exhalations, and particularly winds, blowing from landward; ſo that it is chiefly conſidered as general, only at mid-ſea: where, 3dly, it is liable to be diſturbed, by clouds driving from other quarters.

Particular winds include all others, excepting the general trade winds. Thoſe peculiar to one little canton, or part, are called topical, or provincial winds: ſuch is the north-wind, on the weſtern ſide of the Alps, which does not blow above one or two leagues lengthwiſe, and much leſs in breadth: ſuch alſo is the pontias in France.

Phyſical cauſe of WINDS. Some philoſophers, as Des Cartes, and Rohault, account for the general wind, from the diurnal rotation of the earth; and from this general wind derive all the particular ones. The atmoſphere, inveſting the earth, and moving round it, that part will perform its circuit ſooneſt, which has the ſmalleſt circle to deſcribe; the air therefore near the equator will require ſomewhat a longer time to perform its courſe in, from weſt to eaſt, than that nearer the poles. Thus, as the earth turns eaſtward, the particles of the air near the equinoctial being exceeding light, are left behind; ſo that in reſpect of the earth's ſurface, they move weſtwards, and become a conſtant eaſterly wind; which opinion ſeems confirmed by this, that theſe winds are found only between the tropics, in thoſe parallels of latitude where the diurnal motion is ſwifteſt. But the conſtant calms in the Atlantic ſea, near the equator, the weſterly winds near the coaſt of Guinea, and the periodical weſterly monſoons under the equator in the Indian ſeas, declare the inſufficiency of this hypotheſis. Beſides, the air being kept cloſe to the earth by the principal of gravity, would in time acquire the ſame degree of velocity, that the ſurface of the earth moves with, as well in reſpect of the diurnal rotation, as of the annual about the ſun, which is about thirty times ſwifter. Dr. Halley, therefore, ſubſtitutes another cauſe, capable of producing a like conſtant effect, not liable to the ſame objections; but agreeable to the known properties of the elements of water and air, and the laws of the motion of fluid bodies. Such is the action of the ſun's beams upon the air and water, as he paſſes every day over the ocean, conſidered together with the quality of the ſoil, and the ſituation of the adjacent continents. According to the laws of ſtatics, the air, which is leſs rarefied or expanded by heat, and conſequently more ponderous, muſt have a motion towards thoſe parts thereof, which are more rarefied, and leſs ponderous, to bring it to an equilibrium; alſo the preſence of the ſun, continually ſhifting to the weſtward, that part towards which the air tends, by reaſon of the refraction made by his greateſt meridian heat, is with him carried weſtward; and, conſequently the tendency of the whole body of the lower air is that way. Thus, a general eaſterly wind is formed, which being impreſſed upon the air of a vaſt ocean, the parts impel each other, and ſo keep moving till the next return of the ſun, whereby ſo much of the motion as was loſt is again reſtored, and thus the eaſterly wind is made perpetual.

From the ſame principal it follows, that this eaſterly wind ſhould, on the north ſide of the equator, be to the northwards of the eaſt; and in ſouth latitudes to the ſouthwards thereof; for near the line the air is much more rarefied, than at a greater diſtance from it; becauſe the ſun is twice in a year vertical there, and at no time diſtant above 23½ degrees: at which diſtance, the heat being as the ſine of the angle of incidence, is but little ſhort of that of the perpendicular ray; whereas under the tropics, tho' the ſun ſtays longer vertical, yet he is a long time 47 degrees off; which is a kind of winter, wherein the air cools, as that the ſummer heat cannot warm it to the ſame degree with that under the equator. Wherefore, the air toward the northward and ſouthward, being leſs rarefied than that in the middle, it follows, that from both ſides it ought to tend towards the equator.

This motion, compounded with the former eaſterly wind, accounts for all the phænomena of the general trade winds; which, if the whole ſurface of the globe was ſea, would undoubtedly blow quite round the world, as they are found to do in the Atlantic, and Æthiopic oceans. But, ſeeing ſo great continents interpoſe, and break the continuity of the oceans, regard muſt be had to the nature of the ſoil, and the poſition of the high mountains, which are the two principal cauſes of the variation of the wind, from the former general rule: for if a country lying near the ſun prove to be flat, ſandy, and low land; ſuch as the deſarts of Libya are uſually reported to be; the heat occaſioned by the reflections of the ſun's beams, and the retention thereof in the ſand is incredible to thoſe who have not felt it: whereby the air is ſo much rarefied, that it is neceſſary the cooler and more denſe air ſhould run there, to reſtore the equilibrium. This is ſuppoſed to be the cauſe, why on or near the coaſt of Guinea, the wind always ſets in upon the land, blowing weſterly inſtead of eaſterly; there being ſufficient reaſon to believe, that the inland parts of Africa are prodigiouſly hot, ſince the northern borders thereof were ſo intemperate, as to give the ancients cauſe to conclude, that all beyond the tropics was uninhabitable thro' exceſs of heat.

From the ſame cauſe it happens, that there are ſuch conſtant calms in that part of the ocean called the Rains; for this tract being placed in the middle, between the weſterly winds blowing on the coaſt of Guinea, and the eaſterly trade winds, blowing to the weſtward thereof; the tendency of the air here is indifferent to either, and ſo ſtands in equilibrio between both: and the weight of the incumbent atmoſphere, being diminiſhed by the continual contrary winds blowing from hence, is the reaſon that the air here holds not the copious vapour it receives; but lets it fall in ſuch frequent rains.

But, as the cool and denſe air, on account of its greater gravity, preſſes upon the hot and rarefied, it is demonſ-

trable, that this latter muſt aſcend in a continued ſtream as faſt as it rarefies; and, that being aſcended, it muſt diſperſe itſelf, to preſerve the equilibrium; that is, by a contrary current, the upper air muſt move from thoſe parts where the greateſt heat is: ſo, by a kind of circulation, the north-eaſt trade wind below will be attended with a ſouth-weſterly wind above; and the ſouth-eaſt, with a north-weſt wind above. That this is more than a bare conjecture, the almoſt inſtantaneous change of the wind to the oppoſite point, which is frequently found in paſſing the limits of the trade-winds, ſeems to aſſure us; but that which above all confirms this hypotheſis, is the phænomenon of the monſoons, by this means moſt eaſily ſolved, and without it hardly explicable.

Suppoſing, therefore, ſuch a circulation as above, it is to be conſidered, that to the northward of the Indian ocean, there is every where land, within the uſual limits of the latitude of 30 degrees, both in Arabia, Perſia, India, and elſewhere; which, for the ſame reaſon as the Mediterranean parts of Africa, are ſubject to inſufferable heats, when the ſun is to the north, paſſing nearly vertical; but yet are temperate enough, when the ſun is removed towards the other tropic, becauſe of a ridge of mountains at ſome diſtance within the land, ſaid to be frequently in winter covered with ſnow, over which the air, as it paſſes, muſt be chilled. Hence it happens, that the air coming, according to the general rule, out of the north-eaſt, to the Indian ſea, is ſometimes hotter, ſometimes colder, than that which, by this circulation, is returned out of the ſouth-weſt; and, by conſequence, ſometimes the under current or wind is from the north-eaſt, ſometimes from the ſouth-weſt. That this has no other cauſe is clear from the times wherein theſe winds ſet, that is, in April, when the ſun begins to warm theſe countries to the north, and the ſouth-weſt monſoons begin to blow during the heats till October; then the ſun being retired, and all the things growing cooler northward, and the heat increaſing to the ſouth, the north-eaſt winds enter and blow all the winter, till April again. And it is undoubtedly from the ſame principle, that to the ſouthward of the equator, in part of the Indian ocean, the north-weſt winds ſucceed the ſouth-eaſt, when the ſun draws nearer the tropic of Capricorn. But, the induſtry of ſome late writers, has brought the theory of the production and motion of winds, to ſomewhat of a mathematical demonſtration.

Qualities and effects of WIND. Firſt, a wind blowing from the ſea is always moiſt: in ſummer it is cold, and in winter warm, unleſs the ſea is frozen up. This is demonſtrated thus: there is vapour continually riſing out of all water; as appears even hence, that a quantity of water being left a little while in an open veſſel, is found ſenſibly diminiſhed; but eſpecially if it is expoſed to the rays of the ſun, in which caſe the evaporation is beyond all expectation. By this means the air incumbent on the ſea becomes impregnated with a deal of vapour: but the winds blowing from off the ſea ſweep theſe vapours along with them, and conſequently are always moiſt. Again, water in ſummer receives leſs heat than terreſtrial bodies expoſed to the rays of the ſun; but in winter ſea water is warmer than the earth covered with froſt and ſnow: wherefore, as the air contiguous to any body, is found to partake of its heat and cold; the air contiguous to the ſea-water will be warmer in winter, and colder in ſummer, than that contiguous to the earth. Or thus, vapours raiſed from water, by the warmth of the ſun, in winter, are warmer than the air they riſe in, as appears from the vapours condenſing, and becoming viſible, almoſt as ſoon as they are got out into air. Freſh quantities of vapour, therefore, continually warming the atmoſphere over the ſea, will raiſe its heat beyond that of air over the land. Again, the rays of the ſun reflected from the earth into the air, in ſummer, are much more than thoſe from the water into air: the air, therefore, over the earth, warmed by the reflection of more rays than that over water, is warmer. Hence, ſea winds make thick, cloudy, hazy weather.

Winds blowing from the continent are always dry; in ſummer warm, and cold in winter: for there is much leſs vapours ariſing from the earth, than from water; and, therefore, the air over the continent will be impregnated with much fewer vapours. Add, that the vapours or exhalations, raiſed by a great degree of heat of the earth, are much finer and leſs ſenſible than thoſe from the water. The wind, therefore, blowing over the continent, carries but little vapour with it, and is accordingly dry. Further, the earth in ſummer is warmer than water expoſed to the rays of the ſun. Hence, as the air partakes of the heat of contiguous bodies; that over the earth in ſummer, will be warmer than that over the water.

After the like manner, it is ſhewn, that the land-winds are cold in winter. Hence, we ſee why land-winds make clear and cold weather.

The northerly and ſoutherly winds, however, which are commonly eſteemed the cauſes of cold and warm weather, Mr. Derham obſerves, are really rather the effect of the cold or warmth of the atmoſphere. Hence it is, that we frequently ſee a warm ſoutherly wind, on a ſudden changed to the north, by the fall of ſnow or hail; and that in a cold froſty morning, we ſee the wind north, which afterwards wheels about to the ſoutherly quarter, when the ſun has well warmed the air; and again, in the cold evening turns northerly or eaſterly.

WIND, in navigation, is the ſame agitation of the air, conſidered as ſerving for the motion of veſſels on the water. See *Sailing*.

The winds are divided, with reſpect to the points of the horizon from which they blow, into cardinal and collateral.

Cardinal WINDS, are thoſe blowing from the four cardinal points; eaſt, weſt, north, and ſouth.

Collateral WINDS, are the intermediate winds between two cardinal winds. The number of theſe is infinite, as the points from which they blow are; tho' only a few of them are conſidered in practice, that is, only a few of them have their diſtinguiſhed names. The ancient Greeks at firſt only uſed the four cardinal ones; at length they took in four more. Vitruvius gives us a table of 20, beſides the cardinals in uſe among the Romans. The moderns, as their navigation is much more perfect than the antients, have given names to 28 collateral winds, which they range into primary and ſecundary. And the ſecundary they ſubdivide into thoſe of the firſt and ſecond order.

The Engliſh names of the primary collateral winds and points, are compounded of the names of the cardinal ones, north and ſouth being ſtill prefixed.

The names of the ſecond collateral winds of the firſt order, are compounded of the names of the cardinals, and the adjacent primary one. Thoſe of the ſecond order are compounded of the names of the cardinal, or the next adjacent primary; and the next cardinal, or the next adjacent primary; and the next cardinal, with the addition of the word *by*. The diſtinct names for each are expreſſed in the following table.

Names of the winds, and points of the compaſs.

	Diſtances of the points from the North. Deg.	Min.
1. North	0	0
2. North by eaſt	11	15
3. North-north-eaſt	22	30
4. North-eaſt by north	33	45
5. North-eaſt	45	0
6. North-eaſt by eaſt	56	15
7. Eaſt-north-eaſt	67	30
8. Eaſt by north.	78	45
	From the Eaſt.	
9. Eaſt	0	0
10. Eaſt by ſouth	11	15
11. Eaſt ſouth-eaſt	22	30
12. South-eaſt by eaſt.	33	45
13. South eaſt	45	0
14. South-eaſt by ſouth	56	15
15. South ſouth-eaſt	67	30
16. South by eaſt	78	45
		17. South

		From the south.	
17.	South	0	0
18.	South by weſt	11	15
19.	South-ſouth-weſt	22	30
20.	South-weſt by ſouth	33	45
21.	South-weſt	45	0
22.	South-weſt by weſt	56	15
23.	Weſt-ſouth-weſt.	67	30
24.	Weſt by ſouth	78	45
		From the weſt.	
25.	Weſt	0	0
26.	Weſt by north	11	15
27.	Weſt-north-weſt	22	30
28.	North-weſt by weſt	33	45
29.	North-weſt	45	0
30.	North-weſt by north	56	15
31.	North-north-weſt	67	30
32.	North by weſt	78	45

For the uſe of the winds in navigation, ſee *Sailing*, *Rhumb*, and *Compaſs*.

Quarter-WIND. See *Quarter*-wind.

Whirl-WIND. See *Whirl*-wind.

WIND-*inſtruments*, in muſic, are ſuch inſtruments as are played by the wind, chiefly by the breath; in contradiſtinction to ſtring-inſtruments, and inſtruments of the pulſatile kind. Thoſe now in uſe are the flute, bagpipe, hautboy, trumpet, and others.

WINDLASS, or *Windlace*. A machine uſed to raiſe large weights, as guns, ſtones, timber, anchors, and the like. It is very ſimple, conſiſting only of an axis, or roller, ſupported horizontally at the two ends, by two pieces of wood, and a pulley. The two pieces of wood meet a-top, being placed diagonally, ſo as to prop each other. The axis or roller goes through the two pieces, and turns in them, the pully being faſtened a-top where the pieces join.

WINDLASS, in a ſhip, is an inſtrument in a ſmall veſſel, placed upon the deck, abaft the foremaſt, conſiſting of a piece of timber; having ſix or eight ſquares, and turned by hand-ſpikes, put into holes made for that purpoſe. This windlaſs will purchaſe more than any capſtan in the weighing of an anchor, or other heavy merchandiſe, without any danger to thoſe that heave; for if any of the handſpikes ſhould break, the windlaſs would pull of itſelf.

WINDMILL. See *Mill*.

WIND-TACKLE-*blocks*, in a ſhip, are the main double blocks, or pully; which being made faſt to the end of a ſmall cable, ſerve for the hoiſting of the goods into the ſhip.

To WIND, or *wend*, in a ſhip, ſignifies to bring her head about. How winds, or wends, the ſhip? is a queſtion aſked by mariners concerning a ſhip under ſail, ſignifying as much as, Upon what point of the compaſs does ſhe lie with her head?

WIND-*taught*. A ſea-term, implying as much as, Stiff in the wind. Too much rigging, high-maſts, or any thing catching or holding wind aloft, is ſaid to hold a ſhip wind-taught; by which they mean, that ſhe ſtops too much in her ſailing, before a ſtiff gale of wind. Again, when a ſhip rides in a main ſtreſs of wind and weather, they ſtrike down her top-maſts, and bring her yards down; otherwiſe ſhe would hold too much wind, or be too much diſtended, and wind-taught.

WINDWARD *iſlands*. See *Caribbee* iſlands.

WINDWARD *tide*, in the ſea-language. A tide which runs against the wind. See *Tide*.

WINE. A brisk, agreeable, ſpirituous, and cordial liquor, drawn from vegetable bodies, and fermented.

The character of wine, according to Boerhaave, is, that the firſt thing it affords by diſtillation ſhould be a thin, oily, inflammable fluid, called a ſpirit. This diſtinguiſhes wines from another claſs of fermented vegetable juices, called vinegar; which, inſtead of ſuch ſpirit, yield for the firſt thing an acid, inflammable matter. See *Vinegar*.

All ſorts of vegetables, fruits, ſeeds, and roots, afford wine; as grapes, currants, mulberries, elder, cherries, apples, pulſe, beans, peaſe, turnips, raddiſhes, and even graſs itſelf.

Hence, under the claſs of wines, or vinous liquors, come not only wines abſolutely ſo called; but alſo ale, cyder, and the like. See *Ale*, *Beer*, and *Cyder*.

WINE is, in a more peculiar manner, appropriated to that which is drawn from the fruit of the vine, by ſtamping its grapes in a vat, or cruſhing and expreſſing the juice out of them in a preſs, and then fermenting it. See *Vine*.

The goodneſs of wine conſiſts in its being neat, fine, bright, and briſk, without any taſte of the ſoil; of a clean, ſteady colour; having a ſtrength, without being heady; a body, without being ſour; and keeping, without growing hard or eager.

Wine being a liquor moſtly of foreign produce, the various names, forms, kinds, and diſtinctions thereof, are borrowed from the countries where they are produced; the principal of which are France, Spain, and Portugal.

Wine, in France, is diſtinguiſhed from the ſeveral degrees and ſteps of its preparation, into *mere goutte*, or mother-drop; and muſt, ſurmuſt, or ſtum.

The firſt is the *virgin wine*, or that which runs of itſelf out of a tap of the vat wherein the grapes are laid, before the vintagers enter to tread or ſtamp the grapes. The other is the wine, or liquor in the vat, after the grapes have been trod or ſtamped.

Preſſed wine, is that ſqueezed with a preſs out of the grapes, half bruiſed with treading. The huſks left of the grapes, are called rape, murk, or mark; by throwing water upon which, and preſſing them afreſh, they make a liquor for ſervants uſe, anſwerable to the Engliſh ciderkin, and called boiſſon; which is of ſome uſe in medicine, for the cure of diſorders occaſioned by viſcid humours.

Sweet wine, is that which has not yet worked, or fermented.

Bouru, is that which has been prevented from working, by caſting in cold water.

Cuvé, or worked wine, that which has been let work in the vat, to give it a colour.

Cuit, or boiled wine, that which has had a boiling before it worked, and which by that means ſtill retains its native ſweetneſs.

Paſſe, or ſtrained wine, that made by ſteeping dry grapes in water, and letting it ferment of itſelf.

Wines are alſo diſtinguiſhable with regard to their colour, into white wine, red wine, claret-wine, pale-wine, roſe or black wine; and with regard to their country, or the ſoil that produces them, into French wines, Spaniſh wines, Rheniſh wines, Hungary wines, Greek wines, Canary wines, and many other kinds; but more particularly into Port wine, Madeira wine, Burgundy wine, Champaign wine, Falernian wine, Tokay wine, Schiras wine, and the like.

Wines again are diſtinguiſhed with regard to their quality, into ſweet wines; rough, or dry wines; and rich, or luſcious wines; of which laſt ſome are exceedingly ſweet, others ſweet and poignant; all chiefly uſed by way of dram after meals. Such are French Frontigniac, the Canary, the Hungary, the Tokay, the Italian Monteſiaſcone, and the Perſian Schiras; as alſo the malmſey wines of Candia, Chio, Leſbos, Tenedos, and other iſlands of the Archipelago, which antiently belonged to the Greeks, but now to the Turks; ſo that theſe are ſometimes called Greek wines, and ſometimes Turky wines.

Wine is alſo variouſly denominated, according to its ſtate, circumſtances, and qualities.

Natural wine, is ſuch as comes from the grape, without further mixture, or ſophiſtication.

Brewed, or *adulterated wine*, is that wherein ſome drug is added, to give it ſtrength, fineneſs, flavour, briſkneſs, ſweetneſs, or ſome other good quality that is wanted.

Pricked, or *eager wine*, is that turned ſour.

Flat wine, is that fallen weak, and vappid, for want of being drank in time.

Sulphured wine, is that put in caſks where ſulphur has been burnt, to fit it for keeping, or for carriage by ſea.

Colour-wine, is ſome thick wine, of a very deep colour, ſerving to dye the wines which are too pale; as the black wine, in uſe among vintners.

Chip-wine,

Chip-wine, is that poured on chips of beech-wood, to fine or ſoften it.

There is alſo a ſort of malmſey wine made by boiling of muſcadine.

The method of making and fining wine. In the ſouthern parts of France, the way is, for red wines, to tread or ſqueeze the grapes between the hands, and to let the whole ſtand, juice and huſks, till the tincture comes to their liking; after which they preſs it: but for white wines, they preſs the grapes immediately; when preſſed, they tun the muſt, and ſtop up the veſſel; leaving only the depth of half a foot, or little more, empty, to give room for it to work. Ten days after, they fill up the veſſel with ſome other wine, that will not provoke it to work again; which they repeat from time to time, becauſe new wine ſpends itſelf a little before it comes to perfection.

About Paris, and other parts of France, they let the murk and muſt ſtand two days and nights for white wines; and at leaſt a week for claret wines before they turn it: but, while it continues working, it is kept as warm as poſſible. Some, upon ſtopping it entirely up, roll the caſk about the cellar, to mix the liquor with the lees; and, after ſettling a few days, rack it off with great improvement. To fine it down, they put ſhavings of green beech into the veſſel, having firſt taken off all the rind, and boiled them an hour in water, to extract their rankneſs, and afterwards dried them in the ſun, or in an oven. A buſhel of theſe ſhavings ſerve for a tun of wine: they put the liquor into a gentle ferment, purify it in 24 hours, and alſo give an agreeable flavour. The chips being waſhed, ſerve again and again, till almoſt quite conſumed.

Some ſweeten their wines with raiſins of the ſun trod in the vat with the grapes, having been firſt plumped by boiling; others, by boiling half the muſt, ſcumming it, and turning it up hot with the other.

For Engliſh wine, the method recommended by Mr. Mortimer is, firſt to gather the grapes when very dry, to pick them from the ſtalks, then to preſs them, and let the juice ſtand 24 hours in the vat covered: afterwards, to draw it off from the groſs lees, then put it up in a caſk; add a pint, or quart, of ſtrong red or white port to every gallon of juice; let the whole work, bunging it up cloſe; and letting it ſtand till January, then bottle it in dry weather. By this method, he aſſures us, he has made Engliſh wine as good as any the beſt and pureſt French wine, drank either in Paris or Champaign.

Mr. Bradley chuſes to have the liquor, when preſſed, ſtand with the huſks, ſtalks and all, in the vat to ferment for 15 days. He adds, that, according as the vines have been managed, the wine will be ſtronger or weaker. For example, thoſe which run at liberty up high trees, and are never pruned, make the ſmalleſt wines; thoſe kept tied to ſtakes about four feet high, and which have their branches duly pruned, ſtronger wines; and thoſe neareſt the ground the ſtrongeſt of all.

The force of the fermenting wine is very great; being able, if cloſe ſtopped, to burſt through the ſtrongeſt caſk. The readieſt and only way to abate this fermentation, is by the fume of burning ſulphur. But when wine already made is upon the fret, or, by any alteration in the affair, begins to ferment again; the way uſed by the vintners and wine-coopers to ſave it, is by the flame of common ſulphur, or a lighted match dipped in it, which, held under a caſk, juſt ready to burſt its hoops, calms its fury, and makes it immediately ſubſide. See *Sulphur*.

The age of WINE, is properly reckoned by leaves: thus they ſay, wine of two, four, ſix leaves, to ſignify a wine of two, four, or ſix years old; taking each new leaf put forth by the vine, ſince the vine was made, for a year. Among the Romans, the age of wines was, in a kind, a criterion of its goodneſs. Horace, in his odes, which may be called Bacchic ſongs, boaſts of his drinking Falernian wine born, as it were, with him, or which reckoned its age from the ſame conſuls. Pliny mentions wines kept above 100 years, and yet potable; others he ſpeaks of kept 200 years, which by that time were reduced to the conſiſtence of honey: but the moderns keep no wines to any ſuch age. Where they are kept the longeſt, as in Italy and Germany, there are ſcarce any to be found above 15 leaves. In France, the wines that keep beſt, are thoſe of Dijon, Nantz, and Orleance, which are reckoned ſuperannuated at five or ſix leaves old.

There is ſcarce a wine of the produce of France, but what the French import into foreign countries on their own bottoms; particularly to the ports of the Baltic and the North, the French Antilles iſlands, Cayenne, Quebec, and the other French colonies in North America, the coaſts of Italy, Tunis, Algiers, ſome other parts of the Mediterranean, and ſome coaſts of Africa.

What is exported by the French merchants is very conſiderable; but it comes very ſhort of thoſe exported by other nations, and brought into their own countries. The Engliſh, Iriſh, Scots, Dutch, Flemmings, and Hamburghers, are thoſe who, in time of peace, export moſt: but when the war was carried on between France, England, and Holland, in the reign of Lewis XIV. the Danes, Swedes, and Hamburghers, carried on this trade, either upon their own account, or for ſuch nations as were prohibited the French commerce.

It is moſt commonly at Bourdeaux, Rochelle, Nantz, and Rouen, that ſtrangers take in their cargoes of French wine.

Formerly, when the wine-ſeaſon proved abundant, and a commerce was open with the Engliſh and Dutch, there were frequently bought up by them to the amount of 80 and 100,000 tons; the Bourdeaux barique of wine being to contain 110 pots, comprehending the lees, to weigh 500 lb. and the the ton 2000 lb.

The Engliſh alſo exported great quantities of the wines of Lower Navarre and Bearn, with thoſe of the produce of the heart of the kingdom, as of Mantes, Burgundy, and Champaign; which latter they loaded their ſhips with at Rouen, Dunkirk, and Calais.

Middleburgh has always paſſed for the Dutch ſtaple of French wine; though Amſterdam and Rotterdam are as well, if not better ſtocked.

Hamburgh is the chief town in the North for a briſk trade of French wine; where it is computed there is ſold yearly about 3000 hogſheads, almoſt all of white wine; which the Hamburghers themſelves export from Nantz, Rochelle, and Bourdeaux.

Lubec requires about 2000 hogſheads; Koningſberg 500; Riga, Revel, and Narva, about 200 each; and Stetin only 100.

The French wines imported to Bremen ſhould be white and ſtrong; ſuch are thoſe of Anjou, Cogniac, and the upper part of Guyenne. Thoſe imported to Dantzick are for Pruſſia, being about 500 hogſheads: but French wines are little eſteemed throughout the reſt of Poland, becauſe the Poles prefer that of Hungary.

The Engliſh and Dutch, particularly the former, import conſiderable quantities of Bourdeaux and Anjou wines to Archangel; three-fourths of which is white, and the other red.

About 600 hogſheads of French wine are yearly ſold in Norway; but a leſs quantity is required for Copenhagen and Elſinor.

About 500 hogſheads are ſent to Stockholm. The French import a great part of theſe wines to the North; but the Dutch carry more.

The French carry on ſomething of a commerce in Spaniſh wines; but nothing in compariſon to that of the Engliſh and Dutch, either for their own particular uſe, or for their trade in the North; where Spaniſh wine, in ſeveral places, is preferred to French wine.

The ports of Spain, where foreigners take in their cargoes of wine, are Malaga, Alicant, Lucar, and Cadiz. In time of peace there are yearly exported from theſe ports about 4000 butts, ſometimes 5000, and before the war for the Spaniſh ſucceſſion very often 15,000.

Among Spaniſh wines may be ranked thoſe of the Canaries. See *Canary* iſlands.

The French ſay the Portugueſe wines have very unwholſome qualities: but the Engliſh politically prefer them before thoſe of France; for, by the treaty made between Queen Anne and Peter II. of Portugal, the wines of Portugal are to be admitted into Great Britain for a third part of cuſtom or duty leſs than the wine of France. Under the denomination of Portugal wines may be placed thoſe of Madeira; which are of a much more exalted quality, and delicious taſte; being principally bought up by the Engliſh and Dutch; who ſometimes export them directly from Madeira, but oftener from Portugal. See *Madeira* iſlands.

Rheniſh and Moſelle wines afford a foreign commerce; the greater part of which, beſides what is conſumed in the country, bought up by the Engliſh and Dutch. Hungary ſupplies Auſtria, and the other hereditary dominions of the Emperor, with wine, as alſo Poland; the Tokay wine of this country being much of the ſame nature as the Canary wine; but that produced in other parts retains a fumous quality, not unlike the ſtrong wines of the river of Bourdeaux.

The beſt of Italian wines are thoſe of Genſani, Albano, and Caſtello-Gandolfo in the neighbourhood of Rome; next, the Greek wine of Naples, and the Lachryma Chriſti; afterwards the different kinds of Florence wines; and, laſtly, thoſe of Piedmont and Montferrat. The Italians rather make preſents of their wines to ſtrangers, than trade in them; except in the Florence wines, which are exported to England, and other countries, in great quantities from Leghorn.

By the ſtatute of the 2d of Henry VI. &c. wine, oil, and honey, the ton is to contain 252 gallons, the pipe or butt 126 gallons, the hogſhead 63 gallons, the barrel 31½ gallons, and the rundlet 18½ gallons.

By the 12th of Charles II. wines imported, are diſcharged from the impoſition of exciſe: and, by the 1ſt of James II. wine or vinegar landed before payment and ſecurity of the impoſt duty, are forfeited, or their value, and the importers are to pay the ſaid duty notwithſtanding.

Wines, if firſt landed in the outports, and carried afterwards to London by certificate, are to pay ſo much more as they paid ſhort of the duties due in London.

No wine, exceeding the quantity of 10 gallons, imported into any of the outports, is to be brought from thence to London, or within 20 miles of the Royal Exchange, without paying the outport of London duty. But if any quantity of wine, exceeding in bottles 3 dozen, or in caſks 10 gallons, are brought in the ſame carriage to London, or within 20 miles of the Exchange, without a certificate of the reſpective duties being paid, &c. are to be forfeited.

Every hogſhead run out, and not full 7 inches, or above, and every pipe or butt not above 9 inches left therein, are to be accounted for outs, and no duty is to be paid for the ſame.

By the 1ſt of Queen Anne, wine of the growth of Hungary, may be imported from Hamburgh, paying duty as Rheniſh wines; and 12 *per cent.* to be allowed for leakage.

By the 6th and 12th of Geo. I. damaged, corrupt or unmerchantable wine, upon the importer's refuſing to pay or ſecure the duties, may, at the landing, be delivered up into the cuſtody of the officers of the cuſtoms, in order to be publickly ſold to be diſtilled into brandy, or made into vinegar; and that they ſhall not be uſed for any other purpoſe, ſecurity muſt be taken; which may be diſcharged upon a certificate, within three months after delivery, that they have been ſo uſed.

The produce of ſuch ſale is to be paid to the importer, by certificate, as a compenſation for the freight, &c. but ſuch allowance muſt not exceed 4 l. for every ton of wine of the growth of France and Germany, and 8 l. for every ton of all other wines ſo delivered up: and if there be any overplus beyond the ſaid allowance, it muſt be placed to the duties out of which the charges have been paid.

But, by the 8th and 11th of George I. no allowance may be made for ſuch wines, unleſs they are imported in caſks on board a merchant's ſhip directly from the place of their growth, or the uſual place of their firſt ſhipping.

Except ſaved from ſhips ſtranded; which are to enjoy the ſame allowances as if imported in the ſhip wherein they were firſt laden.

By the 1ſt of George II. wine, except of the growth of the dominions of the Great Duke of Tuſcany, in open flaſks, or of Turky, or any other parts of the Levant ſeas, may not be imported in flaſks or bottles, or in veſſels, or caſks, which ſhall contain leſs than 25 gallons, upon forfeiture thereof, or the value.

From the ſtate of the duties paid by wines, and other liquors brought into England, it appears, that French wines imported by Engliſhmen into the port of London pay 55 l. 16 s. 8 d. *per* ton; thoſe imported by the ſame into other ports, 51 l. 13 s. 6 d. but thoſe brought by foreigners into the port of London pay 61 l. 15 s. 10 d. and into other ports 57 l. 12 s. 8 d. Spaniſh, Italian, muſcadine, malmſey, and other Greek wines, imported by the Engliſh into the port of London, pay 27 l. 1 s. 10 d. and brought by the ſame into the other ports 23 l. 4 s. 9 d. but the ſame wines brought to London by foreigners pay 33 l. 7 s. 0¾ d. Portugal, Rheniſh, and Hungary wines brought to London by Engliſh veſſels, pay 26 l. 10 s. 3 d. into the other ports 22 l. 7 s. 2 d. but the ſame wines imported to London by foreigners, pay 32 l. 9 s. 5 d. and ino other ports 28 l. 6 s. 3 d. See *Cuſtoms*.

There were imported into the port of London in one year, from divers countries, the following quantities of wine; from Portugal 18,208 tons; from Spain 10,255; from France 1105; from Germany and Holland 476; making together 30,044; and the duties on wines and vinegar are generally about 500,000 l. a year.

Priſage of WINE. See *Priſage*.

Spirit of WINE. See *Spirit*.

Lees of WINE, are the impurities thereof, or the thick ſediment, remaining at the bottom of the caſks, when the wine is drawn out.

WINE, is alſo a denomination applied in medicine and pharmacy, to ſeveral mixtures and compoſitions, wherein the juice of the grape is a principal ingredient. The medicated wines make a conſiderable article in diſpenſatories, in quality of diet-drinks; ſome being denominated from the ingredients uſed in them, others from the intentions wherewith they they are preſcribed, and ſome from their qualities.

Bitter WINE, is an infuſion of certain bitter ſtomachic herbs, as gentian-roots, juniper berries, tops of centaury, orange and lemon peel, in white port, or other white wine, taken by way of whet in a morning, to reſtore the palled ſtomach after a debauch, and bring its fibres to their due tenſion.

Chalybeat, or *Steel* WINE, is prepared of ſteel filings and ſaffron, infuſed and filtered; being good in the chloroſis, and removes obſtructions in the viſcera.

Vinum benedictum, the *bleſſed* WINE, is made of crocus metallorum and mace, infuſed in wine; which was formerly a celebrated emetic, but now almoſt out of uſe, on account of its roughneſs.

Elecampane WINE, is an infuſion of the root of that plant, with ſugar and cinnamon, in white port; which cleanſes the viſcera, prevents diſorders and obſtructions of the lungs, and is good in aſthmatic caſes, and cachexies.

Hog-lice WINE, is prepared of hog-lice put alive in white port; and, after ſome infuſion, preſſed and ſtrained out; to which is added ſaffron, ſalt, or ſteel; being recommended againſt the jaundice, dropſy, and cachectic habits.

Pectoral WINE, is prepared of liquorice, ſaffron, coriander ſeeds, carraway, aniſe, ſalt of tartar, pennyroyal, and hyſſop-waters, digeſted with canary wine, and ſtrained; being a good expectorant, helping to deterge and cleanſe the lungs.

Viper WINE, is a preparation of female vipers, infuſed ſix months in canary wine; which is a great reſtorative, and of ſervice in cutaneous eruptions.

WINE of ſquills, is an infuſion of thoſe onions in white wine for 40 days; after which the ſquills are ſtrained out, and the liquor preſerved for uſe; being a gentle emetic, and good againſt the inundations of rheum.

WINE-*meaſure*. See *Meaſure*.

WINE-*licence office*. An office kept in Arundel-ſtreet, in the Strand, Weſtminſter; under the management of five commiſſioners; whoſe buſineſs it is to grant licences to the ſeveral retailers of wine in all parts of the kingdom, who are rated according to their reſpective returns: but the free vintners of London are not under their cogniſance.

WINTER'S *bark*. See *Cortex*, and *Cinnamon*.

WINTERTONNESS. The north cape of the county of Norfolk, 4 miles north of Yarmouth.

WIRE. A piece of metal drawn through the hole of an iron, into a thread, of a fineneſs anſwerable to the hole it is paſſed through; which is frequently drawn ſo fine, as to be wrought along with other threads of ſilk, wool, flax, or hemp; whereby they become a conſiderable article in the manufactures. The metals moſt commonly drawn into wire, are gold, ſilver, copper, and iron: hence there is gold wire, ſilver wire, and iron wire; as in the following articles.

Gold and ſilver WIRE. What is called gold wire, is made of cylindric ingots of ſilver, covered over with a ſkin of gold, and thus drawn ſucceſſively through a great number of holes, each ſmaller and ſmaller, till at laſt it is brought to a fineneſs exceeding that of a hair. That prodigious ductility which makes one of the diſtinguiſhing characters of gold, is no where more conſpicuous than in this gilt wire. A cylinder of 48 ounces of ſilver, covered with a coat of gold, only weighing 1 oz. Dr. Halley informs us, is commonly drawn into a wire, 2 yards of which only weigh 1 grain; whence 98 yards of the wire only weigh 49 grains, and one ſingle grain of gold covers the 98 yards: ſo that the ten thouſandth part of a grain is above half an inch long. The ſame author, computing the thickneſs of the ſkin of gold, found it to be only $\frac{1}{34300}$ part of an inch; ſo that even a microſcope does not diſcover any appearance of the ſilver underneath.

M. Rohault obſerves, that a like cylinder of ſilver covered with gold, 2 feet 8 inches long, and 2 inches 9 lines in circumference, is drawn into a wire 307,200 feet long, that is, into 115,200, its former length.

Mr. Boyle relates, that 8 grains of gold covering a cylinder of ſilver, is commonly drawn into wire 13,000 feet long. See *Gold* wire.

Gold and ſilver WIRE *drawers company*. See *Gold* and ſilver wire drawers company.

Silver WIRE, is the ſame with gold wire; except that the latter is gilt, or covered with gold, and the former is not. See *Silver*.

Braſs WIRE, is that drawn after the ſame manner as thoſe above mentioned; of which there are ſeveral ſizes, ſuited to the ſeveral kinds of works; the fineſt being uſed for the ſtrings of muſical inſtruments, as ſpinets, harpſichords, manichords, and the like.

The pinmakers uſe great quantities of braſs wire of various ſizes, to make their pins. See *Pin*.

Iron WIRE, is called by the French *fil d'archal*; the reaſon of which their authors are not agreed upon. That celebrated etymologiſt M. Menage, derives it from *filum* and *aurichalcum*; but others, more converſant in the commerce thereof, deduce it from one Richard Archal, the firſt inventor thereof.

There are various ſizes of this wire, from $\frac{1}{2}$ to $\frac{1}{10}$ of an inch diameter. The ſmalleſt ſizes are uſed to ſtring muſical inſtruments. Great quantities of iron wire are brought to England yearly from the the Baltic; which are partly ſpent at home, and partly exported to France. By acts of parliament, paſſed in 3d Edward IV. 1ſt Richard III. and 2d William and Mary, wire of iron, as card-wire, and all ſorts of iron wire ſmaller than fine wire, and ſuperfine and wool cards, or any other wares of iron wire, may not be imported, unleſs from Ireland, or wrecked, upon forfeiture thereof.

WISBY, or *Wiſbuy*. A port-town of Sweden, ſituated on the weſt-coaſt of the iſland of Gothland, in the Baltic ſea, 120 miles ſouth-eaſt of Stockholm, in 18 deg. of E. lon. and 57 deg. 30 min. of N. lat.

WISBY *laws*, or the laws of Wiſby, were a collection of maritime laws and ordinances, which the Swedes compoſed in this city, when it was one of the moſt mercantile places in Europe.

Theſe laws conſiſted of 70 articles, which are ſtill preſerved in the Teutonic language; being obſerved by the Germans, Swedes, Danes, Flemmings, and all the people of the North: but none have been ſo curious as to preſerve the date, and the remembrance of the time when they were compoſed and publiſhed.

WOAD. A drug uſed by the dyers to give a blue colour. It ariſes from a ſeed, ſown annually in the ſpring, which puts forth a plant called glaſtum ſativum, whoſe leaves reſemble thoſe of rib-wort-plantain. They have uſually three, four, or five crops of leaves every year; but only the two or three firſt are of any value; whereof the firſt are beſt, and the reſt in their order.

When the leaves are ripe, they crop or gather them; after which they carry them to a woad-mill to grind them ſmall: they are then laid 8 or 10 days in piles or heaps, and at laſt made into a kind of balls, which are laid in the ſhade on hurdles to dry. This done, they break or grind them to powder; and, when ground, ſpread it on a floor, and water it, which they call couching. Here they let it ſmoke and heat, till, by torrifying it every day, it becomes quite dry, which they call ſilvering; and, a week after this, it is in a condition to be uſed in dying. The antient Britons were accuſtomed to dye their bodies with woad: and ſome hold it was from this plant that glaſs took its denomination; though others derive both glaſs and glaſtum from the Britiſh *glas*, which to this day denotes a blue colour. See *Glaſs*, and *Paſtel*.

A WOAD *blue*, is a very deep blue, almoſt black; being the baſe of ſo many ſorts of colours, that the dyers have a ſcale, whereby they compoſe the various caſts or degrees of woad, from the brighteſt to the deepeſt. See *Dying*.

WOLFERDYKE. An iſland of the United Netherlands, in the province of Zeland, ſituated between the iſlands of North Beveland and South Beveland.

WOLGA, or *Volga*. A river of Ruſſia, which riſes in the north of that empire; runs ſouth-eaſt, paſſing the cities of Jereſlaf, Kaſan, and Bulgar; then entering Aſiatic Ruſſia, continues its courſe due ſouth to Kamiſinca; from whence it runs ſouth-eaſt; and, paſſing by Aſtracan, falls into the Caſpian ſea, 50 miles below that city, having run a courſe of between 2 and 3000 miles. It is deep enough great part of the way to carry large ſhips; but the mouth of it is ſo choaked up with ſand, that loaded ſhips cannot enter it; for which reaſon the Ruſſian ſhips lie at an iſland without the mouth of the Wolga. It was by this river that the Ruſſian merchants of England endeavoured to eſtabliſh a trade with Perſia; in which they have been unhappily circumvented. See *Ruſſia*.

WOLGAST. A city and port-town of Germany, in the circle of Upper Saxony, and duchy of Pomerania, ſubject to Sweden, ſituated 30 miles ſouth-eaſt of Stralſund, in 14 deg. 5 min. of E. lon. and 54 deg. 12 min. of N. lat.

WOMBS. A ſort of tanned hides. See *Hide*.

WOOD. A ſolid ſubſtance, whereof the trunks and branches of trees conſiſt, and deriving its growth from certain juices in the earth; the wood being all that part in a tree included between the bark and the pith.

Woods are diſtinguiſhed into various kinds, with regard to their natures, properties, virtues, and uſes. Of wood, conſidered according to its qualities, whether uſeful, curious, or medicinal, the principal is that called timber, uſed in building houſes, laying floors, roofs, and making machines. See *Timber*.

Woods valued on account of their curioſity, are cedar, ebony, box, mahogony, calambo, and others; which, on account of their extraordinary hardneſs, agreeable ſmell, or beautiful poliſh, are made into tables, beds, combs, and the like.

The principal medicinal woods are guiac, which the Spaniards call ligno ſancto; aloes, or agallochum; ſaſſafras, nephriticum, ſantal, ſarſaparilla, aſpalathum, and eagle-wood.

Woods uſed in dying, are the Indian wood, Brazil, Campechy, and others.

Cord-

Cord-WOOD, denotes wood for the fire, generally made of the branches or loppings of trees, piled up in order; which is limited to be below 17 inches, and above 6 inches thick, and at leaſt 3 feet and a half long. See *Cord*-wood.

WOOD, in geography. A multitude of trees, extended over a large tract of land, and propagated without culture. See *Foreſt*.

The generality of woods conſiſt of trees of one kind. At Cape Verd, in Africa, are woods of orange and lemon trees; at Ceylon, are woods of cinnamon-trees; in the Molucca iſlands, are woods of caraway-trees; in the iſlands of Nero, Lontour, and Loſgain, are woods of nutmeg-trees; in Brazil, are woods of Brazil-trees; in Numidia, woods of date-trees; and in Madagaſcar, woods of tamarind-trees. See *Lumber*.

WOOD *and wood*, in the ſea-language, is when two pieces of timber are ſo let into each other, that the wood of the one joins cloſe to the other.

WOOD-*meaſure*. See *Meaſure*.

WOODMONGER. A perſon who ſells billeting for fires; and alſo one who deals in timber.

WOODMONGERS *company of London*, was incorporated with that of the carmen of the city of London, by letters-patent of the 3d of James I. dated the 8th of Auguſt 1605; with whom they continued united till the year 1668; when, for their mal-practices, they judged it convenient, to avoid a greater puniſhment, to ſurrender their charter. However, by an act of common council in the year 1694, they obtained a privilege for keeping 120 carts, excluſive of the 420 public ones kept by the carmen, for the more effectual carrying on their buſineſs.

WOOF, among manufacturers, are the threads which the weavers ſhoot acroſs, with an inſtrument called the ſhuttle, between the threads of the warp, which form the web.

The woof is of a different matter, according to the piece to be wrought: though, in taffety, both woof and warp are ſilk. In mohair, the woof is uſually wool, and the warp ſilk. In ſatins, the warp is frequently flax, and the woof ſilk.

WOOL. The hair or covering of ſheep; which, when waſhed, ſhorn, dreſſed, combed, ſpun, and wove, makes ſeveral kinds of cloths and ſtuffs, for apparel and furniture.

While the wool remains in the ſtate it was firſt ſhorn off the ſheep's back, and not ſorted into its different kinds, it is called fleece; each fleece conſiſting of wool of various qualities, and degrees of fineneſs, which the dealers therein take care to ſeparate. The French and Engliſh uſually ſeparate each fleece into three ſorts. 1. Mother-wool, which is that of the back and neck: 2. The wool of the tails and legs: 3. That of the breaſt, and under the belly. The Spaniards make the like diviſion into the three ſorts; which they call prime, ſecond, and third; and, for the greater eaſe, denote each pack, or bale, with a capital letter, intimating the ſort. If the triage, or ſeparation, is well made, in 15 bales, there will be 12 marked with R, that is, refine, or prime; 2 marked F, for fine, or ſecond; and one T for thirds. The wools moſt eſteemed are the Engliſh, chiefly thoſe about Leominſter, Cotſwold, and the iſle of Wight; the Spaniſh, principally thoſe about Segovia; and the French, about Berry; which laſt are ſaid to have this peculiar property, that they will knot or bind with any other ſort; whereas the reſt will only knot with their own kind.

Among the antients, the wools of Attica, Megara, Laodicea, Apulia, and eſpecially thoſe of Tarentum, Parma, and Altino, were moſt valued. Columella ſets the two laſt even above that of Tarentum. And Varro aſſures us, the people there uſed to clothe their ſheep with ſkins, to ſecure the wool from being damaged. De re ruſt. lib. ii. c. 2.

Tavernier affirms, that the wools in Aſia are incomparably better than thoſe of Europe; and that there is no doubt, but wool was the golden fleece ſought for at Colchis.

The art of preparing and working wool, is attributed by the antients to Minerva; who, accordingly, is made the genius and protectreſs thereof.

Engliſh WOOL. The wools of England have always been in the higheſt repute, and more abroad than at home. Some manufactured by Britiſh clothiers, Chamberlayne obſerves, vies, both for ſoftneſs and fineneſs, with the choiceſt ſilks.

Spaniſh wools bear a great price in England; but it is certain much the greateſt part of that, which, when manufactured, the Engliſh clothiers call Spaniſh cloth, grows in England. But the French can make no good cloth of their own wool, without at leaſt one-third of Engliſh or Iriſh wool mixed with it. It is allowed the goodneſs of the Spaniſh wool is owing to a few Engliſh ſheep ſent over into Spain, as a preſent, by Henry II. of England; or, as others will have it, by Edward IV. in 1465.

The fineneſs and plenty of Engliſh wools, is owing, in ſome meaſure, to the ſweet, ſhort graſs, in many paſtures and downs: though the advantage of theſe ſheep feeding on this graſs all the year, without being obliged to be ſhut up in folds during the winter, or to ſecure them from wolves at other times, contributes not a little thereto.

The Scotch and Iriſh wools are commonly ſold abroad for Engliſh, and upon the ſame footing. But foreigners ſkilled in thoſe matters, find they come far ſhort of it in fineneſs; though, in ſome markets, the Iriſh is ſaid to be preferred even to the Engliſh.

The yearly produce of wool in England is calculated, by Dr. Davenant and Mr. King, at two millions ſterling. See *Woollen* manufactory.

Antiently the principal commerce of the Engliſh nation conſiſted in wool unmanufactured; which foreigners, eſpecially the French, Dutch, and Flemiſh, bought up; inſomuch that the cuſtoms of Engliſh wool exported in the reign of Edward III. amounted, at 50 s. a ſack, to 250,000 l. *per annum*; which was an immenſe ſum in thoſe days.

This exceſſive cuſtom on the export of unmanufactured wool ſet the inhabitants of England to the making of it into cloth themſelves: in which they ſucceeded ſo well, that, towards the cloſe of the 16th century, under the reign of Queen Elizabeth, the exportation of any wool at all was abſolutely prohibited, upon pain of having the right hand ſtruck off.

From which time England has been exceedingly jealous of its wool. To prompt their vigilance, the judges, king's council at law, and maſters in chancery, in parliament, are ſeated on wool-ſacks. Accordingly, there has been ſcarce a parliament but has renewed and reinforced the prohibition; particularly, about the middle of the 17th century, the exporting of wool was made a capital crime. But all theſe precautions are ineffectual; the Engliſh themſelves, particularly about the coaſts of Suſſex, making uſe of the long winter-nights to waft over their wools to France; being ſure of carrying them to a good market; deſpiſing the penalty, with an intrepidity which all other Europeans are amazed at.

M. Colbert, a name the French manufactures and commerce are infinitely indebted to, entertained a deſign of procuring ſome Engliſh ſheep, and propagating them in France; hoping, that, by chuſing them, in the provinces of that kingdom, ſuch paſtures, and ſuch a ſky as they had in their own iſland, they might there be perpetuated, and France be no longer obliged to depend on the clandeſtine ſupplies of wool from the Britiſh owlers. But the Count de Cominges, then ambaſſador of France to the Britiſh court, laid the impoſſibility of having ſuch an export of ſheep; and the almoſt equal impoſſibility of keeping and making them multiply there, ſo ſtrongly before him, that he abandoned the deſign.

Wool is reckoned by the ſack, containing 2 weighs, the weigh 6 tods and a half, the tod 2 ſtones, the ſtone 2 cloves, the clove 7 pounds, and 2 ſacks make a laſt, or 4368 pounds. See *Laſt*, *Sack*, *Tod*, and *Clove*.

In 1740, Mr. Webber publiſhed an account of his ſcheme, "for preventing the exportation of wool." In his

his dedication to the houſe of commons, he ſays, "That "he had invented and publiſhed a ſcheme to prevent "this fatal evil, by an *univerſal regiſtry* in charter; "which his Majeſty, above nine years ago, at the requeſt "of above 60,000 woollen traders, was pleaſed to grant "to him and company. That, by the advice of the "lord high chancellor, he had been endeavouring ever "ſince to procure an act of parliament to confirm his "Majeſty's grant, and to make the ſcheme more effec-"tual, by veſting in the patentees ſuch power as the "charter would not give them; but he had not been "able to obtain one, which he imputed to the miſrepre-"ſentations of him and his ſcheme: becauſe, of him-"ſelf, it had been ſaid, that he was no better than a "madman; and of his ſcheme, that it was calculated to "monopoliſe trade, and to enſlave the nation by an ex-"ciſe."

Mr. Webber's ſcheme was, that the charter might conſiſt of 122 perſons, anſwerable to the number of counties in Great Britain and Ireland, to remain to them, their heirs and aſſigns, for ever. *But he ſhould have conſidered that there are only* 119 *counties and ſhires in Great Britain and Ireland.* That each of the perſons, in the diſtricts which may be allotted them, ſhould have power to provide proper perſons to ſerve in the regiſters thereof; which he propoſes to be done in the manner particularly mentioned in his ſcheme, conſiſting of 42 other articles.

But as this ſcheme had been miſrepreſented, the author deſired the following principles, on which it was founded, and the propoſitions offered to ſupport them, might be fully examined.

"He propoſed, that all the wool of Great Britain and Ireland ſhould be entered in a regiſtry, to be eſtabliſhed throughout theſe kingdoms, ſo ſoon as it is ſhorn; and that it ſhould be and remain charged with 5 s. *per* pound, from thenceforth, till it appears to have been manufactured among us, ſo far as that it can never be reduced into wool, worſted, or the like, again.

If it was charged with 20 s. *per* pound, it would affect no honeſt man; no money being intended to be diſburſed, or paid by any perſons, but thoſe who export it; and they cannot be puniſhed too ſeverely.

Again, he propoſed, that all perſons who have the direction of the ſaid regiſtry ſhould be under no manner of influence; and that they ſhould be rendered incapable of ever having any thing to do in it, on their accepting any place, penſion, or the like, and on their being guilty of any wilful and notorious breach of their duty."

That officers never will ſtop wool, was the opinion of the late King James, who had been himſelf a great merchant; of King William, whoſe country ſubſiſted entirely by trade; of the honourable the commiſſioners of the cuſtoms, in a report made to that prince, dated the 4th of March 1689; nay, even of the parliament themſelves; as appears by the preamble to an act made in conſequence of that report, in the 1ſt of William and Mary; in which the remiſſneſs and negligence of the officers is taken notice of to be of very bad conſequence, tending to the ruin and undoing of many of the ſubjects, and the great diminution of the trade of the kingdom; by which act letters-patents that had been granted to private perſons by King James, for preventing the exportation of wool, were revived: but the act proved ineffectual.

By acts paſſed in the 9th and 10th of William III. the owners of wool ſhorn, or lodged within 10 miles of the ſea-ſide, in the counties of Kent and Suſſex, muſt, within three days after ſheering, give an exact account in writing of the number of fleeces, and where lodged, to the officers of the next port.

The like notice muſt be given before removal, expreſſing the number of fleeces and weight, the name and abode of the buyer, and the place to which it is intended to be carried, and a certificate taken from the officer who firſt entered it, upon forfeiture, and 3 s. *per* pound.

Such certificates muſt ſpecify the names of the owners and buyers, and be limited to ſuch times and places to be removed; for which certificate the officer is to receive 6 d.

Perſons reſiding within 15 miles of the ſea, in the counties of Kent and Suſſex, may not buy wool before they have entered into a bond, with ſureties, that all the wool they buy ſhall not be ſold by them to any perſons within 15 miles of the ſea.

Wool found carrying towards the ſea-ſide in the aforeſaid counties, unleſs entered, and ſecurity be given, is forfeited, and 3 s. *per* pound weight.

If removed from the place where firſt lodged after ſheering, within 10 miles of the ſea, may not be lodged, after the firſt removal, within 15 miles of the ſea, in the aforeſaid counties, upon forfeiture thereof, if found, or of 3 s. *per* pound weight by the owners, if carried away.

If laid or hid within 15 miles of the ſea, and not entered, is forfeited.

By the 1ſt of William and Mary, wool deſigned to be carried to any place on the ſea-coaſts, with an intention to be conveyed to any other port or place on the ſea-coaſts, from whence it may be exported; muſt, before loaded, or carried within 5 miles of the place, be entered at the port from whence it is to be conveyed, mentioning the exact weight, marks, and numbers; upon forfeiture thereof, with the horſes, &c. and perſons concerned in carrying, driving, &c. are liable to the forfeiture inflicted on the exportation.

But not to hinder the conveyance of wool from the place of ſheering to the proprietor's dwelling-houſe, though within 5 miles or leſs of the ſea; provided that within 10 days after the ſheering, and before removal or diſpoſal, he certifies under his hand, to the officers of the next port, the number of fleeces, and where lodged; and does not remove or diſpoſe thereof, without certifying his intention at leaſt three days before removal; ſuch certificates being to be kept and regiſtered by the officers.

A regiſter of all wool ſent coaſtwiſe, with the particular weights and numbers, the ſhipmaſter's name, owner's name, and to whom conſigned, muſt be kept at the cuſtom-houſe, London.

By the ſtatutes of the 12th Charles II. 1ſt of William and Mary, 7th and 8th of William III. and 5th of George I. wool, woolfells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fullers earth, fulling clay, and tobacco-pipe clay; the cockets for the carriage thereof coaſtwiſe, muſt be written upon paper, and not parchment, expreſſing the exact weights, marks, and numbers, and be ſigned by at leaſt three of the chief officers; in whoſe preſence they are to be weighed.

The return or certificate of landing the wool, muſt be written on paper, not parchment; the quantity not obliterated, or interlined, and muſt expreſs the exact weights, marks, and numbers, and be ſigned by at leaſt three of the chief officers; in whoſe preſence it muſt be weighed.

Officers not performing their duties, are to be deemed aiders and abettors of the tranſportation, and to be liable to all penalties accordingly.

By the ſtatutes of the 12th and 14th of Charles II. and 7th and 8th, and 9th and 10th of William III. wool, ſheep, &c. as above, may not be exported, nor packed or loaded upon any horſe. &c. nor loaden on board any ſhip, with intent to be exported, unleſs as hereafter excepted; upon forfeiture, and 20 s. for every ſheep, and 3 s. for every pound weight of the reſt.

Owners of the ſhips, knowing thereof, are to forfeit their intereſt therein.

And if they be aliens, or natural-born ſubjects not inhabiting within this kingdom, ſuch ſhips are forfeited wholly to his Majeſty.

Maſters and mariners knowing thereof, and aſſiſting therein, are to forfeit all their goods and chattels, and to ſuffer three months impriſonment.

The exporter, beſides other penalties, is diſabled to require any debt, &c.

Owners, maſters, or mariners, diſcovering upon oath, within three months after knowledge of offence, or after their return into Great Britain, the number, quantity, and quality of the goods exported, &c. are to be diſcharged of all penalties, and to have the benefit of an informer's part.

The

The exportation of wool, ſheep, woolfells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fullers earth, fulling clay, or tobacco-pipe clay, is declared a common and public nuſance.

Such goods ſhipped, or found on the ſhore, at or near the ſea, or any navigable river, or packed or loaded on any horſe, &c. with intent to be exported, may be ſeized by any perſons: but ſuch perſons may not be evidence againſt the offender.

But the prohibition is not to extend to

Lamb-ſkins ready dreſſed and prepared for furs or linings.

Nor to wool fells or pelts, or beds ſtuffed with flocks, or wether ſheep alive, or the wool growing thereon, taken on board for the uſe and food of the ſhip and paſſengers.

Nor to the exportation of unkembed wool, out of the port of Southampton, into the following iſlands, and not exceeding the following reſpective quantities yearly:

To Jerſey	-	4000 tods, not exceeding 32 lb.
To Guernſey	-	2000
To Alderney	- -	400
To Sark	- -	200

Provided the exporter, before ſhipping, delivers to the cuſtomer, comptroller, ſurveyor, or ſearcher, a writing under the ſeals of the reſpective governors, ſignifying that the perſon therein named, is authoriſed to export the number of tods therein mentioned; and that he has given ſufficient ſecurity for the due landing.

Governors may not grant licences for any greater quantities, upon forfeiture of 20 l. *per* tod to his Majeſty.

Such wool may not be again tranſported, or attempted to be tranſported out of the ſaid iſlands, upon forfeiture, and 20 l. *per* tod.

The cuſtomer of Southampton muſt keep a true account of the quantity of the wool ſhipped, and may not permit any greater quantities than thoſe before limited; upon forfeiture of office, and 100 l.

Packs, ſacks, bags, or caſks of wool, wool-fells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fullers earth, fulling clay, or tobacco pipe clay, may not be loaded on any horſe, &c. nor carried by land within the kingdom, but in the day-time, and at ſeaſonable hours; that is to ſay, from the 1ſt of March to the 29th of September, between four in the morning and eight in the evening; and after the 29th of September to the 1ſt of March, between ſeven in the morning and five in the evening; upon forfeiture thereof, or the value.

Such goods may not be loaded upon any horſe, &c. or carried by land, within five miles of the ſea-coaſt, but between ſun-riſing and ſun-ſetting, upon forfeiture thereof, and the horſe, &c.

Such exported into parts beyond the ſeas, the penalty is forfeiture of ſhip and goods, and treble the value, with treble coſts of ſuit.

Perſons aſſiſting in the exportation, are to ſuffer three years impriſonment, without bail or mainprize.

The firſt three perſons, not being the owners, aſſiſting in the exportation, diſcovering their crime to any juſtice of the peace, are diſcharged of all penalties and puniſhments.

The inhabitants of the place out of which, or through which ſuch goods are carried or exported, are to forfeit 20 l. if they be under the value of 10 l.: but if above, treble the value, and alſo treble coſts of ſuit.

But the hundred of Winchelſea in the cinque ports, being divided by a navigable arm of the ſea, is to be deemed as two diſtinct hundreds: and the offences committed in one part, are not to be chargeable on the inhabitants of the other.

The admiralty are to appoint one ſhip of the 5th rate, and two of the 6th, and four-armed ſloops, to cruize conſtantly from off the North Foreland to the iſle of Wight; with orders for ſeizing all veſſels exporting wool, or carrying or bringing prohibited goods, or any ſuſpected perſons.

By the 10th and 11th of William III. and 5th of George II. the admiralty are to appoint three ſhips of the 6th rate, and eight or more armed ſloops, to cruize on the coaſts of Great Britain and Ireland, in ſuch ſtations as ſhall be aſſigned them by the admiralty, with orders to ſeize all veſſels in which any wool, worſted, bay or woollen yarn, cloth, ſerges, bays, kerſeys, ſays, frizes, druggets, cloth-ſerges, ſhalloons, or any other drapery, ſtuffs, or woollen manufactures whatſoever, ſhall be exported, or laden to be exported from Ireland to foreign parts. A liſt of the ſhips and ſloops, the names of the commanders, and copies of their inſtructions, are to be ſent to the commiſſioners of the cuſtoms in Great Britain, and commiſſioners of the revenue in Ireland, within 10 days after given. The commanders of ſuch ſhips may ſearch any veſſels within the limits of their ſtations; and if any of the above mentioned goods are found on board without a cocket or warrant licenſing the exportation thereof, may carry them, with crew and cargo, into any port in Great Britain or Ireland.

After ſeizure, the goods are to be ſecured in the King's warehouſe; and, when condemned, muſt, together with the veſſel, her guns, tackle, and furniture, be ſold by inch of candle, to the beſt bidder after 21 days public notice; 1-4th of the produce of ſuch ſale to the commander; 1-4th to the officers of the ſhip or ſloop; 1-4th to the mariners; and 1-4th to the King; out of which the charges of proſecution are to be paid, except the ſeizure be made upon information; in which caſe the informer is to be indemnified from all penalties, &c. for the exportation, and to be paid 1-5th of ſuch ſale, and the reſidue to be divided into four parts, and diſtributed as above.

Commanders neglecting their duties, compounding for, or conniving at the exportation of wool, are to forfeit all their pay due, to ſuffer ſix months impriſonment, and be rendered incapable of any ſervice in the navy.

By the 14th of Charles II. wool, yarn made of wool, and wool-flocks, may not be preſſed together with any ſcrews, preſſes, or any other engines, into any ſack, pack, bag, caſk, &c. nor carried nor laid at or near the ſhore or coaſts of the ſea, or any navigable river, or into any place adjoining, with intent to be exported; upon forfeiture thereof, or the value.

Spaniſh or foreign wool may be exported only in Britiſh ſhipping, upon pain of confiſcation.

By the 1ſt of William and Mary, and 7th and 8th of William, &c. wool, wool-fells, mortlings, ſhortlings, wool-flocks, worſted, bay or woollen yarn, cloth, ſerges, bays, kerſies, ſays, frizes, druggets, ſhalloons, ſtuffs, cloth-ſerges, or any other drapery made of or mixed with wool, or wool-flocks, and manufactured in Ireland, may not be exported out of Ireland, unleſs they be ſhipped in the ports of Cork, Drogheda, Dublin, Dundalk, Galway, Kinſale, Limerick, New Roſs, Newry, Sligo, Waterford, Wexford, Wicklow, and Youghall, in Ireland, and with intent to be imported into the ports of Barnſtaple, Biddiford, Bridgewater, Briſtol, Cheſter, Liverpool, Milford haven, and Minehead, in England and Wales; and ſo as notice be firſt given to the commiſſioners of the cuſtoms, or to the cuſtomer or collector of the port into which they are intended to be brought, of the quantity, quality, and package; with the marks and numbers, the name of the ſhip and maſter, and the port of importation; and bond be entered into with one or more ſufficient ſureties, in treble the value of the goods, that they ſhall be landed accordingly; and a licence be alſo granted under the hands of the commiſſioners, or any three of them, or by the cuſtomer or the collector of the port where bond is given; upon forfeiture of ſhip, goods, and 500 l. by every offender.

Maſters, mariners, or others, knowing of ſuch offence, and aſſiſting therein, are to forfeit 40 l.

By the 10th and 11th of William III. wool, wool-fells, mortlings, ſhortlings, wool-flocks, worſted, bay or woollen yarn, cloth, ſerges, bays, kerſies, ſays, frizes, druggets, ſhalloons, ſtuffs, cloth-ſerges, or any other drapery made of or mixed with wool, or wool-flocks; for every ſhip ſailing from Ireland to Great Britain, with any of the aforeſaid goods, bond muſt be given before ſhipping, to the chief officers of the port, by two ſufficient perſons, in double the value of the goods, that they ſhall be all brought to Great Britain, and there landed, and the duties paid; upon forfeiture of the ſhip:

The penalties and forfeitures of ſuch bonds, may not be granted or aſſigned over to any perſon.

The cockets or warrants for carrying of ſuch goods from Ireland to Great Britain, muſt be written upon paper, and not parchment, and ſigned by at leaſt three of the chief officers; with the exact quantities, qualities, marks, and numbers, endorſed thereon.

The like endorſement muſt be upon the warrant for the landing the ſame in England; and the goods muſt be viewed and examined by the ſurveyor or land-waiter.

The certificates of landing, granted for diſcharging the bond taken in Ireland, muſt be written on paper, and not parchment, ſigned by at leaſt three of the chief officers; with the exact quantities, qualities, marks, and numbers, endorſed thereon, and not obliterated or interlined.

A regiſter of all ſuch goods, with the particular quantities, qualities, weights, and numbers, the ſhip, maſter's name, owner's name, and to whom conſigned, muſt be kept at the cuſtomhouſe, London.

The commiſſioners of the cuſtoms in Ireland muſt, every ſix months, or within 30 days after, tranſmit to the commiſſioners of the cuſtoms in England, duplicates of the bonds taken for the lading; and a true account of all ſuch goods exported, expreſſing the quantity, quality, and weight, by whom, and in what ſhip exported, where conſigned, the names of the officers certifying the landing in England, the dates of their certificates, where landed, and the quantity, quality, weight, marks, and numbers, contained in ſuch certificates.

By the 12th of George II. wool, wool-fells, mortlings, ſhortlings, wool-flocks, worſted, bay or woollen yarn, cloth, ſerges, bays, kerſies, ſays, frizes, druggets, ſhalloons, ſtuffs, cloth, ſerges, or any other drapery made of or mixed with wool, or wool-flocks, may not be put on board any veſſel or boat in Ireland, or imported from thence into Great Britain, but ſuch as are of the built of Great Britain or Ireland, and wholly owned and manned by the ſubjects of Great Britain or Ireland, and regiſtered; on forfeiture of the goods or value thereof, as alſo of the veſſel or boat, with her guns, tackle, apparel, and furniture.

Wool, wool-fells, mortlings, ſhortlings, wool flocks, worſted, bay or woollen yarn, may not be packed up in Great Britain or Ireland, in any other package but packs or truſſes of leather, or pack-cloth, and marked on the outſide with the reſpective words WOOL or YARN in large letters, not leſs than three inches in length; on forfeiture of the goods and package, and 3 s. for every pound weight, to be paid by the owner or packer of it.

Coverlids, waldings, or other manufactures of wool ſlightly worked, or put together ſo as they may be reduced to or made uſe of as wool again, or mattraſſes or beds ſtuffed with combed wool, or wool fit for combing, may not be exported from Great Britain or Ireland; under the like penalties and forfeitures as for being concerned in the exportation of wool.

Wool, wool-fells, mortlings, ſhortlings, combed wool, woollen or bay yarn, worſted yarn, cruels or wool ſlightly manufactured, may not be laden on any veſſel bound to parts beyond the ſeas; nor laden in order to be carried coaſtwiſe, from one port of Great Britain or Ireland to another; unleſs notice be firſt given to the commiſſioners of the cuſtoms, or to the cuſtomer or collector and comptroller of the port, from which they are intended to be ſent or exported, of the quantity, quality, and package, with the marks and numbers, the ſhip and maſter's name, the name and place of abode of the owner of the goods, and the port into which they are intended to be imported, and to whom conſigned; and bond be entered into, in treble the value of the goods, that they ſhall be landed accordingly, notice whereof to be tranſmitted from the cuſtomer or collector of the port from whence the ſame is intended to be exported, to the cuſtomer or collector and comptroller of the port into which the ſame is intended to be imported; and unleſs a licence be taken out under the hands of three of the commiſſioners of the cuſtoms, or from the cuſtomer or collector and comptroller, where ſuch bond is given for landing and carrying thereof as aforeſaid; on forfeiture of the goods, together with the veſſel or boat and furniture on which they are laden: the licence to be granted without any charge to the perſon demanding it.

The ſaid bond not to be diſcharged, but by a certificate under the hand and ſeal of the cuſtomer, or collector and comptroller of the port where they are landed, of the quality, quantity, and package, the marks and numbers, with the name of the ſhip and maſter. And bonds not ſo diſcharged after ſix months, are to be tranſmitted to the commiſſioners of the cuſtoms in Great Britain, or to the commiſſioners of the revenue in Ireland, who are to put them in ſuit immediately.

No other ſecurity now required by law, for goods carried coaſtwiſe, to be hereby leſſened; or law in force for preventing the exportation of wool, or other goods aforeſaid, to be repealed or made void hereby.

None of the goods before mentioned may be ſhipped or landed but in the preſence of the proper officers, and at the lawful keys, without leave from the commiſſioners and officers of the cuſtoms, on forfeiture of the goods or value thereof, and 3 s. for every pound weight; to be paid by the proprietor of the goods, or any perſon concerned in the ſhipping or landing thereof.

Informations of ſeizure of any of the ſaid goods, as forfeited by this or any other act, are to be entered by none but officers of the cuſtoms, exciſe, or ſalt duties; and informations againſt any perſons, for recovery of the penalties and forfeitures on account of the illegal tranſportation of the ſaid goods, to be filed, and proſecuted only in the name of the Attorney-general, or in the name of ſome officers of the cuſtoms, exciſe, or ſalt-duties.

Any officer making a colluſive ſeizure or information of the ſaid goods, or any fraudulent agreement, whereby the perſons concerned may avoid the penalties and forfeitures incurred, forfeits 200 l. and is incapable of ſerving in any office of the revenue; and the exporters, importers, and owners of the goods forfeit treble the value, to the uſe of the perſon who informs or ſues for the ſame.

If any perſon, who may become liable to the payment of the 3 s. *per* pound weight, by this or any former acts, is not able to pay it, the reſpective commiſſioners may cauſe 1 s. *per* pound weight of the goods, for which the offender is convicted, to be paid to the informer or proſecutor by their receiver-general, out of any public money in his hands.

Any maſter, mate, or mariners belonging to any ſhip concerned in the illegal exportation or importation of the goods aforeſaid, from Great Britain or Ireland, giving an account within ſix months after the ſhipping the ſame, to the commiſſioners of the cuſtoms in England or Scotland, or the commiſſioners of the revenues in Ireland, of the name of the ſhip, the ſpecies and quantities of the goods, the name of the owner, exporter, or perſons who act in their aid and aſſiſtance, ſo as they may be convicted, is to be indemnified, diſcharged of all penalties and forfeitures, and receive three-fourths of what is recovered, clear of all charges; the other one-fourth to be applied to the uſe of his Majeſty, after deducting the charge of proſecution and condemnation.

Every perſon appointed by deputacion, commiſſion, or other inſtrument under the hands and ſeals of the commiſſioners of the cuſtoms, exciſe, or ſalt, to act as an officer or ſervant under them, in putting this or any act, againſt the tranſportation of wool in execution; is to be eſteemed an officer of the cuſtoms, exciſe, or ſalt, reſpectively.

Offering to bribe an officer to connive at the ſaid illegal practices, the penalty is 300 l.

Perſons obſtructing officers, or their aſſiſtants, in making ſeizures, by virtue of this act; or who being armed or diſguiſed, attempt to refcue any of the aforeſaid goods after ſeizure, are to be tranſported for ſeven years.

Wools, wool-fells, wool-flocks, mortlings, ſhortlings, cruels, worſted, woollen and bay yarn, mattraſſes, and beds ſtuffed with combed wool, or wool fit for combing, exported from Great Britain or Ireland; and woollen manufactures exported from Ireland, inſured to parts beyond the ſeas; the perſon inſuring, his aiders, abbettors, and aſſiſtants, forfeit 500 l. over and above all other forfeitures

feitures and penalties they are liable to; and the perſon inſured forfeits 500 l. to the uſe of the informer, or perſon who ſues for the ſame.

By the 6th of Queen Anne broad cloths white exported, or ſhipped for exportation, before payment of the duty, are forfeited, or their value.

And white woollen cloths made in Great Britain, may be exported by any perſon, notwithſtanding the 14th and 15th Hen. VIII. cap. 3. or any other act.

By the 1ſt of Will. and Mary, cloths, ſtuffs, ſtockings, or other manufactures of wool made in Great Britain, may be bought and exported by any perſons without moleſtation.

By the 11th and 12th of Will. III. Britiſh woollen manufactures, as cloths, kerſies, bays, ſerges, cottons, ſtuffs, ſtockings, hats, caps, or any other manufactures made of, or mixed with ſheep or coney wool, may be exported duty free; though, by the 8th of Hen. VI. thrumbs, or woollen yarn may not be exported, upon forfeiture of double the value.

By the 3d of Edward IV. the 2d of Will. and Mary, and 6th and 7th of Will. III. woollen-caps, woollen cloths, laces, corſes, ribbons, fringes of ſilk and of thread, ſilk twined, ſilk embroidered, laces of thread, of gold, of ſilk or gold, ſaddles, ſtirrops or harneſs pertaining to ſaddles, ſpurs, boſſes for bridles, andirons, gridirons, any manner of locks, hammers, pinſons, fire-tongs, dripping-pans, dice, tennis balls, points, purſes, gloves, girdles, harneſs for girdles of iron, latten, ſteel, tin or of alkmine, any thing wrought of any tawed leather, tawed furs, buſkins, ſhoes, goloches or corks, knives, daggers, wood knives, bodkins, ſheers for taylors, ſciſſors, razors, cheſſmen, playing cards, combs, pattens, pack-needles, painted wares, except pictures, forcers, caſkets, rings of copper, or of latten gilt, chafing-diſhes, hanging candleſticks, chafing-balls, ſacring bells, rings for curtains, ladles, ſcummers, counterfeit baſons, ewers, hats, bruſhes, cards for wool, may not be imported by any perſons, to be uttered or ſold in Great Britain, upon forfeiture thereof: except made or wrought in Ireland, or taken upon the ſeas without fraud or colluſion, or wrecked.

By the ſtatute of the 12th of Geo. II. for taking off the duties of woollen and bay yarn imported from Ireland to England, and for the more effectual preventing the exportation of wool from Great Britain, and of wool and wool manufactured, from Ireland to foreign parts, it was enacted, that the ſeveral ſubſidies then payable to his Majeſty upon woollen and bay yarn, imported from Ireland ſhould ceaſe, and be no longer paid: provided nothing in this act ſhould extend to take off the duties upon worſted yarn, being of two or more threads twiſted or thrown, or cruel, imported into Great Britain from Ireland.

That all woollen or bay yarn, wooll-fels, ſhortlings, mortlings, woolflocks, worſted, yarn, cloth, ſerge, bays, kerſies, ſays, frizes, druggets, cloth-ſerges, ſhalloons, ſtuffs, and other draperies, and woollen manufactures, or mixed with wool or woollen flocks, which ſhould be exported from Ireland, into the ports of Great Britain hereafter mentioned, ſhould be ſhipped off, and entered at the ports of Dublin, Waterford, Kinſale, Youghall, Cork, Drogheda, New-Roſs, Newry, Wexford, Wicklow, Sligoe, Limerick, Galway, and Dundalk, in the ſaid kingdom of Ireland, and from no other part or place; nor ſhould the ſame be imported into any parts of Great Britain, other than the ports of Biddeford, Barnſtaple, Minehead, Bridgewater, Briſtol, Milford-haven, Cheſter, and Liverpoole, in the ſame manner as if the ſaid ports of Newry, Wexford, Wicklow, Sligoe, Limerick, Galway, and Dundalk, had been particularly named for exportation of the ſaid goods, in the act of the 10th and 11th of Will. III. entituled An act to prevent the exportation of wool out of the kingdoms of Ireland and England, and for other purpoſes therein mentioned.

That no wool, or any of the ſaid goods ſhould be loaden on board any ſhip or boat in Ireland, or imported from thence into Great Britain, but in ſuch veſſels or boats, as ſhould be of the built of Great Britain or Ireland, and wholly owned and manned by the ſubjects of Great Britain or Ireland, and duly regiſtered, under the penalty of forfeiture of the ſaid goods, or the value thereof, and of the veſſel or boat in which the ſame ſhould be laden, together with her ammunition and furniture.

That no ſhip or veſſel ſhould paſs as a ſhip of the built of Great Britain, or Ireland, ſo as to be qualified to take on board in any of the ports of Ireland appointed for that purpoſe, any wool, or other the ſpecies aforementioned, in order to import the ſame into the ports of Great Britain, in this act appointed for that purpoſe, until the perſons claiming property in the ſaid ſhip ſhould regiſter the ſame.

That all policies of inſurance on goods loaden on any veſſel, bound from Great Britain to Ireland to foreign parts, which ſhould afterwards appear to be wool, or woollen yarn, or other ſpecies of wool beforementioned, or woollen manufactures from Ireland; and all policies of inſurance on any veſſel bound from Great Britain to foreign parts, which ſhould have on board any of the ſaid goods, ſhould be void, notwithſtanding any words or agreement whatſoever, which ſhould be inſerted in any ſuch policy of inſurance; and nothing ſhould be recovered by the aſſured in either caſe, from the inſurer for damage, or for the premium given as the conſideration for inſuring ſuch goods or veſſel.

But, by a late act, all the ports of Great Britain were made open for the importation of wool, and woollen or bay yarn, from any part of Ireland, after the 5th of June 1753; under the ſame reſtrictions as in the ſtatute of the 12th of Geo. II.

It muſt be a work of great difficulty to prevent the running of wool from Ireland to France. Ireland may produce yearly about 480,000 ſtones of wool, of 16 lb. each: the medium price of theſe wools is about 12 s. the ſtone; ſo that the whole amounts to 288,000 l. But if 10 l. value in wools, when completely manufactured for ſale, is worth 50 l. the value of the yearly wools of Ireland, worked up, muſt be 1,440,000 l. ſo that the earned money of the poor of that country, in working up the yearly produce of wool, would amount to 1,152,000 l. and the number of poor that might be ſubſiſted by ſuch a manufacture would be 144,000 people.

But Ireland is crampt in her woollen manufactures by the laws of Great Britain; whereby the Iriſh are employed in little elſe than the manufacturing of Spaniſh cloths, in which they may conſume 570 bags of wool, employ only 4560 perſons, and earn no more than 45600 l. yearly. Upon this account the Iriſh people ſell their own unmanufactured wools to France; which has ſo much alarmed the manufacturers and landed gentlemen of England, that they have endeavoured to make the moſt effectual laws to prevent the exportation of wools from that country. But in vain; the wools of France are ſhort and coarſe: they are not ſo fine in the thread, or ſo long in the ſtaple as thoſe of Ireland; therefore they are obliged to get the wools of Ireland; for which they can afford to pay an extraordinary price; becauſe, by the help of one pack of Iriſh wools, France can manufacture two of her own, without which they are uſeleſs to her for foreign markets; notwithſtanding the wool ſhe procures from Germany, Portugal, Barbary and Turky.

There were imported from Ireland to Great Britain, from Lady-day 1743 to Lady-day 1744,

In raw wools, great ſtones - - -	19,993
In worſted yarn - - -	68,622
In woollen yarn - - -	15,224
Stones	103,839

There is paid for a licence, together with fees, to the Lord Lieutenant of Ireland, about 23 l. ſterling for every thouſand great ſtones of wool exported to England. But France will ſtill clandeſtinely get Iriſh wools: nor can Great Britain prevent the French from ſupplying foreign countries with their Spaniſh cloths; for, by their ſituation, they will always have the Spaniſh wools cheaper than other nations; and the low price of labour, with the cheapneſs of proviſions in thoſe provinces of France where Spaniſh cloths are manufactured, will ever enable them to vie with, if not underſel Great Britain in that manufacture. See *Ireland*.

WOOL *drivers*, are thoſe who buy wool of the ſheep owners in the country, and carry it on horſeback to the clothiers, or market towns to ſell it again.

WOOLLEN-*manufactory*, includes the ſeveral ſorts of commodities into which wool is wrought; as broad cloths, long and ſhort kerſeys, bays, ſerges, flannel, perpetuanas, ſays, ſtuffs, frize, ſhags, penniſtons, ſtockings, caps, blankets, rugs, and the like. Each of which ſee under its reſpective article.

The woollen-manufactory, which now makes the principal article both in the foreign and domeſtic trade of Great Britain, being that which furniſhes the cargoes of its veſſels, and employs its people, may be ſaid to have had its riſe in the 15th century. Till that time Engliſh wool was all ſold in the fleece, to ſuch of their neighbours as came to fetch it. Among theſe cuſtomers, however, the principal were the Flemings and Brabanters, particularly the merchants of Ghent and Louvain; who took off vaſt quantities to ſupply two manufactories that had flouriſhed in thoſe two cities from the 10th century; which had furniſhed the greateſt part of Europe, and even England itſelf, with all ſorts of woollen cloths. But the richneſs of the manufactories of Ghent, and the incredible number of hands employed therein, having ſpirited up the inhabitants to revolt ſeveral times againſt their ſovereigns, on acconnt of certain taxes which they refuſed to pay; the ſeditious were at length puniſhed, and diſperſed, part of them taking refuge in Holland, and the reſt in Louvain.

Theſe laſt, together with all their art of manufacturing cloths, carried with them their ſpirit of ſedition; and it was not long before ſeveral of them, to avoid the puniſhment they had deſerved for killing ſome of the magiſtrates, removed into England, where they inſtructed the Engliſh to work their own wools.

This eſtabliſhment is referred to the year 1420; from which time no endeavours have been ſpared to keep the wools in England.

The preſident Thuanus makes this epocha 100 years later, and attributes the eſtabliſhment of the woollen manufactories in England to Q. Eliz. and the troubles about religion, which with the ſeverity of the duke of Alva, and the Spaniſh inquiſition, had occaſioned, and kept up ſo long the troubles in the Low Countries. But what that noble author ſays, is rather to be underſtood of their perfection, than their firſt eſtabliſhment; and of the ſeveral great manufactures then ſet up, at Norwich, Colcheſter, Hampton, and elſewhere: for in the Engliſh and Flemiſh hiſtorians, mention is made of the manufactures of London long before any part of the 17 provinces attempted to throw off the Spaniſh yoke.

As this manufacture now ſtands, Dr. Davenant and Mr. King, compute the produce thereof to amount to eight millions *per annum*; three fourths whereof are conſumed at home, and the reſt exported.

So jealous are the Engliſh now become of their woollens, that, beſides the precautions taken to uſe all their own wools themſelves, they have added that of ſelling them themſelves, and of carrying them to the places where they are required; not admitting ſtrangers to come and buy any in England: from whence aroſe the eſtabliſhment of thoſe famous magazines in Holland, the Levant, and the North, where Engliſh woollens are repoſited, to be vended by factors or commiſſioners. The magazine in Holland has changed place ſeveral times; having been ſucceſſively at Middleburgh, Delft, Rotterdam, and Dort, where it now remains; and where all the Germans come to furniſh themſelves. That for the Levant is at Smyrna; and that for the North at Archangel.

A pack, or 240 pounds weight of ſhort wool, it is computed employs 63 perſons a week to manufacture it into cloth. Three men to ſort, dry, mix, and make it ready for the ſtock-carder; five to ſcrible or ſtock-card it; 35 women and girls to card and ſpin it; eight men to weave it; four men and boys to ſpool it, and reed quills; eight men and boys to ſcour, burl, mill, or full it, row, ſheer, pack, and preſs it. A pack of large, long combing wool, made into ſtuffs, ſerges, ſagathies, or the like, for the Spaniſh trade, will employ for one week 202 perſons, whoſe wages amount to 43 l. 10 s. thus, 7 combers, 3 l. 10 s. dyers 5 l. 150 ſpinners, 18 l. 20 throwers and doublers, 5 l. 23 weavers and attendants, 12 l. A pack of wool, made into ſtockings, will employ for one week, 184 perſons, who will earn 56 l. thus; 10 combers 5 l. 5 s. the dyers 1 l. 6 s. 102 ſpinners 15 l. 12 s. doubles and throwers 4 l. 10 s. 60 ſtocking weavers 30 l.

Sir Walter Raleigh, who was an excellent judge of trade, gave his thoughts to King James, on the woollen manufacture, in the following manner.

May it pleaſe your moſt excellent Majeſty,

" There have been about 80,000 undreſſed and undyed " cloths yearly tranſported. It is therefore evident that " the kingdom hath been deprived of about 4,000,000 l. " within theſe 55 years; which is near twenty millions " that would have been gained by the labour of poor " workmen in that time, with the merchants gains for " bringing in dying ſtuffs, and return of cloths dreſſed " and dyed, with other benefits to the realm, beſides " exceeding enlarging of traffic, and increaſe of ſhips and " mariners.

" There would have been gained in that time three millions by increaſe of cuſtom upon commodities returned " for cloths dreſſed and dyed, and for dying ſtuffs, which " would have been more plentifully brought and uſed for " the ſame.

" There hath been alſo tranſported in that time yearly, " by bays, northern and Devonſhire kerſies, white, about " 50,000 cloths, counting three kerſies to a cloth, whereby hath been loſt above five millions by theſe ſort of " cloths within that time, which would have come to " poor workmen for their labour, with the cuſtoms for " dying ſtuffs for people's profit for bringing them in, " with returns of other commodities and freights for " ſhipping.

" Bays are tranſported white into Amſterdam, and there " being dreſſed and dyed are ſhipped into Spain, Portugal, and other kingdoms, where they are ſold in the " name of Flemiſh bays, ſetting their own town ſeal upon " them; ſo that we loſe the very name of our homebred " commodities, and other countries get the reputation " and profit of them. Lamentable is it that this land " ſhould be deprived of ſo many above mentioned millions, and that our native commodities of cloth, ordained by God for the natural ſubjects, being ſo royal " and rich itſelf, ſhould be driven to ſo ſmall advantage " of reputation and profit to your Majeſty and people, " and ſo much improved and intercepted by ſtrangers, " conſidering that God hath enabled and given your " Majeſty power to advance dreſſing and dying, and " tranſporting of all your cloths within a year or two. " I ſpeak it knowingly, to ſhew how it may be done " laudably, lawfully, and approved to be honourable, " feaſible, and profitable.

" All the companies of your land tranſport their cloths " dreſſed and dyed to the good of your kingdom, except " the merchant-adventurers, whereby the Eaſtland and " Turkey merchants, with other companies, do increaſe " your Majeſty's cuſtoms, by bringing in and ſpending " dying ſtuffs, and ſetting your people on work by dreſſing before they tranſport them; and they might increaſe far more cuſtom to your Majeſty, and make " more profit to themſelves and this realm, and ſet many " thouſands of poor people more on work for dreſſing " and dying, and likewiſe employ more ſhips and mariners, for bringing in dying ſtuffs, were it not for the " merchant adventurers, who tranſport their cloths white, " rough, and undreſſed, and undyed, into the Low " Countries, where they ſell them to the ſtrangers, who " afterwards dreſs, dye, and ſtretch them to ſuch unreaſonable lengths, contrary to our law, that they prevent " and foreſtall our markets, and croſs the juſt prohibitions of our ſtate and realm, by their agents and factors lying in divers places with our own cloths, to the " great decay of this kingdom in general, and diſcredit " of our cloths in particular.

" If this account were truly known, it would be found " that

" that they make not clear profit only by cloth tranſ-
" ported rough, undreſſed and undyed, ſixty thouſand
" pounds a year; but it is moſt apparent, your Majeſty
" in your cuſtoms, your merchants in their ſales and
" prices, your ſubjects in their labour for lack of dreſ-
" ſing and dying, your ſhips and mariners in not bring-
" ing in of dying ſtuffs and ſpending of allom, are hind-
" red yearly near a million of pounds; ſo that trade is
" driven to the hindrance of your Majeſty and people,
" by permitting your native commodities to paſs rough,
" undreſſed and undyed, by the merchant adventurers."

To this account given by Sir Walter Raleigh, may be ſubjoined the following calculation of the manufacturing of two pounds of wool, publiſhed in 1706 by Mr. Haynes.

" To form an eſtimate of the loſs accruing to the poor
" by the exportation of wool, it will be of uſe to compute
" the charges of combing, carding, ſpinning, knitting,
" dying, and preſſing two pounds or leſs of our fineſt
" combed wool, with ſome other incident charges;
" for theſe charges going out of the pocket of the under-
" taker, come into the pocket of the poor which he
" employs; and the exportation of the wool without
" this manufacture is ſo much neat loſs to the poor, and
" indeed to the whole nation.

	l.	s.	d.
" The combing oil and ſoap of 2 lb. and leſs of wool - - -	0	3	0
" This will produce 20 ounces, the ſpinning of which will coſt - - -	0	6	0
" Doubling and throwing - -	0	1	3
" The worſted thus made will make five pair of hoſe, worth 1 s. *per* pair knitting	0	5	0
" The dying the hoſe into ſcarlet -	0	6	0
" Trimming and preſſing - - -	0	1	0
" The niles combed out of this wool will be twelve ounces, which is fit to make fine druggets or milled ſtockings worth 8 d. *per* pound - -	0	0	6
" The carding and ſpinning of that into yarn	0	0	9
" Doubling and throwing it -	0	0	2
" Knitting this into a pair of hoſe - -	0	0	10
" Milling and ſhearing theſe hoſe -	0	1	0
" Dying them into a crimſon or ſcarlet colour	0	1	6
	1	7	0

" Not to reckon the profits of the wool-comber, ſtock-
" ing-ſeller, and other trades."

This ſame author ſays, that he had a certain account at that time that there were 40,000 packs of wool ſmuggled to France yearly, of which he complains very much: but, in 1715, when he writ another treatiſe, he ſays, the woollen manufactures were increaſed ſo much in France within three years, that at Amiens only the looms employed therein were increaſed in that time from 200 to 7000. How much they have increaſed ſince all over France, may be judged from the great decay of thoſe manufactures in Great Britain, and the exorbitant height of wealth and power to which France is arrived.

Sir Francis Brewſter, ſpeaking of wool and woollen manufactures, calls them, " The great ſtaple of the king-
" dom, and in truth of the world; which, by divine
" providence is ſo put into our hands, as that, without a
" turn in nature, we cannot totally loſe it; yet all that
" is poſſible for an unthinking people, as we are called
" abroad, to do, we have done, to the prejudice of thoſe
" commodities, by which means we have transferred
" great part of our woollen manufactures to other
" countries."

And, from another paſſage, concerning a project for the preventing the exportation of unmanufactured wool, we ſee his opinion of the importance of it to the nation.

" I have ſeen, ſays he, a propoſal of a gentleman that
" hath been a great dealer in this commodity to foreign
" parts, which, he affirms, would be infallible to pre-
" vent ſuch exports of wool; but he reſerves part of the
" ſecret. I would have perſuaded him to offer it to the
" houſe, but he expects a great gratification, which he
" thinks, at this time will not be given; tho' I am of
" another mind, and believe he deſerves more than he
" can aſk, if his project takes. I know a great miniſter,
" who once diſputed on that with warmth, againſt a
" care for wool, and that it was a burthen to the nation:
" it may not be foreign to this diſcourſe to give the
" heads of the diſpute, which I the rather do, that ſo it
" may ſhew the need there is for the great council of the
" nation to take it under their conſideration.
" The diſcourſe roſe on a propoſition that was brought
" to him, for ſtopping a vaſt quantity of wool that was
" then going to France; it was brought him in writing,
" and demonſtrated, that that very wool was enough to
" work up all the coarſe wool of France for ſeven years;
" and that the conſequence would be the loſs of great
" part of our manufactories to Spain and Portugal.
" The miniſter made little return to that, but brought
" his diſcourſe to the great loſs it was to men of eſtates,
" that there was not a way for ſelling twice the wool
" that now they did; that there was three years wool
" then in England, and what ſhould men do upon this
" topick of the want of a conſumption for the wool of
" England? The gentleman laid down theſe poſitions.
" Firſt, that the war was one reaſon of the decay of the
" woollen manufactories.
" Secondly, that the extraordinary eſcapes of wool to
" foreign parts, put foreigners upon making more wool-
" len manufactories than ever they did before, and that
" abated our trade abroad.
" Thirdly, that our wool going to foreign parts made
" it ſo cheap at home: this, I remember, put the mi-
" niſter into a laughter; and laying the two firſt aſide,
" he deſired him to make out the laſt poſition, that the
" eſcapes of wool to foreign parts made the wool fall in
" price; that the ſending ſo great quantities of wool out
" of the kingdom ſhould fall the price of that which was
" left, was a myſtery he could not underſtand, but
" ſeemed to him the only way to make it riſe: but the
" gentleman undertook to make out his aſſertion, that
" every pound of Engliſh wool worked up three pounds
" of foreign wool; and that as much as they manu-
" factured, ſo much was abated in our exports; for that
" they made ſuch manufactories with our wool, as they
" could not make without it; and conſequently by that
" means one pound of our wool with theirs, made four
" times as much cloths and ſtuffs as we could have made
" with it, if we had kept it at home: from which he
" inferred, that if one fourth of the wool of England
" went to foreign parts, there would be as much manu-
" factories made abroad for foreign markets, as we could
" make, if we had wrought all our own wool; and ſo
" much being made abroad, we could not have uſe for
" half our own wool that was left: this he affirmed was
" the reaſon that there lay ſo much wool unwrought in
" England; and he having brought for proof of what he
" ſaid, that which was matter of fact I thought undeniable,
" though it would not be allowed ſo by the miniſter: the
" thing was this, the year after the reſtoration, there was
" a gentleman that got a grant from the king, with a *non*
" *obſtante* to any ſtatute, for liberty to export a certain
" quantity of wool to foreign parts from Ireland; upon
" which ſome merchants in London buying the grant, ſent
" over to Ireland and bought moſt of the wool, and ſent it
" to foreign parts; this at firſt raiſed the price of wool
" both there and in England; but in ſo ſhort a time as five
" months it fell fifty *per cent.* And tho' not one fourth
" of what formerly came from Ireland into England,
" came then to England, yet there was no vent for the
" wool of England; and in Ireland it fell from 7 s. to
" 3 s. 6 d. their ſtone of ſixteen pounds, all the time
" they ſhipped it for foreign parts. This he affirmed
" he could prove by the merchants books that were
" concerned, to be literally true; and that the year
" after the ſhipping for foreign parts was over, that
" wool roſe to its former price both here and in Ireland.
" And he farther added, that the great quantities which
" by ſtealth go from England and Ireland, makes wool
" in both kingdoms fall in price, according to the quan-
" tities that are ſent out; and that if there went no wool
" from England or Ireland to foreign parts, all the wool

" of both kingdoms would not be half enough to ſupply " the manufactories that England would have markets " for abroad; for that there is now made twice as much " manufactories with the help of our wool abroad, as is " made in England; ſo that if there were an effectual " ſtop upon the wool of both kingdoms, the flocks of " both might be trebled, and yet not be ſufficient for " the manufactories England might vent. This in few " words was the beſt account I ever heard of the nature " and improvement of the wool of theſe kingdoms, and " is ſuch demonſtration of the miſchief the exports of " wool doth to the nation, that I cannot but think him " a worſe enemy to his country than a common pyrate; " for that he robs but a ſmall number, but he that ſends " out wool deſtroys thouſands, weakens the ſtrength of " the nation both at land and ſea; and if we believe the " Lord Coke's aſſertion, that nine parts of the trade of " England comes fromm the ſheeps back, there cannot " be enough done to ſecure it; but it hath ever been the " misfortune of our nation neither to puniſh or reward. " Impunity in the firſt makes us abound in criminals; " and the neglect in the latter makes us barren of great " actions for our country; I mean, in that which makes " a nation rich and wiſe: our anceſtors ſhewed more of " their good will to it in the dark of trade and naviga- " tion, than we do at noon-day. I have often thought " that it was poſſible for a monarch of theſe kingdoms to " make all Europe tributaries to him in trade, by a true " management of the natural and artificial product and " navigation of theſe kingdoms, without being obliged " to any help but what ariſeth from his own dominions, " of which wool is the chief.

" The danger that hath been impendent over us for " more than thirty years in this of our trade, is from the " French; and in truth no nation can ſo well conteſt it " with England as they can; and therefore it ſeems rea- " ſonable to conſider them in this, as much as we do in " that of their arms; and perhaps they may be found " laying a foundation in war, to inlarge their trade and " navigation, while we at the ſame time are declining in " both; and that theſe kingdoms cannot be ſafe under " the growth of France, none will deny."

The very judicious Monſieur Voltaire, in his Antimachiavel, has the following obſervation:

" As the nature of countries is very different, ſo there " are ſome whoſe riches and ſtrength depend upon " agriculture, others upon vineyards, ſome upon manu- " factures, and others upon commerce; and in ſome " few countries we ſee all theſe arts flouriſh together. " Princes therefore who chuſe this mild way of increaſing " their power, will be obliged to ſtudy the particular " nature of their country; in order to know which of " thoſe arts is moſt likely to thrive in it, and conſequently " which of them they ought moſt to encourage. The " French and Spaniards have at length perceived their " want of trade, and therefore have contrived to ruin " the trade of the Engliſh: if they ſucceed France will " increaſe its power, more conſiderable by this means " than by the conqueſt of twenty towns, and a thouſand " villages; and England and Holland, the two fineſt " and richeſt countries in the world, will dwindle away " by degrees, like a man who is dying of a conſumption."

By an act of the 12th of Charles II. there was a ſubſidy of 3 s. 4 d. by Britiſh, and 6 s. 8 d. by ſtrangers, laid upon every ſhort woollen cloth, called broad cloths exported, containing in length not above 28 yards, and in weight not above 64 lb. white or coloured; and ſo in proportion for every cloth of greater length and weight: and for all other ſorts of leſſer cloths, ſo many pieces were to be accounted to the ſhort cloth, as following:

Dorſet and Somerſet dozens, rudge waſhed Cardinals Pin whites Straits Statutes Stockbridges Taviſtocks	Seven to be accounted for a ſhort cloth.

Tauntons Bridgewaters Dunſters Devon dozens, containing 12 or 13 yards, in weight 13 lb.	Five.
Ordinary Peniſtones, or foreſt whites, containing between 12 and 13 yards, and in weight 28 lb. Sorting Peniſtones, containing 13 or 14 yards, and in weight 35 lb. unfrized.	Four.
Narrow Yorkſhire kerſies, white and red, containing not above 17 or 18 yards, and in weight 22 lb. Hampſhire ordinary kerſies Newberry whites, and other kerſies of like making, containing 24 yards, and in weight 28 lb. Sorting Hampſhire kerſies, containing 28 yards, and in weight 32 lb	Three.
Northern dozens, ſingle, ſorting Peniſtones, containing between 14 and 15 yards, and in weight 53 lb. frized	Two.
Northern dozens double	One.
Spaniſh cloth, or narrow liſt, weſtern broad cloth, not exceeding 25 yards in length, and 43 lb. in weight Cloth raſhes, or cloth ſerges, containing 30 yards, weighing 40 lb.	Two-3ds.

But, by the 11th and 12th of Will. III. the ſubſidy of woollen cloths was repealed, and they may all be exported free, except white woollen broad cloths, which, by the 6th of Queen Anne, are to pay 5 s. the piece duty. All goods exported out of the port of London, by aliens or denizens, are to pay the duty of ſcavage, &c. See *Scavage*.

Lewis XIV. cauſed great part of his kingdom to be ſurveyed, and thoſe waſte grounds which were found proper for the improvement of wool, were turned into ſheep-walks, whereby his ſubjects have reaped great advantages. Beſides, they have great ſupplies of wool from other foreign parts, as well as from Great Britain and Ireland: from Turky they bring great quantities of the middling and ordinary ſorts of wool: from the gulph of Volo and the country thereabouts in Greece, they import ſeveral ſorts of wool, from 7 to 9 l. a pack: they have alſo large parcels of the inferior ſorts from many places in Barbary: they have great quantities from Bilboa and other parts of Spain: but the Portugal wool is ſhared between them and the Dutch; the beſt of which will make cloth of 6 or 7 s. a yard.

In this manner, France is become a kind of ſtaple for wool; and her woollen manufacturers working for one half, or two thirds of the wages paid to the Engliſh workmen, they are thereby enabled to ſell their manufactures exceeding cheap, and in great quantities, at all the foreign markets: therefore, France is become the greateſt rival that Great Britain ever yet contended with in the woollen manufacture: on which account, the utmoſt care, and greateſt application, is abſolutely neceſſary to ſupport this ſtaple manufacture of Great Britain.

But, the better to judge of the importance of this trade, we are told by ſeveral authors, that the value of the wool ſhorn in England amounts annually to 2,000,000 l. and that the manufacture thereof is computed at 6,000,000 l. the total being 8,000,000 l. and in 1699, the exported woollen goods amounted to 2,932,292 l. 7 s. 6 d.

Theſe are arguments which prove the neceſſity Great Britain is under of ſecuring this invaluable treaſure, and of removing every clog that reſtrains the exportation, or the conſumption of thoſe foreign commodities which are imported in return for the Britiſh woollen goods: for, as the French have long worked up their own wool, the Britiſh merchants who trade in woollen goods to Holland, Portugal, Spain, Italy, and Turky, have felt the continued ill effects of the French interfering with them in thoſe foreign markets; and it will be in vain for Britons to flatter themſelves, that the goodneſs of their manufactures will prevent the ſale of the French goods.

Sir

Sir Joſiah Child, in his diſcourſe of trade, obſerves, "That all our laws that oblige our people to the making of ſtrong, ſubſtantial, and as we call it, loyal cloth, if they were duly put in execution, would do more hurt than good; becauſe the humours and faſhions of the world change: and in ſome places, as now in moſt, ſlight, cheap, light cloth will ſell more plentifully and better than that which is heavier, ſtronger, and truer wrought: and if we intend to have the trade of the world, we muſt imitate the Dutch, who make the worſt, as well as the beſt, of all manufactures, that we may be in a capacity of ſerving all markets, and all humours."

It would certainly be worth the while of any gentleman to underſtand the whole progreſs of a manufacture, from its commencement to its conſumption; and how much it pays to the ſubſiſtence of the people; which may be perceived in the following inſtance, of 100 broad cloths ſent to Turky, and the returns of raw ſilk that are manufactured for home conſumption.

A clothier buys at market 50 packs of wool picked and ſorted, at 10 l. *per* pack -	l. 500	0	0
With which wool he makes 100 broad cloths; and the manufacture thereof in carding, ſpinning, weaving, milling, dreſſing, &c. as they are uſually brought to and ſold white at Blackwell-hall, will amount to about the firſt coſt of the wool -	500	0	0
So that theſe 100 cloths are ſold by the clothier to the merchant at 10 l. *per* cloth	1000	0	0
And the merchants pay for dying of the ſaid 100 cloths, one third part in grain colours, at 7 l. and two thirds in ordinary colours, at 30 s. *per* cloth - -	333	6	8
Alſo for ſetting, drawing, preſſing, packing, &c. 15 s. *per* cloth - -	75	0	0
The ſaid 100 cloths will coſt the merchant 14 l. 1 s. 8 d. *per* cloth on board, which amounts to - - -	1408	6	8
And to repay him their coſt and charges here, and their charges abroad, with a bare allowance for inſurance, and the intereſt of his money, they cannot purchaſe leſs than 22 great pounds of ſherbaffee, or Perſia fine raw ſilk, for every cloth. Thus he probably receives for the ſaid 100 cloths 2200 pounds weight of the ſaid raw ſilk -			
Now if the half part of this ſilk is wrought up into plain coloured tabbies, the manufacturers will receive 13 s. 7 d. *per* lb.	747	1	8
And if the other half part is wrought up into rich flowered ſilks brocaded, the manufacturers will receive 1 l. 19 s. 9 d. *per* lb.	2186	5	0
And the additional charge of dying, ſuppoſe but of one eighth part of the ſaid ſilk into grain colours, at 9 s. *per* lb. -	123	15	0
Then the coſt and charges of 100 woollen cloths ſhipped from London to Turkey, and the manufacture of the raw ſilk brought thence in returns thereof, muſt amount to	4465	8	4
The freight of the ſaid 100 cloths, and of the ſaid 2200 lb. of raw ſilk is computed at	40	12	6
The cuſtoms on the ſaid 2200 lb. of raw ſilk is - - - - -	156	15	0
Engliſh factors commiſſions abroad on the ſale of the cloth, and on inveſting the returns in ſilk as aforeſaid, computed at	100	0	0
It is here clearly repreſented to the view of every reader, that every 2200 lb. weight of raw ſilk imported from Turky, and manufactured here for our own conſumption, without paying any thing to the merchant's or the mercer's gain, pays to the landholders, the labourers, and the crown, the ſum of - - -	4762	15	0

This account takes the returns upon the 100 cloths exported to Turky, and makes them pay 5000 l. to the ſubſiſtence of the Britiſh workmen: but there have been annually exported from Great Britain two hundred times as many cloths for Turky; and the Britiſh merchants have received for about half that quantity of cloth the ſame kind of returns in raw ſilk for their own conſumption. See *Turky*, and *Perſia*.

An account of woollen manufactures ſhipped from England to Denmark, Norway, Sweden, the Eaſt country, Germany, Flanders, Portugal, Spain, the Streights, Italy, Turky, Jamaica, New England, New York, and the Weſt Indies.

The amount of the exportation of the woollen manufactures, to the ſeveral places abovemention'd, for the years 1709, 1710, 1711, 1712, 1713, and 1714.

Species of goods.	*From* 1709 *to* 1711.	*From* 1712 *to* 1714.
Bays -	127,492½	158,903½
Cloth of all ſorts	107,888	152,642
Cottons -	273,017	525,227
Kerſies -	59,884	83,110
Perpets and ſerges	8,250,805 lb.	8,643,505 lb.
Flannel -	990,451 yds.	1,213,949 yds.
Stockings -	81,472 doz.	96,939 doz.
Stuffs -	3,186,031 lb.	5,586,968 lb.
Says -	495,457 ditto.	619,262 ditto.
Northern dozen	19,385 ditto.	52,151 ditto.
Spaniſh wool brought into England.	13,986 bags	388 bags.

WOOL-*man*. A perſon who deals in wool.

WOOL-*mens company of London*, is of great antiquity, and probably coeval with the woollen trade of England; yet it is only a community by preſcription, and not by charter: however, it has the honour of being one of the city companies, by the title of The maſter, wardens, and aſſiſtants, of the fraternity or company of woolmen of the city of London: who conſiſt of a maſter, two wardens, and eleven aſſiſtants; but have neither livery nor hall to tranſact their affairs in.

WOOL-*ſtaple*, denotes a city or town, where wool is uſed to be ſold. See *Staple*.

WOOL-*ſted*. See *Worſted*.

WOOL-*winders*, are perſons employed in winding up fleeces of wool, into bundles, to be packed and ſold by weight: being ſworn to do it truly between the owner and the merchant.

WORK-*houſe*. A place where indigent, vagrant, and idle people are ſet to work, and maintained with cloathing and diet: ſuch as Bridewell, and many other places about the city and ſuburbs of London; particularly that in Biſhopgate-ſtreet for employing the poor children of the city and liberties, who have no ſettlement; and that of the pariſh of St. Margarets Weſtminſter, called the Grey coat-hoſpital.

At Amſterdam, they have a famous work-houſe, or houſe of correction, called the Raſphuyſe, which, by a privilege granted in 1602, has alone the right of ſhaving, and cutting the dyers woods, ſuch as, ſantal, brazil, campeche, and ſaſſafras. Each perſon tolerably ſtrong, kept in the houſe, is obliged to furniſh 150 pounds of this raſped *per* day, and the weaker a certain quantity of chips.

To WORM *a cable*, or *hawſer*, in the ſea phraſe, ſignifies to ſtrengthen it, by winding a ſmall line, or rope all along between the ſtrands.

WORM-*ſeed*, *Semen contra*, *Semen Sanctum*, or *Semen Santonicum*, is a hot, bitter, drying kind of ſeed, proper to deſtroy worms generated in a human body, particularly in children.

This ſeed is ſmall, of a browniſh colour, an oblong figure, a bitter taſte, and a ſtrong ſmell; which ſhould be choſen new, greeniſh, of a ſharp bitter aromatic taſte, and not a little diſagreeable.

The place where it is produced is Perſia, about the frontiers of Muſcovy: from whence it is brought to Aleppo; and naturaliſts are not agreed about the plant that produces it. J. Bauhine has a large diſſertation on the ſubject: ſome will have it to be a ſpecies of abſynthium, or wormwood, called *marinum abſynthium*; others will have it the tanacetum; and others the abrotanum.

M. Tournefort gives the following account of this drug, in

in the ſecond volume of his travels. The ſementine, or worm-powder, is not gathered like our ſeeds: the plant growing in the meadows, muſt be ſuffered to ripen; and the miſchief is, that as it grows near to maturity, the wind ſcatters a good part of it among the graſs, where it is loſt; and this makes it ſo dear.

As they dare not touch it with the hand, for fear of making it ſpoil the ſooner; when they would gather what is left in the ear, they have recourſe to this expedient. They take two hand baſkets, and walking along the meadows ſweep the baſkets, the one from the right to the left; the other from the left to the right, as if they were mowing, by which means the ſeed is ſhook out into the baſkets.

WORMWOOD. A medicinal herb among phyſicians, called *abſynthium*.

WORSTED, or *Woolſted*, in matters of commerce and manufacture, is a kind of woollen thread. See *Wool*.

Worſted is properly a thread ſpun of wool that has been combed, and in the ſpinning is twiſted harder than ordinary: which is chiefly uſed to be knit, or wove into ſtockings, caps, gloves, or the like.

The name worſted is ſuppoſed to be borrowed from a town of that name in Norfolk, remarkable for fine ſpinning: and they who write it Woolſted, do it on ſuppoſition of the word's being formed from wool, the matter of this thread.

WOVEN. Any thing that is manufactured by a weaver.

WOULD, or *Weld*, among dyers. See *Weld*.

WOULDING. A ſea term, for the winding of ropes, firſt round about the yard, or maſt of a ſhip, after it has been ſtrengthned by ſome piece of timber nailed thereto.

WRECK, or *Sea-wreck*, in natural hiſtory, a kind of herb growing in the ſea, upon rocks, which the waves tear off and caſt upon the ſhore. In ſome places it is uſed to manure the ground: in Normandy, and other parts, they burn it; producing a kind of ſoda of the aſhes, which they uſe in the making of common green glaſs, to promote the fuſion or vitrification of the other materials. See *Glaſs*.

WRECK, called alſo *Ship-wreck*, or *Ship-wrack*, in law, is when a ſhip periſhes in the ſea, and no man eſcapes alive out of it.

In ſeveral charters and old writings, it appears that wreck anciently, not only comprehended goods which came from a periſhing ſhip; but whatever elſe the ſea caſt upon land; whether it were precious ſtones, fiſhes, ſea-weed, or the like.

Or wreck is, where a ſhip is broke to pieces, or loſt on the ſea; ſignifying in the Engliſh law, ſuch goods, as, after a ſhipwreck, are caſt upon the land by the ſea, and left there within ſome county; for they are not wrecks ſo long as they remain at ſea, in the juriſdiction of the admiralty.

It is obſerved, in matters of wreck, that there is a kind of contract between the perſons who have loſt their goods by ſuch misfortune, and the perſons upon whoſe lands the goods and merchandiſe are driven, that the ſame be reſtored to them, or thoſe that claim under them: therefore, by the civil law, no man is to meddle with ſuch goods as are wrecked, nor are they to be ſeiſed by the king, or any other, by virtue of his grant or royal privilege; for ſuch goods, being caſt on land, and recovered out of the ſea, remain ſtill his who was the firſt owner thereof, and are to go to him or his ſucceſſor; or if it is proved that any thing is ſtolen out of the wreck, the takers are to be deemed robbers.

Here we find what is worthy to be followed and imitated in all trading countries; and the reaſon why theſe laws were ſo ſtrictly declared by the Romans, was becauſe, by the Rhodian law, if any ſhip had become wreck, though all the perſons were ſaved and alive, yet the ſhip and goods became ſeiſable by the lords: but this being a barbarous and inhuman cuſtom, it was afterwards repealed and abrogated by the emperors. The ſame iniquitous cuſtom was alſo firſt aboliſhed in England by the naval laws of Oleron, which provided in ſuch misfortune, that if the merchant or mariners, or any of them come ſafe to land, it was not to be accounted wreck.

And the emperor Conſtantine the great ſays, if any ſhip, at any time, by any ſhipwreck, is driven to the ſhore, or touch at any land, let the owner have it, and let not my exchequer meddle with it; for what right have I in the calamity of another man, that I ſhould hunt after gain in ſuch a miſerable caſe?

By the laws of Oleron, a proper regulation was made for the ſafety of a ſhip or veſſel arriving at any place, and making in towards a port or harbour, if ſhe ſet out her flag, or give any other ſign to have a pilot come on board, or a boat to tow her into the harbour, the wind or tide being contrary; reciting, that it was the cauſe of an unreaſonable and accurſed cuſtom in ſome places, that the third or fourth part of the ſhips that are loſt and become wrecks, ſhall accrue to the lord of the place where ſuch ſad caſualties happen; as alſo the like proportion to the ſavers, and only the remainder to the merchant, maſter, and mariners: therefore, the perſons agreeing for the pilotage of the ſaid veſſel, to ingratiate themſelves with their lords, and gain a part of the ſhip and lading, like faithleſs and treacherous villains, ſometimes even willingly and out of deſign to ruin ſhip and goods, guide and bring her upon the rocks; and then, feigning to aid and aſſiſt the diſtreſſed mariners, are the firſt in pulling the ſhip to pieces, purloining and carrying away the lading thereof, contrary to all law and reaſon; and afterwards, that they may be the more welcome to the lord, with all ſpeed poſt to his houſe with the ſaid narrative of this unhappy diſaſter; whereupon the ſaid lord, with his retinue, appearing at the place, take their ſhare, the ſavers theirs, and what remains the merchant and mariners may have. Now ſeeeing all this is againſt the law of God, it is hereby ordained, that the ſaid lord of the place and ſalvers, and all others that take away any of the ſaid goods, ſhall be excommunicated, and puniſhed as thieves and robbers; but the falſe and treacherous pilots, ſhall be condemned to ſuffer a moſt rigorous and unmerciful death; and high gibbets ſhall be erected for them in the ſame place, or as near as may be, where they guided and brought any ſhip to ruin as aforeſaid, and thereon they ſhall with ſhame and ignominy end their days; which gibbets are to abide and remain to ſucceeding time on that place, as a caution to other ſhips that ſhall afterwards ſail thereby. And if the lord of any place be ſo barbarous, as not only to permit ſuch inhuman people, but alſo to maintain and aſſiſt them in ſuch villanies, that he may have a ſhare in ſuch wrecks, the ſaid lord ſhall be apprehended, and all his goods confiſcated and ſold, in order to make reſtitution to ſuch as of right it appertains; and himſelf ſhall be faſtened to a poſt or ſtake, in the midſt of his own manſion-houſe, which being fired at the four corners thereof, all ſhall be burnt together; and the walls ſhall be demoliſhed, the ſtones pulled down, and the place converted into a market-place, for the ſale only of hogs and ſwine to all poſterity.

Theſe two articles of the laws of Oleron are here inſerted at length, on account of the great and juſt ſpirit of them; and this barbarity is now rarely uſed in any nation in Europe, unleſs it is againſt the enemies of the ſtate, infidels, or pirates: but that which the common people practiſe upon the Engliſh coaſts, when a ſhip is unfortunately driven to land, before any aſſiſtance comes, is too much like it, and ought to be made a capital offence.

And by the ſame laws, if any ſhip ſailing to and fro, and coaſting the ſeas, as well in the way of merchandiſe, as otherwiſe, happen by misfortune, through the badneſs of the weather to ſtrike againſt any rocks, whereby ſhe is ſo broken that ſhe periſhes upon that coaſt or country; and the maſter, mariners, merchants, or any of thoſe ſhall eſcape, and come ſafe to land; in this caſe the lords of that place or country, where ſuch misfortune happens, ſhall not hinder or oppoſe ſuch that have ſo eſcaped, or them to whom the ſaid ſhip or veſſel and her lading belong, in uſing their utmoſt endeavours for preſervation of as much thereof as may poſſibly be ſaved: but, on the contrary, ſhall be aiding and aſſiſting to the diſtreſſed mariners or merchants, in ſaving their ſhipwrecked goods; and that without the leaſt embezzlement, or taking any part thereof from the right owners: and in caſe any ſhall act contrary hereunto, or take any part of the ſaid goods from the diſtreſſed, ruined, and undone ſhipwrecked perſons,

ſons, againſt their wills, except for ſalvage as juſtice ſhall appoint, they ſhall receive the puniſhment of thieves, if ſpeedy reſtitution is not made by them; nor ſhall any cuſtom protect them againſt the penalties in the twenty-ſixth article of the laws.

And where a ſhip, or other veſſel, entering into harbour, happens to be broken and periſh, and the maſter and mariners which were on board her be all drowned; if the goods belonging to the ſhip be driven aſhore, or remain floating on the ſea, without being ſought after by the owners thereof, they being ignorant of the ſad diſaſter; in this lamentable caſe, the lord of that country ought to ſend perſons to ſave the ſaid goods, which he ſhall put into ſafe cuſtody, and give notice thereof to the relations of the deceaſed perſons, and ſhall out of the goods ſatisfy for ſaving them, according to the hazards run, and the pains therein taken, and then the remainder muſt be ſecured and kept for one year or more: and if in that time they, to whom the ſaid goods appertain, do not appear and make their claims thereto, the ſaid year being fully expired, the lord may publickly ſell and diſpoſe thereof to ſuch perſons as will give moſt for the ſame; and the money ariſing from ſuch ſale he ſhall give among the poor, and to other charitable uſes: but if he aſſumes the ſaid goods, in the whole or in part to himſelf, he ſhall incur the pains and penalties aforeſaid, unleſs he make ſatisfaction.

There are ſeveral other excellent proviſions in the laws of Oleron, to ſecure ſhipwrecked goods to the diſtreſſed owners. By other ſea laws and ordinances, if any man ſhall prevent aſſiſtance to ſhipwrecked perſons, he ſhall be puniſhed as a murderer: and the like puniſhment has been ordained for thoſe who ſhall, by treachery, put forth any light, with intention to ſubject them to danger or ſhipwreck; whence it is that fiſhermen are forbidden to fiſh with lights in the night. By the laws of France, ſuch as, during the night, light falſe fires upon the ſhore in dangerous places, to decoy thither, and occaſion the loſs of ſhips, ſhall be put to death, and their bodies hung upon a maſt, which ſhall be ſet up on the place where the fires were made.

By the Rhodian laws, if a ſhip and goods periſh in the ſea, and the owners abandon her, ſo that ſhe becomes a mere derelict; in ſuch caſe, the firſt perſon that takes poſſeſſion of her, and recovers any part of her lading, gains a property therein by the laws of nations. And where any ſuch wreck happens, by any fault or negligence in the maſter or mariners, the maſter muſt make good the loſs: but if the ſame was occaſioned by the act of God, or done to avoid an enemy, or pirate, there he ſhall be excuſed. The maſter, &c. ſhall ſuſtain the damage, where he or any of his mariners lie aſhore, and the ſhip periſhes during their abſence, whether by night or by day, &c.

By the French laws, all ſhips and perſons belonging to them that ſhall be caſt aſhore by tempeſt, or otherwiſe, upon the coaſts of that kingdom, and every thing that has eſcaped ſhipwreck, is declared to be taken into the protection of the king: and all ſubjects are enjoined, not only to do their utmoſt endeavours to ſuccour all perſons in danger of ſhipwreck; but alſo, till the arrival of the officers of the admiralty, to ſave the ſhipwrecked goods, and prevent their being rifled, under pain of being anſwerable for all loſſes and damages, of which they ſhall not be excuſed, without producing thoſe that are guilty: and ſuch as make any attempt upon the lives or goods of ſhipwrecked perſons, ſhall be puniſhed with death; without any poſſibility of a pardon.

In ancient times, all wrecks in England belonged to the crown; and where a ſhip periſhes at ſea, and no man eſcapes out of it, the wrecked goods being brought to land by the waves, by the common law belong to the king by his prerogative, or to the lord of the manor: and the ſtatute *de prærogativa regis*, 17 Edw. II. ordains, that the king ſhall have wreck of the ſea, whales and great ſturgeons taken in the ſea, and elſewhere, throughout the realm, except in places privileged. But it was formerly uſual to ſeize wrecks as forfeited to the king, only when no owner could be found; for in ſuch caſe it muſt of conſequence belong to him, as lord of the narrow ſeas, which he is obliged to ſcower of pirates, &c. and the product of wrecks was ordained to contribute to the charge.

And by the ſtatute of 3d Edw. I. cap. 4. called the ſtatute of Weſtminſter the firſt, it is enacted, that where a man, dog, or cat, eſcapes alive out of the ſhip, neither the ſhip nor any thing therein ſhall be adjudged a wreck; but the goods ſhall be ſaved and kept by the ſheriff, coroners, or king's bailiffs, and delivered to the inhabitants of the town where they are found; ſo that if any perſon, within a year and a day, ſue or apply for thoſe goods, and prove that they were his property at the time of the ſhipwreck, they ſhall be reſtored to him without delay: but if not, then they ſhall be ſeized by the ſaid ſheriffs, coroners, or bailiffs, for the king's uſe, and ſhall be delivered to the inhabitants of the town or place, who ſhall anſwer before the juſtices for the wreck belonging to the king. Alſo, where the wreck belongs to another, he ſhall have the ſame in like manner; and if any one be convicted to have done otherwiſe, he ſhall ſuffer impriſonment, make fine to the king, and likewiſe yield damages: and bailiffs to lords acting contrary, ſhall anſwer for it, if they have wherewith to do it; and if they have not, the lord ſhall deliver his bailiff's body to the king to be anſwerable.

The owners claiming a wreck, muſt make ſufficient proof of their title within the year and day; and they are to do it by their marks or cockets, by the cuſtom-houſe books, or the teſtimony of reputable men; and if the wreck be taken by the king, or ſeized by perſons having no authority, the owner may have a commiſſion to inquire, and hear and determine it by the oaths of twelve men; or he may bring an action at law, and make his proof by verdict. The year and day ſhall be accounted from the ſeiſure; and if the owner of the goods dies within the year, his executors or adminiſtrators may make proof: and when ſuch goods wrecked are periſhable, the ſheriff may ſell them within the year, and the ſale ſhall be good; but he muſt diſpoſe of them to the beſt advantage, and account with the owners.

If a ſhip is ready to ſink at ſea, and all the men therein, for preſervation of their lives, quit the ſhip, and afterwards ſhe periſhes; if any of the men are ſaved, the goods ſhall not be loſt. A ſhip on the ſea was chaſed by an enemy; the men in it, for the ſecurity of their lives, quitted the ſhip, which was taken by the enemy, and ſpoiled of her goods and tackle, and then turned to ſea: after this, by ſtreſs of weather ſhe was caſt on land, where it happened her men ſafely arrived: it was reſolved that the ſhip was no wreck by the law of England.

Where goods are wrecked on ſhore, and the lord having power takes them, he ſhall not pay cuſtom, neither by the common law, nor by the ſtatute law; for, at the common law, ſhipwrecked goods could not be charged with cuſtoms, by reaſon the wreck was wholly the king's, and he could not have a cuſtom of what was all his own: and wines, or other goods, coming or brought into the kingdom by wreck, are not imported by any body, but by the wind and ſea; nor can ſuch wrecked goods ſo caſt aſhore, be ſaid to be brought into the kingdom as merchandiſe, for ſale.

If a man has a grant of wreck, and goods are wrecked upon his lands, and another takes them away before ſeizure, he ſhall have an action of treſpaſs, &c. to recover them; and before they are ſeized, there is no property gained, to make it felony. 1 Hawk. 94. In caſe a perſon loſes his goods at ſea, by piracy or tempeſt, and not by wreck; if they afterwards come to land, and he can make proof that they are his goods, they are to be reſtored by the king's officers, or the lords there.

Flotſam, jetſam, and lagan, are in general, goods on or in the ſea, and belong to the king, who by charter has granted them to the lord admiral. In particular, flotſam, is when a ſhip is ſunk or otherwiſe caſt away, and the goods float upon the ſea. Jetſam, is where the ſhip is in danger of ſinking, and for lightening the ſhip, the goods are thrown into the ſea; but notwithanding the ſhip periſhes. Lagan, is when heavy goods that ſink are caſt into the ſea, before the periſhing of the ſhip;

and the maſter and mariners, that they may find and have them again, faſten a buoy cork, or other ſea mark to them, whereby they may be more eaſily directed to the place where they lie, if they ſhall be in a condition to retake them.

A man may have flotſam and jetſam by the king's grant, and may have lagan, within the high and low water mark, by preſcription, as it appears in the weſt country, where the lords of manors preſcribe to have wreck in the ſea ſo far as they can ſee a humber barrel. And by the grant of wreck will paſs flotſam, jetſam, and lagan, when they are caſt upon land; for then they are a wreck, and belong to the lord entitled to the ſame. But if they are not caſt on the land, the admiral has the juriſdiction, and ſhall have them; for they cannot be ſaid to be a wreck.

The king, or admiral, ſhall have flotſam, jetſam, and lagan, when the ſhip periſhes, and when the owners of the goods are not known; but if the ſhip does not periſh it is otherwiſe. And it is held, that where the proprietors of the goods may be known they have a year and a day to claim flotſam.

The ſtatute of 12th Anne, cap. 18. has ordained, that the ſheriffs and juſtices of peace of every county, or of a city or town, and all mayors, bailiffs, and other head officers of corporations and port-towns near adjoining to the ſea; and all conſtables, tithingmen, and officers of the cuſtoms in all ſuch places, upon application to them made on behalf of any commander of a ſhip in danger of being ſtranded or run on ſhore, ſhall command the conſtables near the ſea-coaſt, where ſuch ſhip ſhall be in danger, to call together as many men as ſhall be neceſſary, to the aſſiſtance and for the preſervation of ſuch ſhip; and if there ſhall be any ſhips of war, or other ſhips lying at anchor near the place, the officers of the cuſtoms, and conſtables, &c. are to require the aſſiſtance of the ſuperior officers, by their boats, and what hands they can ſpare: and if ſuch officers ſhall refuſe or neglect to aſſiſt, they ſhall be liable to the penalty of 100 l. to be recovered by the chief officer of the ſhip in diſtreſs.

No perſons ſhall enter into ſuch ſhips in diſtreſs, without leave from the commander, or a conſtable, &c. And the maſters and conſtables may by force repel perſons, who ſhall preſs on board the ſaid ſhips without leave: and if any goods are carried off from any ſuch ſhip, and found on any perſon, if they are not delivered to the owner on demand, ſuch perſon ſhall pay treble the value of the goods, recoverable by the owner in an action at law. Alſo if any officer of the cuſtoms, or his deputy, abuſe the truſt repoſed in him by this act, and ſhall be convicted thereof, he ſhall forfeit treble damages to the party grieved, and be incapable of any employment in the cuſtoms.

If any perſon make holes in the bottom, ſide, or in any part of a ſhip, or ſteal any pump, or do any thing tending to the loſs of the ſhip, he ſhall be guilty of felony. And, by this ſtatute, ſhips and goods are to be preſerved for the benefit of the owners, paying the ſalvage, &c. But this act ſhall not extend to deprive the crown, or any grantee of any right or claim to any wreck or goods that ſhall be jetſam, flotſam, or lagan.

By the ſtatute of the 4th of Geo. I. it was enacted, that the act of the 12th of Queen Anne ſhould not affect the ancient juriſdiction of the admiralty court of the cinque ports; but the officers of the ſaid court ſhould put the ſaid act in execution within their juriſdiction.

But theſe acts are certainly too inefficacious for the ſuppreſſion of thoſe violences, which are ſo frequently and inhumanly perpetrated by villainous miſcreants, on ſhipwrecked mariners: they are not ſufficiently reſtrictive on the reſpective counties, hundreds, and pariſhes, which may be done in the ſame manner as the proviſions againſt highway robbers; and, in ſuch ſimilar circumſtances, ſimilar methods ought to be taken, if they have any appearance of prevention or redreſs: neither are they properly penal, ſo as to deter theſe rapacious invaders of property from plundering the cargo, and murdering the mariners; which, there is reaſon to apprehend, is too frequently the caſe.

WRIT *of aſſiſtance*, that iſſuing out of the exchequer, to authoriſe ſome perſons to take a conſtable, or other public officer; to ſeize goods or merchandiſe prohibited, or uncuſtomed.

WRITER *of the tallies*. An officer of the exchequer, who is clerk to the auditor of the receipt, and writes upon the tallies the whole letters of the tellers bills.

WYCH *houſe*. A houſe wherein ſalt is boiled. See *Salt*.

X.

XAR

XACA. A port-town of Sicily, in the province of Mazara, ſituated in 13 deg. of E. lon. and 37 deg. 37 min. of N. lat. 40 miles S. of Palermo.

XALISCO. A city of Mexico, in America, ſituated in 110 deg. of W. lon. and 22 deg. 20 min. of N. lat. near the Pacific ocean.

XAN, is a term in ſome parts of the Ottoman empire, for what is elſewhere called caravanſera.

XARAFFES, is a term at Goa, and in all the towns of trade on the Malabar-coaſt of India, for a kind of brokers, who, for a ſmall profit, examine the ſilver coins, eſpecially the pardaos xeraphins, current in trade, of which the greateſt part are ſpurious and ſophiſticated.

Theſe xaraffes are Indian chriſtians, who poſt themſelves in the corners of ſtreets, and are ſo experienced in the knowledge of theſe pardaos, that, without weighing them, without uſing the touch-ſtone, or even without ringing them as in Europe, but only by the touch, and in counting them, they diſtinguiſh a falſe piece among a thouſand; which no European, not even the Dutch, could ever do, tho' they handle and turn them a thouſand times over.

Beſides this employment of the xaraffes, they change monies, and furniſh merchants with the coins they have

XYS

an occaſion for, contenting themſelves for all profits with a few tin baſarucos, 3 of which are worth 2 Portugueſe rees; 50 rees being worth about 3½ d. ſterling.

There are alſo ſome of thoſe xaraffes at Conſtantinople, Cairo, and other towns of trade in Turky.

XOLLO. See *Philippines*.

XUKAR. A river of Spain, which riſes in New Caſtile, and having run S. E. through that province, turns due E. and croſſing the province of Valencia, falls into the Mediterranean, 20 miles S. of the city of Valencia.

XYLO-*aloe*, in medicine, the lignum aloes; called alſo *agallochum*. See *Aloes*.

XYLO-*balſamum*. A name which naturaliſts give to the wood of the tree that yields the precious gum known by the balm of Gilead, or balſam of Mecca.

There are branches of this tree brought from Cairo; being very ſtreight, unequal, and full of knots; their bark reddiſh without, and greeniſh within. The wood is whitiſh, and full of pith; and when broke yields an agreeable ſmell, reſembling that of the balm; being reputed good to ſtrengthen the brain and ſtomach; as alſo to expel poiſon. But, as it is ſcarce, yellow ſaunders, or aloes-wood, is often ſubſtituted for it by apothecaries.

XYSTOS. A precious ſtone brought from India, of the jaſper kind. See *Jaſper*.

Y.

YAR

YACHT, or *Yatcht* a kind of veſſel uſed by the Engliſh, furniſhed with maſts and ſails, fit to go to ſea; and commodiouſly adorned within-ſide and without, for the accommodation of ſtate paſſengers; having one deck, carrying from 4 to 12 guns, with from 20 to 40 men; being of burthen frnm 30 to 160 ton. They draw little water, and are uſed for expedition, or making ſhort trips: their make and form being various.

There are about ſeven or eight yachts belonging to his Britannic Majeſty; and ſeveral of the nobility alſo have their yachts: but in Ireland there is only one yacht, which generally ſails from Dublin to Parkgate with ſtate paſſengers, or other perſons of diſtinction.

The Dutch have alſo yachts, but not ſo prepared to live at ſea; being chiefly uſed for ſailing on rivers and canals.

YARD. A long meaſure in England and Spain; uſed to meaſure cloth, ſilks, and ſtuffs. See *Meaſure*.

The Engliſh yard contains three feet, and was firſt ſettled by Henry I. from the length of his own arm; being juſt 7-9ths of the Paris ell; ſo that nine yards make ſeven ells.

Yards are converted into ells Flemiſh by adding a third part; into ells Engliſh by ſubtracting a fifth part; or, multiplying by 8, and caſting off the right-hand figure. Ells are converted into yards by adding a fourth. To turn ells Flemiſh into yards, ſubtract one quarter. The Spaniſh vara, or yard, chiefly uſed at Sevil, is in ſome places called barra, containing $\frac{17}{24}$ of the Paris ell; ſo that 17 ells make 24 Spaniſh yards.

YARDS, or *Sail-yards of a ſhip*, are long pieces of timber, tapering at each end, fitted acroſs the ſeveral maſts, to carry the ſails, which are faſtened to the yards at the heads, ſo as to be hoiſted up and let down together with them, with ropes called halliards.

The main-yard is that of the main-maſt; the mizen yard, and bolt-ſprit-yard, are thoſe of the mizen and bolt-ſprit.

There are ſeveral phraſes and words of command relating to the yard; as, *brace the yard*, which ſignifies to traverſe aft the yard-arm, whoſe brace is haled; ſo that to traverſe the yard is the ſame as to ſay *brace it aft*. *Square the yard*, is as much as to ſay, ſee that it hangs right acroſs the ſhip, and one yard-arm not traverſed more than the other. *Top the yards*, that is, make them hang even.

YARD-*arm*, is that half of the yard which is on either ſide the maſt, when it lies athwart the ſhip.

YARDS alſo denote places belonging to the Britiſh navy, where the ſhips of war are laid up in harbour. See *Navy*.

The king's yards are Chatham, Deptford, Woolwich, Portſmouth, Sheerneſs, Plymouth, and Harwich; each of which is provided with ſeveral docks, wharfs, launches, and graving places, for the building, repairing and cleanſing his Majeſty's ſhips.

In theſe yards are lodged great quantities of timber, planks, anchors, and the like: here are alſo ſtorehouſes, wherein are reſerved great quantities of cables, rigging, ſails, and blocks. In theſe ſeveral yards are likewiſe rope-yards, wherein all ſorts of cordage are made.

YARE, among ſailors, implies as much as nimble, ready, quick, or expeditious. Hence, to be yare at the helm, as ſome ſay, ſignifies to ſet a freſh man at the helm.

YARE. A river of Norfolk, which runs from W. to E.

YEL

through that county, paſſing by Norwich, and falling into the German ſea at Yarmouth.

YARMOUTH. A borough and port-town of Norfolk, ſituated on the German ſea, at the mouth of the river Yare, lying in 2 deg. of E. lon. and 52 deg. 45 min. of N. lat. 20 miles E. of Norwich.

YARMOUTH, is alſo a town of the Iſle of Wight in Hampſhire, ſituated on the N.-W. coaſt of the iſland, upon a creek, the entrance of which is about a mile below the town.

YARN. Any ſort of wool ſpun into thread: though it commonly means a coarſe ſort, whoſe thread is very large, and uſed to knit ſtockings, gloves, caps, and ſuch things, for the poorer ſort of people; the finer ſort being called worſted. See *Worſted*, and *Wool*.

Rope-YARN. See *Rope*.

YARRINGLES, or *Yarringle-blades*. A kind of reel, or inſtrument, with which hanks of yarn are wound on to clues or balls.

YATCH. See *Yacht*.

YAWL. A large boat, or ſmall veſſel, which ſhips carry to ſea, to ſend on ſhore, as occaſion and buſineſs require.

YAWS, in the ſea-language. A ſhip is ſaid to make yaws when, thro' the fault of him at the helm, ſhe is not kept ſteady in her courſe, but makes angles in and out. To prevent this the conner cries to him at the helm, *ſteady, ſteady*.

YCHITZEE. A medicinal drug found in China; being ſo much eſteemed by the Japaneſe, who purchaſe it at Canton, that it produces a profit of more than 600 *per cent*.

YEAR. That ſpace of time which the ſun is ſuppoſed to take up in his paſſage thro' the ſeveral ſigns of the Zodiac; which conſiſts of 12 unequal kalendar months, containing 365 days, and once in 4 years 366. See *Stile*.

YEARLING. A beaſt of about a year old; particularly ſpoken of young cattle.

YEAST. See *Yeſt*.

YELLOW. A bright colour, reflecting the moſt light of any, after white.

There are many yellow ſubſtances which become white, upon wetting and drying them again ſeveral times in the ſun; particularly hair, wax, and linen cloth.

The ſame bodies, if they are already white, and continue a long time in the air, without being wetted, turn yellow.

Paper and ivory applied near the fire, become ſucceſſively yellow, red, and black. Silk, when turned yellow, is whitened again with the fumes of ſulphur.

YELLOW, in dying, is one of the five ſimple or mother colours. See *Colour*, and *Dying*.

For the fineſt yellows, they firſt boil the cloth, or ſtuff, in allum, and pot-aſhes; then give the colour with the weld, or would.

Turmeric likewiſe gives a good yellow, tho' not the beſt. There is alſo an Indian wood that gives the yellow colour bordering upon gold. A fourth ſort of yellow is made with ſavory; but this is inferior to them all.

Greens are uſually made of yellow and blue mixed. With yellow, madder-red, and goats hair prepared with madder, are made the golden yellow, aurora, panſy, narcarate, iſabella, and chamois-colour; which are all caſts or ſhades of yellow.

Painters

Painters and enamellers make their yellow of maſſicat, which is ceruſs raiſed by the fire; or, with yellow ochre. Limners and illuminers make it with ſaffron, French-berries, and orcanette.

YELLOW-*honey*. See *Honey*.

YEST, or *Barm*. A head, or ſcum, riſing upon beer or ale, while working or fermenting in the vat; which is uſed for a leaven, or ferment, in the baking of bread; as ſerving to ſwell, or puff it up very conſiderably in a little time, and to make it much lighter, ſofter, and more delicate; but when there is too much of it, the bread is apt to be bitter.

The uſe of yeſt in bread is but of late ſtanding in England; it not being above a century ſince the avarice of the bakers firſt introduced it; and then it was only done by ſtealth, tho' Pliny affirms it was uſed by the ancient Gauls:

The faculty of medicine of Paris, by a decree of the 24th of March 1688, ſolemnly maintained it noxious to the health of the people; yet could not prevent its progreſs.

YERKER, in the exciſe-office, is a perſon who examines the officers books.

YONNE. A river of France, which riſes in Burgundy, and runs N. through Nivernois and Champagne; then, paſſing by Auxerre and Sens, falls into the river Seyne at Monterau ſur Yonne.

New-YORK *city*, is the capital of the province of New York, in North America, ſituated in 72 deg. 30 min. of W. lon. and 41 deg. of N. lat. on an iſland in the mouth of Hudſon's river. See *Britiſh* America.

YOUNKERS, among ſailors, are younger ſailors, otherwiſe called fore-maſt-men; whoſe buſineſs is to take in the top-ſails, furl the ſails, and ſling the yards.

YQUETAYA, in natural hiſtory, a plant in Brazil, long uſed as a medicine in that country; and lately diſcovered to the Europeans by a French ſurgeon.

It has been ſince found in France, where it has been cultivated, and examined by M. Marchant, appearing to be a kind of ſcrophulary or blood-nettle.

It has this remarkable property, that it takes away from ſenna all its ill taſte and ſmell; which property of correcting the infuſion of ſenna, was unknown in the ſcrophulary.

To uſe this plant, it muſt be dried 10 or 12 days in the ſhade, and afterwards expoſed to the ſun till quite dry.

YVICA. A Spaniſh iſland, the leaſt of the Baleares, lying in the Mediterranean, between the province of Valencia in Spain, and the iſland of Majorca, in 1 deg. of E. lon. and 39 deg. of N. lat. being about 30 miles long, and 24 broad. It is a mountainous barren country; but produces great quantities of ſalt.

YUNE. A liquid meaſure uſed at Wirtemberg; 16 of which make the awm, or 1-7th of an Engliſh ton. See *Awm*.

Z.

ZAN

ZAARA, or *Sarra*. One of the diviſions of Africa, ſituated under the tropic of Capricorn; bounded by Bildulgerid on the north; by the unknown parts of Africa on the eaſt; by Nigritia, or Negroland, on the ſouth; and by the Atlantic ocean on the weſt. It is a barren deſart, as the name ſignifies; and ſo deſtitute of water, that the caravans of camels, which paſs over it from Moroeco to traffic with Negroland, are half loaded with water and proviſions. As it produces ſcarce any thing to ſuſtain life, there are no towns in it; but a ſort of people like the Arabs, who live in tents; and, being acquainted with the few ſprings there are, wander from one part of the country to the other, as they expect to meet with water and food for their cattle. They are not black, but of an olive complexion; their language is Arabic; their religion Mahometaniſm; and they are ſuppoſed to be the deſcendants of thoſe Arabs who ſubdued Africa ſoon after the death of their prophet Mahomet.

ZABAC *ſea*. See *Meotis* Palus.

ZAEJIES. A ſmall ſilver coin current in Perſia; being the half of the mamoudi, or 4 d. ſterling.

ZAFFER, *Zaffre*, *Zafara*, or *Safree*. A mineral brought from the Eaſt Indies, particularly from Surat; of which there are two ſorts, the fine and the common: the former is in a blueiſh cineritious ſtone; and the latter is in a grey powder, like aſhes.

It is much uſed in enamelling, as alſo in the making of glaſs and porcelain, to give a blue colour.

Zaffer is now thought to be of ſuch uſe in England, that the ſociety for the encouragement of arts, manufactures, and commerce, whoſe office is in Craig's court, Charing-croſs, promiſed a premium, on the 16th of July 1755, of 30 l. for making the moſt and beſt zaffer and ſmalt from Engliſh cobalt, not leſs than 5 lb. weight of zaffer, and 15 lb. of ſmalt, to be produced on or before the 2d Wedneſday in January 1756, with ſatisfactory certificates.

ZAFREN. Any thing of a yellow colour; but chiefly applied to the plant called ſaffron. See *Saffron*.

ZAIN. A ſort of mineral, ranked among half metals. See *Zinck*.

ZANQUEBAR, or *Zanguebar*, is a country on the Eaſt coaſt of Africa, ſituated in the ſouthern latitude, between the equator and the tropic of Capricorn; being bounded by the country of Anian on the north; by the Indian ocean on the eaſt; by Caffraria on the ſouth; and by the unknown parts of Africa on the weſt; comprehending the provinces of Madagaſcar, Melinda, Quiloa, Mozambique, and Sofala.

The Portugueſe have ſeveral colonies and ſettlements along this coaſt; where they pretend to have made a great many proſelytes to Chriſtianity among the Negroes, and claim a kind of dominion over the petty princes of the country. They trade with the natives for gold, ſlaves, ivory, oſtrich feathers, wax, gum, grain, civet, ambergreaſe, aloes, ſenna, and other drugs: beſides which, the country produces rice, ſugar, and ſuch fruits as are uſually found between the tropics.

Melinda is the capital city of all the Portugueſe ſettlements; being ſituated in 39 deg. of E. lon. and 3 deg. of S. lat. on the Indian ocean, 70 miles N. of Mombaza. It is a large populous city; having 17 churches, and 9 convents; with ſeveral warehouſes. It has a good harbour, defended by a citadel; and the city, with the

ZES

little iſland on which it ſtands, is ſaid to contain 200,000 inhabitants; of whom a great part are Chriſtians, and the reſt Negroes, who have a king and a religion of their own; but all in ſome ſubjection to the Portugueſe.

The gold mines of Sofala produce annually to the amount of about 1,300,000 l. ſterling; which is divided between the Portugueſe and the Arabians.

ZANTE. An iſland of the Mediterranean, ſituated in 21 deg. 30 min. of E. lon. and 37 deg. 50 min. of N. lat. 12 miles W. of the Morea, and 14 S. of Cephalonia; being 12 miles long, and 24 broad. It is very conſiderable on account of the little grapes which it produces, called currants, or corinths; moſt of the countries of Europe being ſupplied with them from this iſland, which is ſubject to the Venetians, though moſt of the natives are Greeks. See Venice, under *Italy*.

ZARA. A city of Dalmatia, ſituated in 17 deg. of E. lon. and 44 deg. of N. lat. on the gulph of Venice, 60 miles N. W. of Spalatto; ſurrounded by the ſea, and ſubject to Venice.

ZATOU. A meaſure for rice, uſed by the natives of the iſland of Madagaſcar, containing about 50 lb. avoirdupois.

ZEALAND, or *Zeland*. The chief of the Daniſh iſlands, ſituated at the entrance of the Baltic ſea; being about 200 miles in circumference; and having upon it the city of Copenhagen, which is the capital of Denmark. See *Denmark*.

ZEALAND, is alſo one of the ſeven United Provinces, conſiſting of eight iſlands, that lie at the mouth of the Scheld; the chief of which is Walcheren, whereon the city of Middleburg is ſituated. See *United* Provinces.

ZEDOARY. A medicinal root, belonging to a plant growing in the Eaſt Indies, whoſe leaves are like thoſe of ginger, only longer and broader; being of an aſh-colour, with an aromatic bitteriſh taſte, and is ranked in the claſs of cephalics: but it is alſo reckoned by many among the alexipharmics, and is even ſaid to prevent infections, by holding it only in the mouth.

It is alſo preſcribed among ſtomachics, on account of its agreeable bitter; and, for its ſpicy warmth, is recommended in cholics, hyſterical affections, and for promoting the menſes.

ZENITH, in aſtronomy, the vertical point; or a point in the heavens directly over our head.

Or the zenith is a point, in the ſurface of the ſphere, from which a right line, drawn thro' the ſpectator's head, paſſes thro' the centre of the earth. Hence, there are as many zeniths as there are different places on the earth, where the heavens may be ſeen; and upon changing our place we alſo change the zenith.

The zenith is alſo called the pole of the horizon; becauſe it is 90 degrees diſtant from each point thereof.

It is alſo the pole of all the almucantars, or parallels of horizon, whereby the altitude of the ſtars is eſtimated.

Through the zenith paſs the vertical circles, or azimuths: the point diametrically oppoſite to the zenith being called the nadir, which is the point directly under our feet, and is the zenith to our antipodes, as our zenith is the nadir to them. See *Antipodes*.

ZER. A general name in Perſia for all ſorts of coins.

ZEST. The woody thick ſkin quartering the kernel of a walnut; which ſome phyſicians preſcribe, when dried, to be taken with white wine, as a remedy againſt the gravel. The word is alſo uſed for a chip of orange or lemon-

lemon-peel; ſuch as is uſually ſqueezed into ale or wine, to give it a flavour. Hence to zeſt an orange, or lemon, among confectioners, is to cut the peel from top to bottom into ſmall ſlips, as thin as poſſible.

ZIA. See *Turkiſh* Iſlands.

ZIAN. A ſilver coin of Amadabat, in India, and current in ſome other parts of the Mogul's territories; being about 2 s. 10 d. ſterling.

ZIBETHUM, in natural hiſtory, civet; being a perfume like muſk, contained in a kernelly bladder, in the groin of a civet-cat. See *Civet*.

ZIM. A Perſian word, ſignifying ſilver, conſidered as a metal.

ZIMBI. A kind of ſhell uſed for ſmall money, on ſome of the African coaſts; particularly at Angola, and in the kingdom of Congo; 2000 making what the Negroes call a macoute. See *Macoute*.

ZIMMER. A Ruſſian term, uſed in the fur-trade, ſignifying 10 pair of ſkins: thus a zimmer of ſables conſiſts of 20 ſkins.

ZINGI. A kind of almond, growing in the Eaſt Indies, and reſembling a ſtar in form; being compoſed of ſeven kinds of oblong and triangular nuts, diſpoſed circularly. Its rind is hard, rough, and black. The almonds are ſmooth and ſhining; like flax-ſeed in colour; with the ſmell and taſte of aniſeed; from whence it is ſometimes called the Indian aniſe. The Chineſe make uſe of this fruit for the preparation of their tea and ſherbet.

ZINK, or *Zinothum*. A kind of metalline ſubſtance, very hard, white, and brilliant; which is not ductile enough to denominate it a metal, but ſtretches a little under the hammer; being the ſame with what is otherwiſe called *ſpelter*, and uſed to purge and purify tin; much in the ſame manner as lead is uſed to purify gold, ſilver, and copper. See *Spelter*, and *Lead*.

Founders and toymen uſe it with turmeric, to tinge copper: for it gives a fine gold colour, though not very laſting.

M. Homberg conjectures, with a good deal of probability, that zink is no other than a natural mixture of two real metals, tin, and iron. What led him him to the opinion was, that zink yields preciſely the ſame fumes by the burning-glaſs as ſuch a mixture does. Accordingly, he aſſures us, he often ſubſtituted the one for the other, and this always with the very ſame effect.

Mr. Stahl ſays, it is extracted from a kind of the lapis calaminaris, and from the lead ore of Goſlar, in the duchy of Brunſwick in Germany.

ZINZIBER, or *Zingiber*. See *Ginger*.

ZIZYPHA, or *Zizyphus*. A name ſometimes given to a kind of fruit, more uſually called jujubs. See *Jujubs*.

ZOCOTORA, or *Socotora*. An iſland of the Indian ocean, ſituated 120 miles N. E. of cape Gardefoy in Africa, in 53 deg. of E. lon. and 11 deg. 30 min. of N. lat. being about 70 miles long, and 50 broad. The natives are a mixture of mahometans and pagans; who are ſometimes frequented by ſuch ſhips as are bound to India.

The Portugueſe were the firſt Europeans who had a knowledge of this iſland, and began to trade there in 1507; being the only nation which enjoyed this commerce for a conſiderable time: but at preſent all European nations eſtabliſhed in the Eaſt Indies, trade or touch there for refreſhments in going to or coming from Mocha.

Beſides good proviſions, the iſland alſo affords aloes, ambergreaſe, indigo, civet, frankincenſe, dragon's blood, and other medicinal gums; as alſo rice, tobacco, and dates: but the aloes, indigo, and civet, are reſerved for the king; and the trade for the reſt is free to every one.

The aloes of Zocotara have the reputation of being the moſt excellent in the world; and therefore European druggiſts give the name of aloes zocotrine to that of the beſt quality they have in their ſhops. The inhabitants of the iſland gather it in the bladders of ſeveral animals; or in goat-ſkins dried in the ſun; in which manner the real zocotrine is brought into Europe.

The dates, which are on this iſland in abundance, make one of the principal objects of its trade; and the iſlanders uſe it inſtead of bread, after having reduced it into a kind of paſte.

Commerce is apparently carried on in this iſland with much fidelity and candour; but, as the inhabitants diſtruſt all other nations with whom they trade, they ſhould have as little confidence placed in them; it being uſual with them to ſophiſticate the greater part of their merchandiſe, unleſs the Europeans are very cautious in their tranſactions.

ZODIAC, in aſtronomy, a broad circle, whoſe middle is the ecliptic, and its extremes two circles parallel thereto, at ſuch diſtance from it as to comprehend the excurſions of the ſun and planets.

The ſun never deviates from the middle of the zodiac, that is, from the ecliptic, which the planets all do more or leſs. The greateſt deviations, called latitudes, are the meaſure of the breadths of the zodiac.

The zodiac, cutting the equator obliquely, makes an angle therewith, of 23 degrees and a half; or more preciſely, of 23 deg. 29 min. which is called the obliquity of the zodiac, and is the greateſt declination of the ſun.

The zodiac is divided into twelve portions, called ſigns, and thoſe diviſions are denominated from the conſtellations which anciently poſſeſſed each part. But, the zodiac being immoveable, and the ſtars having got a motion from weſt to eaſt, thoſe conſtellations no longer correſpond to their proper ſigns; whence ariſes what is called the preceſſion of the equinoxes.

When a ſtar, therefore, is ſaid to be in ſuch a ſign of the zodiac, it is not to be underſtood of that ſign or conſtellation of the firmament, but only of that twelfth part of the zodiac, or dodecatemory thereof.

ZOLEDENIC, is the 96th part of the Ruſſian pound; uſed only by retailers.

ZONE, in geography and aſtronomy, a diviſion of the terraqueous globe, with reſpect to the different degrees of heat found in the different parts thereof; being the fifth part of the ſurface of the earth, contained between two parallels.

The zones are denominated torrid, frigid, and temperate.

Torrid-ZONE, is a faſcia, or band ſurrounding the terraqueous globe, and terminated by two tropics: its breadth being 46 deg. 58 min. The equator running through the middle of it, divides it into two equal parts, each containing 23 deg. 29 min. but the ancients imagined the torrid zone uninhabitable.

Temperate-ZONES, are two faſciæ, or bands environing the globe, and contained between the tropics and the polar circles; each being 43 deg. 2 min. in breadth.

Frigid-ZONES, are ſegments of the ſurface of the earth; the one being terminated by the antarctic, and the other by the arctic circle; the breadth of each being 46 deg. 58 min.

The difference of zone is attended with a great diverſity of phænomena. 1. In the torrid zone the ſun paſſes through the zenith twice a year; and his receſs from the equator towards the pole, which is above the horizon, is twice a year equal to the heighth of the pole. 2. In the temperate and frigid zones, the leaſt height of the pole exceeds the greateſt diſtance of the ſun from the equator; and therefore, to the inhabitants thereof, the ſun never paſſes thro' the zenith; yet, if on the ſame day the ſun riſes at the ſame time to a greater heighth, the heighth of the pole is the leſs, in regard the inclination of the circles of the diurnal revolution to the horizon is leſs. 3. In the temperate and torrid zones, the ſun riſes and ſets every natural day, by reaſon the diſtance of the ſun from the pole always exceeds the height of the pole; yet every where but under the equator, the artificial days are unequal, and the inequality is the greater, as the place is leſs diſtant from the frigid zone. 4. Where the temperate zones terminate on the frigid, the heighth of the pole is equal to the diſtance of the ſun from the pole, when in the neighbouring tropic; and, conſequently, once a year, the ſun, in its diurnal motion, performs an intire revolution, without going down under the horizon. 5. Every where in a frigid zone, the height of the pole is greater than the leaſt diſtance of the ſun from the pole,

and

and therefore, during ſome revolutions of the earth, the ſun is at a diſtance from the pole leſs than the pole's heighth; and during all that time does not ſet, nor ſo much as touch the horizon. Where the diſtance of the pole, as the ſun recedes from it, exceeds the heighth of the pole or latitude of the place, the ſun riſes or ſets every natural day.

ZONNAR. A kind of belt, or girdle, of black leather, that the Chriſtians and Jews of the Levant, particularly thoſe in the territories of the Grand Signior, are obliged to wear, to diſtinguiſh them from the Mahometans; which was enjoined them by Motavakkel X. kalif of the family of the Abaſſides, in the year of the Hegira 235. Hence, as moſt of the Chriſtians of Syria and Meſopotamia, are either Neſtorians or Jacobites, thoſe ſectaries are often called Chriſtians of the girdle.

ZOOPHYTON, in natural hiſtory, a kind of intermediate body, partaking both of the nature of a ſenſitive and vegetable; ſuch is the planta pudica commonly ſuppoſed to be, tho' with little foundation: but the ancients alſo reputed ſponges to be zoophytes.

ZOPYSA. Naval pitch; or a kind of mixture of pitch and tar, ſcraped off ſhips that have been a long time at ſea. See *Pitch*, and *Tar*.

This matter, by being gradually penetrated by the ſalt of the ſea, partakes of its qualities; and, being applied to the body externally, is found reſolutive and deſiccative.

ZURICH. A city of Switzerland, being the capital of the canton of Zurich, ſituated in 8 deg. 30 min. of E. lon. and 47 deg. 52 min. of N. lat.

ZURICH *lake*, is 24 miles long and 3 broad; by which the citizens of Zurich have an opportunity of importing and exporting their merchandiſe, becauſe the lake has a communication with the river Rhine.

ZUYDERSEE, or *Zuider ſea*, is a great bay of the German ocean, in the middle of the United Provinces; having the iſlands of Texel, Flie, and Schelling, at the entrance of it, on the north; the provinces of Frieſland, Overyſſel, and Guelderland, on the eaſt; Utrecht, and a part of Holland, on the ſouth; and another part of Holland on the weſt. There are ſeveral port-towns in this bay; but Amſterdam is the moſt conſiderable, whoſe foreign trade is equal to that of any town in the world; though the Zuider ſea is ſo ſhallow, that the Dutch flat-bottomed veſſels paſs over it with great difficulty.

ZZ. A character among the ancient phyſicians for myrrh; but uſed by the moderns for ginger.

THE END.

1 N 64
